*Agroecological Management of Weeds - Minimizing Chemical Herbicides in Arable Cropping* Bärbel Gerowitt,Rick Llewellyn,Carol Mallory-Smith ,Elba De La Fuente,2024-09-19 Weeds have a strong impact on arable production causing yield quantity and quality losses Adequately controlling them is fundamental in arable cropping However weeds develop strategies to survive control For decades the dominating method to manage weeds was the use of chemical herbicides Weeds becoming resistant against these chemical herbicides is an obvious and global reaction together with undesired environmental consequences this creates increasing

pressure to overcome chemical herbicide use Therefore foreseeing weed management demands exploiting and evaluating novel methods to replace them Since each single method will probably be less effective than chemical herbicides systematic integration and upscaling on levels like fields farms cropping systems landscapes and socio economics is required in research Agro ecological management of weeds stands for this ambition *Vegetation Management in the Appalachian Mountains*

*Plant Phenotyping and Phenomics for Plant Breeding* Gustavo A. Lobos, Anyela V. Camargo, Alejandro del Pozo, Jose L. Araus, Rodomiro Ortiz, John H. Doonan, 2018-08-16 As a consequence of the global climate change both the reduction on yield potential and the available surface area of cultivated species will compromise the production of food needed for a constant growing population There is consensus about the significant gap between world food consumption projected for the coming decades and the expected crop yield improvements which are estimated to be insufficient to meet the demand The complexity of this scenario will challenge breeders to develop cultivars that are better adapted to adverse environmental conditions therefore incorporating a new set of morpho physiological and physico chemical traits a large number of these traits have been found to be linked to heat and drought tolerance Currently the only reasonable way to satisfy all these demands is through acquisition of high dimensional phenotypic data high throughput phenotyping allowing researchers with a holistic comprehension of plant responses or Phenomics Phenomics is still under development This Research Topic aims to be a contribution to the progress of methodologies and analysis to help understand the performance of a genotype in a given environment
