Dewey Soper, Alice Evelyn Wilson, 1928 **Biological Series** ,1926 Bulletin ,1927 Evolutionary Genetics of Fishes Bruce Turner, 2012-12-06 It is my hope that this collection of reviews can be profitably read by all who are interested in

evolutionary biology However I would like to specifically target it for two disparate groups of biologists seldom mentioned in the same sentence classical ichthyologists and molecular biologists Since classical times and perhaps even before ichthyologists have stood in awe at the tremendous diversity of fishes The bulk of effort in the field has always been directed toward understanding this diversity i e extracting from it a coherent picture of evolutionary processes and lineages This effort has in turn always been overwhelmingly based upon morphological comparisons The practical advantages of such comparisons especially the ease with which morphological data can be had from preserved museum specimens are manifold But considered objectively outside its context of tradition morphological analysis alone is a poor tool for probing evolutionary processes or elucidating relationships The concepts of relationship and of evolution are inherently genetic ones and the genetic bases of morphological traits are seldom known in detail and frequently unknown entirely Earlier in this century several workers notably Gordon Kosswig Schmidt and in his salad years Carl Hubbs pioneered the application of genetic techniques and modes of reasoning to ichthyology While certain that most contemporary ichthyologists are familiar with this body of work I am almost equally certain that few of them regard it as pertinent to their own efforts *Creative*
