Higher Geometry An Introduction To Advanced Methods In Analytic Geometry:

Higher Geometry Frederick S. Woods, 2013-10-29 For students of mathematics with a sound background in analytic geometry and some knowledge of determinants this volume has long been among the best available expositions of advanced work on projective and algebraic geometry Developed from Professor Woods lectures at the Massachusetts Institute of Technology it bridges the gap between intermediate studies in the field and highly specialized works With exceptional thoroughness it presents the most important general concepts and methods of advanced algebraic geometry as distinguished from differential geometry It offers a thorough study of one two three and four dimensional coordinated systems the concepts they entail and their associated geometrical elements This study culminates with a discussion of n dimensional geometry in an abstract sense of which the earlier subjects form concrete illustrations As each system of coordinates is introduced the meaning of the linear and quadratic equations is studied with principal emphasis on the interpretation of equations as well as on a knowledge of useful geometrical facts The principle of duality is kept at the forefront and the nature of imaginary elements and the conventional character of the locus of infinity dependent upon the type of coordinates used are carefully explained
