

Collective Behavior of Social Insects

- Usually the actions performed by insects are the combination of two or more of the previously described tasks.
- In the case of the bees when the colony outgrows the hive the mother queen and half of the workers form a cluster in a tree branch from where they start a search for a new nest.
- Three different types of tasks are observed in this process:

Information Processing in Social Insects Claire Detrain, Jean L. Deneubourg, Jacques M. Pasteels, 2012-12-06 Claire Detrain Jean Louis Deneubourg and Jacques Pasteels Studies on insects have been pioneering in major fields of modern biology In the 1970 s research on pheromonal communication in insects gave birth to the discipline of chemical ecology and provided a scientific frame to extend this approach to other animal groups In the 1980 s the theory of kin selection which was initially formulated by Hamilton to explain the rise of eusociality in insects exploded into a field of research on its own and found applications in the understanding of community structures including vertebrate ones In the same manner recent studies which decipher the collective behaviour of insect societies might be now setting the stage for the elucidation of information processing in animals Classically problem solving is assumed to rely on the knowledge of a central unit which must take decisions and collect all pertinent information However an alternative method is extensively used in nature problems can be collectively solved through the behaviour of individuals which interact with each other and with the environment The management of information which is a major issue of animal behaviour is interesting to study in a social life context as it raises additional questions about conflict cooperation trade offs Insect societies have proven particularly open to experimental analysis one can easily assemble or disassemble them and place them in controllable situations in the laboratory

The Evolution of Social Behavior in Insects and Arachnids Jae C. Choe, Bernard J. Crespi, 1997 Social insects and arachnids exhibit complex forms of behavior that involve cooperation in building a nest defending against attackers or rearing offspring This book is a comprehensive up to date guide to sociality and its evolution in a wide range of taxa

Collective Animal Behavior David J. T. Sumpter, 2010-10-17 The book combines traditional approaches to behavioral ecology with ideas about self organization and complex systems from physics and mathematics

Food Exploitation By Social Insects Stefan Jarau, Michael Hrnčíř, 2009-05-21 Omnipresent in virtually all terrestrial ecosystems and of undisputed ecological and economical importance the study of social insects is an area that continues to attract a vast number of researchers As a consequence a huge amount of information about their biology and ecology has accumulated Distilling this scattered information into a highly

Phylogenies and the Comparative Method in Animal Behavior Emília P. Martins, 1996 In the last ten years the comparative method has been revolutionized by modern statistical ways of incorporating phylogenies into the design and analysis of comparative studies The results of this revolution are particularly important in the study of animal behavior which has relied on interspecific comparisons to infer universal trends and evolutionary patterns The chapters of this edited volume consider the impact of modern phylogenetic comparative methods on the study of animal behavior and discuss the main issues that need to be considered in design and analysis of a comparative study considers possible differences between the

evolution of behavior and the evolution of morphology and reviews how phylogenetic comparative studies have been used in certain areas of behavioral research

Comparative Psychology of Invertebrates Gary Greenberg, Ethel Tobach, 2013-09-13 First Published in 1997 The papers in this volume on invertebrate behaviour predominantly ant behaviour are presented as a tribute to T C Schneirla and to his theoretical and experimental contributions to our understanding of the development and evolution of behaviour His emphasis on development also brought to the fore new questions many of which are addressed in this volume Advances in technical instrumentation for research will be useful in reformulating these old questions in new and significantly constructive programs for responsible research The theoretical contributions of Schneirla will continue to prove an important facilitation of those new research techniques

Toward a Practice of Autonomous Systems Francisco J. Varela, Paul Bourguine, 1992-04-02 Artificial life embodies a recent and important conceptual step in modern science asserting that the core of intelligence and cognitive abilities is the same as the capacity for living The recent surge of interest in artificial life has pushed a whole range of engineering traditions such as control theory and robotics beyond classical notions of goal and planning into biologically inspired notions of viability and adaptation situatedness and operational closure These proceedings serve two important functions they address bottom up theories of artificial intelligence and explore what can be learned from simple models such as insects about the cognitive processes and characteristic autonomy of living organisms while also engaging researchers and philosophers in an exciting examination of the epistemological basis of this new trend Topics Artificial Animals Genetic Algorithms Autonomous Systems Emergent Behaviors Artificial Ecologies Immunologic Algorithms Self Adapting Systems Emergent Structures Emotion And Motivation Neural Networks Coevolution Fitness Landscapes Contributors H Bersini Domenico Parisi Rodney A Brooks Christopher G Langton S Kauffman J L Denenbourg Pattie Maes John Holland T Smithersm H Swefel H Muhlenbein

Organization of Insect Societies Jürgen Gadau, Jennifer Fewell, 2009-02-28 In this landmark volume an international group of scientists has synthesized their collective expertise and insight into a newly unified vision of insect societies and what they can reveal about how sociality has arisen as an evolutionary strategy J rgen Gadau and Jennifer Fewell have assembled leading researchers from the fields of molecular biology evolutionary genetics neurophysiology behavioral ecology and evolutionary theory to reexamine the question of sociality in insects Recent advances in social complexity theory and the sequencing of the honeybee genome ensure that this book will be valued by anyone working on sociality in insects At the same time the theoretical ideas presented will be of broad ranging significance to those interested in social evolution and complex systems

Behavioral Mechanisms in Evolutionary Ecology Leslie Real, 1994-11-30 The first book length exploration of behavioral mechanisms in evolutionary ecology this ambitious volume illuminates long standing questions about cause and effect relations between an animal s behavior and its environment By focusing on biological mechanisms the sum of an animal s cognitive neural developmental and hormonal processes leading researchers demonstrate how the integrated study of animal

physiology cognitive processes and social interaction can yield an enriched understanding of behavior With studies of species ranging from insects to primates the contributors examine how various animals identify and use environmental resources and deal with ecological constraints as well as the roles of learning communication and cognitive aspects of social interaction in behavioral evolution Taken together the chapters demonstrate how the study of internal mechanistic foundations of behavior in relation to their ecological and evolutionary contexts and outcomes provides valuable insight into such behaviors as predation mating and dispersal Behavioral Mechanisms in Evolutionary Ecology shows how a mechanistic approach unites various levels of biological organization to provide a broader understanding of the biological bases of behavioral evolution

Stigmergic Optimization Ajith Abraham,Crina Grosan,Vitorino Ramos,2006-07-18 First studied in social insects like ants indirect self organizing interactions known as stigmergy occur when one individual modifies the environment and another subsequently responds to the new environment The implications of self organizing behavior extend to robotics and beyond This book explores the application of stigmergy for a variety of optimization problems The volume comprises 12 chapters including an introductory chapter conveying the fundamental definitions inspirations and research challenges **Advances in the Study of Behavior** Peter J.B. Slater,Jay S. Rosenblatt,Charles T. Snowdon,Timothy J. Roper,Marc Naguib,2003-12-18 The aim of Advances in the Study of Behavior remains as it has been since the series began to serve the increasing number of scientists who are engaged in the study of animal behavior by presenting their theoretical ideas and research to their colleagues and to those in neighboring fields We hope that the series will continue its contribution to the development of the field as its intended role was phrased in the Preface to the first volume in 1965 Since that time traditional areas of animal behavior have achieved new vigor by the links they have formed with related fields and by the closer relationship that now exists between those studying animal and human subjects **Advances in the Study of Behavior** ,1991-05-02 Advances in the Study of Behavior **Fundamentals of Natural Computing** Leandro Nunes de Castro,2006-06-02 Natural computing brings together nature and computing to develop new computational tools for problem solving to synthesize natural patterns and behaviors in computers and to potentially design novel types of computers Fundamentals of Natural Computing Basic Concepts Algorithms and Applications presents a wide ranging survey of novel technique **Design Principles for the Immune System and Other Distributed Autonomous Systems** Lee A. Segel,Irun R. Cohen,2001-06-14 Design Principles for the Immune System and Other Distributed Autonomous Systems is the first book to examine the inner workings of such a variety of distributed autonomous systems from insect colonies to high level computer programs to the immune system It offers insight into the fascinating world of these systems that emerge from the interactions of seemingly autonomous components and brings us up to date on the state of research in these areas Using the immune system and certain aspects of its functions as a primary model this book examines many of the most interesting and troubling questions posed by complex systems How do systems choose the right set of agents to perform appropriate actions with appropriate intensities at

appropriate times How in the immune system ant colonies and metabolic networks does the diffusion and binding of a large variety of chemicals to their receptors permit coordination of system action What advantages drive the various systems to complexity and by what mechanisms do the systems cope with the tendency toward unwieldiness and randomness of large complex systems Search and Optimization by Metaheuristics Ke-Lin Du,M. N. S. Swamy,2016-07-20 This textbook provides a comprehensive introduction to nature inspired metaheuristic methods for search and optimization including the latest trends in evolutionary algorithms and other forms of natural computing Over 100 different types of these methods are discussed in detail The authors emphasize non standard optimization problems and utilize a natural approach to the topic moving from basic notions to more complex ones An introductory chapter covers the necessary biological and mathematical backgrounds for understanding the main material Subsequent chapters then explore almost all of the major metaheuristics for search and optimization created based on natural phenomena including simulated annealing recurrent neural networks genetic algorithms and genetic programming differential evolution memetic algorithms particle swarm optimization artificial immune systems ant colony optimization tabu search and scatter search bee and bacteria foraging algorithms harmony search biomolecular computing quantum computing and many others General topics on dynamic multimodal constrained and multiobjective optimizations are also described Each chapter includes detailed flowcharts that illustrate specific algorithms and exercises that reinforce important topics Introduced in the appendix are some benchmarks for the evaluation of metaheuristics Search and Optimization by Metaheuristics is intended primarily as a textbook for graduate and advanced undergraduate students specializing in engineering and computer science It will also serve as a valuable resource for scientists and researchers working in these areas as well as those who are interested in search and optimization methods

Chemical Ecology of Insects 2 R.T. Carde,W.J. Bell,2012-12-06 During the past decade the study of the chemical structures used by insects has advanced from a subject that could be reviewed in a single volume to a vastly more advanced level This important new volume brings together a focused group of reviews that offer perspective on the most interesting advances in insect chemical ecology Chemical Ecology of Insects 2 brings together an internationally respected group of experts covering such topics as chemoreception and integration orientation mechanisms plant insect interactions and insect insect interactions An important benefit of these reviews lies in the identification of the boundaries of our current knowledge and the most profitable areas in which we should expect these areas to develop This important work will appeal to entomologists and ecologists working directly with insects In addition plant scientists interested in the interaction of plants and insects will find much valuable information The book is intended to benefit both field and laboratory researchers as well as advanced students **From Animals to Animats 2** Jean-Arcady Meyer,H.
