**The Cambridge History of Science: Volume 4, Eighteenth-Century Science** David C. Lindberg,Roy Porter,Ronald L. Numbers,2003-03-17 The fullest and most complete survey of the development of science in the eighteenth century

*Cabinets of Experimental Philosophy in Eighteenth-Century Europe* ,2013-06-17 Cabinets of Experimental Philosophy in Eighteenth Century Europe is an ambitious contribution to the growing interest in how science came to engage the attention of a public outside the academic and professional spheres and how collections of instruments played a formative role in this development Collections of physical instruments for research and demonstration appeared throughout Europe in the eighteenth century and the coverage of the book is correspondingly broad While collections in different cultural and geographical locations had much in common there were significant local modifications The essays in this book illustrate how science sometimes thought to be monolithic and universal can maintain core intellectual characteristics and practical techniques while adapting to particular sites and circumstances Contributors include Jim Bennett Sofia Talas Huib J Zuidervaart Hans Hooijmaijers Ad Maas Tiemen Cocquyt Inga Elmqvist S derlund Paola Bertucci Marta C Louren o David Felismino Ivano Dal Prete Ewa Wyka Martin Weiss and Paolo Brenni      **A History of Science in the Netherlands** Klaas van Berkel,Albert van Helden,L.C. Palm,2023-07-03 In the 400 years of its modern history the Netherlands has produced a distinguished array of eminent mathematicians scientists and medical researchers including many Nobel prize winners and other internationally recognised figures from Stevin Snel and Huygens in the 17th century to Lorentz Kammerlingh Onnes Buys Ballot De Vries de Sitter and Oort in the 19th and 20th centuries Yet it has often been noted that the history of science in the Netherlands is underrepresented in the international literature The handbook *A History of Science in The Netherlands* aims to correct this situation by providing a chronological and thematic survey of the field from the 16th century to the present essays on selected aspects of science in the Netherlands and reference biographies of about 65 important Dutch scientists Written by more than 10 experts from Europe and North America the handbook is the standard English language reference work for the field      **Cartesian Empiricisms** Mihnea Dobre,Tammy Nyden,2013-11-29 Cartesian Empiricisms considers the role Cartesians played in the acceptance of experiment in natural philosophy during the seventeenth century It aims to correct a partial image of Cartesian philosophers as paradigmatic system builders who failed to meet challenges posed by the new science s innovative methods Studies in this volume argue that far from being strangers to experiment many Cartesians used and integrated it into their natural philosophies Chapter 1 reviews the historiographies of early modern philosophy science and Cartesianism and their recent critiques The first part of the volume explores various Cartesian contexts of experiment the impact of French condemnations of Cartesian philosophy in the second half of the seventeenth century the relation between Cartesian natural philosophy and the Parisian academies of the 1660s the complex

interplay between Cartesianism and Newtonianism in the Dutch Republic the Cartesian influence on medical teaching at the University of Duisburg and the challenges chemistry posed to the Cartesian theory of matter The second part of the volume examines the work of particular Cartesians such as Henricus Regius Robert Desgabets Jacques Rohault Burchard de Volder Antoine Le Grand and Balthasar Bekker Together these studies counter scientific revolution narratives that take rationalism and empiricism to be two mutually exclusive epistemological and methodological paradigms The volume is thus a helpful instrument for anyone interested both in the histories of early modern philosophy and science as well as for scholars interested in new evaluations of the historiographical tools that framed our traditional narratives

**Centres and Cycles of Accumulation in and Around the Netherlands During the Early Modern Period** Lissa Roberts, 2011 The Netherlands housed a number of widely known envied and emulated centers of accumulation during the early modern period Raw and manufactured goods passed through Dutch port cities linking the country to global cycles of accumulation and exchange Its institutions of learning and culture similarly served as internationally famous centers of accumulation that furthered knowledge and cultural production embodied in the form of books maps prints exhibits and the like This collection of essays brings together the Dutch histories of manufacture commerce and global exchange along with the histories of knowledge and cultural circulation during the 17th and 18th centuries by anatomizing the multi faceted concept of accumulation The book explores the processes that led to the formation of concentrated often hybrid sites of material intellectual and cultural accumulation in the Netherlands and its overseas stations as well as the concerns and consequences to which the successes and challenges of accumulation gave rise It will be of interest to historians of science technology culture and economics Series Low Countries Studies on the Circulation of Natural Knowledge Vol 2

**The Sciences in Enlightened Europe** William Clark, Jan Golinski, Simon Schaffer, 1999-07 Radically reorienting our understanding of the Enlightenment this book explores the complex relations between enlightened values and the making of scientific knowledge Here monsters and automata barometers and botanical gardens polite academics and boisterous clubs plans for violent wars and for universal peace are all relocated in the landscape of enlightened Europe The contributors show how changing forms of discipline machinery and instrumentation affected the emergence of new kinds of knowledge consider how institutions of public rate taste and conversation helped provide a common frame for the study of human and nonhuman natures and explore the regional operations of scientific culture at the geographical fringes of Europe Covering a wide range of scientific disciplines both in the principal European countries and in areas peripheral to Europe the book also includes ample illustrations and an extensive bibliography Implicated in the rise of both fascism and liberal secularism the moral and political values that shaped the Enlightenment remain controversial today Through careful scrutiny of how these values influenced and were influenced by the concrete practices of its sciences this book gives us an entirely new sense of the Enlightenment from back cover

**Newton and Empiricism** Zvi Biener, Eric Schliesser, 2014-05-16 This volume of original papers by a leading team of

international scholars explores Isaac Newton's relation to a variety of empiricisms and empiricists. It includes studies of Newton's experimental methods in optics and their roots in Bacon and Boyle. Locke's and Hume's responses to Newton on the nature of matter, time, the structure of the sciences, and the limits of human inquiry. In addition, it explores the use of Newtonian ideas in 18th-century pedagogy and the life sciences. Finally, it breaks new ground in analyzing the method of evidential reasoning heralded by the *Principia*, its nature, strength, and development in the subsequent three centuries of gravitational research. The volume will be of interest to historians of science and philosophy and philosophers interested in the nature of empiricism.

***Burchard de Volder and the Age of the Scientific Revolution*** Andrea Strazzoni, 2019-11-18 This monograph details the entire scientific thought of an influential natural philosopher whose contributions unfortunately have become obscured by the pages of history. Readers will discover an important thinker, Burchard de Volder. He was instrumental in founding the first experimental cabinet at a European University in 1675. The author goes beyond the familiar image of De Volder as a forerunner of Newtonianism in Continental Europe. He consults neglected materials, including handwritten sources, and takes into account new historiographical categories. His investigation maps the thought of an author who did not sit with an univocal philosophical school but critically dealt with all the major philosophers and scientists of his age, from Descartes to Newton via Spinoza, Boyle, Huygens, Bernoulli, and Leibniz. It explores the way De Volder's unsystematic thought used, rejected, and re-shaped their theories and approaches. In addition, the title includes transcriptions of De Volder's teaching materials, disputations, dictations, and notes. Insightful analysis combined with a trove of primary source material will help readers gain a new perspective on a thinker so far mostly ignored by scholars. They will find a thoughtful figure who engaged with early modern science and developed a place that fostered experimental philosophy.

**The Arsenal of Eighteenth-Century Chemistry** Marco Beretta, Paolo Brenni, 2022-06-08 The substantial collection of Antoine Laurent Lavoisier's apparatus is not the only surviving collection of eighteenth-century chemical apparatus and instrumentation, but it is without question the most important. The present study provides the first scientific catalogue of Lavoisier's surviving apparatus. This collection of instruments is remarkable not only for the quality of many of them but above all for the number of items that have survived: ca. 600 items. Given such a wealth and variety of instruments, this study also offers the first comprehensive attempt to reconstruct the cultural and social context of Lavoisier's experimental activities.

**Sciences in the Universities of Europe, Nineteenth and Twentieth Centuries** Ana Simões, Maria Paula Diogo, Kostas Gavroglu, 2015-04-20 This book focuses on sciences in the universities of Europe in the nineteenth and twentieth centuries, and the chapters in it provide an overview, mostly from the point of view of the history of science, of the different ways universities dealt with the institutionalization of science teaching and research. A useful book for understanding the deep changes that universities were undergoing in the last years of the 20th century. The book is organized around four central themes: 1. Universities in the longue durée 2. Universities in diverse political contexts 3. Universities and academic research 4.

Universities and discipline formation The book is addressed at a broad readership which includes scholars and researchers in the field of General History Cultural History History of Universities History of Education History of Science and Technology Science Policy high school teachers undergraduate and graduate students of sciences and humanities and the general interested public

**The Germ of an Idea** Margaret DeLacy,2016-03-05 Contagionism is an old idea but gained new life in Restoration Britain The Germ of an Idea considers British contagionism in its religious social political and professional context from the Great Plague of London to the adoption of smallpox inoculation It shows how ideas about contagion changed medicine and the understanding of acute diseases

*An Observer of Observatories* Peter De Clercq,Kurt Moller Pedersen,2010-12-30 Thomas Bugge director of the observatory in Copenhagen kept a diary during his travels in Germany Holland and England in 1777 He described his meetings with leading scientists artists and instrument makers and the many scientific institutions he visited The diary is also full of drawings of the buildings technical devices and instruments he saw Bugge s diary is now available in an English translation with an introduction and notes by historians of science Kurt Moller Pedersen and Peter de Clercq

[Laura Bassi-The World's First Woman Professor in Natural Philosophy](#) Luisa Cifarelli,Raffaella Simili,2020-11-14 This book provides a fascinating insight into the life and scientific work of Laura Bassi the first female member of the influential Academy of Sciences of the Institute of Bologna and also the first woman to be appointed a university professor in physics or universal philosophy as it was then termed The book describes Laura Bassi s research activities and achievements explaining the influence of Newton her role in promoting Newtonian experimental physics in Bologna and her work as an experimentalist including on electricity Much attention is paid to the context in which Bassi developed her career The very considerable difficulties faced by a woman surrounded by male university teachers and members of the Academy are discussed casting light on the constraints that led Bassi to set up the first experimental physics laboratory in her home complete with the many instruments required for experimentation and private teaching The aim is to provide a rounded and well documented account

of the scientific endeavors and achievements of a too often overlooked scientist who struggled to overcome the prejudices of her age     *Technology and Culture* ,2000     **The Quarrel over Swammerdam's Posthumous Works** Andrea Strazzoni,2023-08-28 The Quarrel over Swammerdam s Posthumous Works reconstructs the vicissitudes of Johannes Swammerdam s *Biblia naturae* a pivotal collection of writings in the history of science Bequeathed to the polymath Melchisedech Th venot the manuscripts and drawings of the treatises constituting this collection were instead kept by the editor Hermann Wingendorp after Swammerdam s death 1680 triggering a quarrel over their publication By analysing Swammerdam s scientific legacy and by offering an edition of the correspondence testifying to the efforts towards such publication this book sheds light on the editorial history and intellectual context of Swammerdam s *Biblia* This reveals not only an intricate plot of authorized and unauthorized attempts to publish it but also an exchange of scientific texts and instruments in the late seventeenth century     Cohesion J. S. Rowlinson,2005-06-30 Why does matter stick together Why do gases condense to liquids and liquids to solids This book provides a detailed historical account of how some of the leading scientists of the past three centuries have tried to answer these questions     *Shaping a Dutch East Indies* Siegfried Huigen,2023-04-24 In 1724 1726 the Dutch clergyman Francois Valentyn published a 5 000 page account of the Dutch East India Company s empire It was the first and for a long time the only survey of the Dutch establishments in Asia and South Africa *Shaping a Dutch East Indies* analyses how Valentyn composed this work and how it largely determined the Dutch perspective on the colonies in Asia until the 1850s It seeks to highlight both the great diversity of knowledge gathered in Valentyn s book and its geographical spread from the Cape of Good Hope to Japan with a focus on the Indonesian archipelago Huigen s book is the first in depth study of Valentyn s work which is a foundational text in the history of Dutch colonialism
