Homocysteine Metabolism:

Homocysteine Metabolism: From Basic Science to Clinical Medicine Ian Graham, Helga Refsum, Irwin H. Rosenberg, Per Magne Ueland, 2012-12-06 This volume is the first comprehensive treatise on homocysteine to treat the topic from the basic biochemical metabolic genetic and dietary determinants to disease relationships including concepts of pathogenesis In addition the public health implications of these associations are described To date evidence strongly supports the hypotheses that Hyperhomocysteinemia is a strong independent determinant of vascular disease and Many cases of hyperhomocysteinemia are amenable to homocysteine lowering treatment with B vitamins LIST The strength of this evidence is prompting discussion of large scale homocysteine lowering interventions Against this background of growing recognition of the importance of homocysteine as a factor in coronary artery disease cerebrovascular disease stroke and peripheral vascular disease the editors conceived of a state of the art monograph on homocysteine and its relationships to disease The contributors would be those scientists who in fact had written the history of this field of study over the past third of a century The editors invited the leading investigators in the world to contribute chapters in their own areas of expertise to this monograph and to deliver those papers at the first International Meeting on Homocysteine in Ireland which has emerged as an important study center and where the first cases of homocystinuria were reported more than three decades ago

Homocysteine Metabolism in Health and Disease Govind Prasad Dubey, Krishna Misra, Rajesh K. Kesharwani, Rudra P. Ojha, 2022-05-12 This book comprehensively reviews the association of homocysteine metabolism with the etiology of various human disorders The well defined chapters embedded the central and peripheral effects of homocysteine metabolism intricately related with cardiovascular neurodegenerative metabolic and autoimmune disorders Further it discusses the mechanisms of perturbation of cellular proteostasis by elevated homocysteine levels and provides a comprehensive account of pathophysiological consequences and clinical implications of homocysteine containing proteins The book also reviews association of genetic variants of homocysteine metabolic genes with type 2 diabetes mellitus and obesity It also describes the molecular mechanism of hyperhomocysteinemia in the negative feedback regulation of neural stem cell proliferation and alterations in DNA methylation Taken together it summarizes the mechanisms of hyper homocysteinemia induced endothelial dysfunction and physiological functions of hydrogen sulfide as the protective agent *Focus on Homocysteine and the Vitamins* Christina Bolander-Gouaille, 2013-11-22 During the last 10 12 years the research on homocysteine has become very active About 1500 of articles are now published each year on homocysteine and the vitamins involved in its metabolism A disturbed homocysteine metabolism can be an underlying factor for pregnancy complications and fetal malformations cardiovascular disease dementia psychiatric and neurologic disorders and possibly carcinogenesis A disturbed homocysteine metabolism can in most cases be normalised by treatment with folate and or vitamins B12 and B6 Many of these findings therefore directly concern most practitioners However if there are good reviews covering single aspects of this research

these are published in specialised journals The author has realised the difficulties for the practitioner in keeping updated This second edition has been thoroughly updated and also offers more data on the vitamins Over 1600 references are made available *Homocysteine in Health and Disease* Ralph Carmel,Donald W. Endothelial Dysfunctions in Vascular Disease Raffaele De Caterina, Peter Libby, 2008-04-15 Bridging the gap between the laboratory and the bedside this timely volume illuminates the connection between endothelial dysfunction and vascular disease This comprehensive survey of atherosclerotic disease begins with biology incorporating the latest breakthroughs in the field then elucidates risk factors and diagnostic tools and markers A major section on endothelium directed prevention and therapy shows you how to apply cutting edge research to clinical care Under the careful editorial guidance of Drs De Caterina and Libby the highly regarded contributors address endothelial activation and the initiation of atherosclerosis mechanisms of plaque progression and complications the role of LDL in the origin and progression of atherosclerosis advanced glycation endproducts and the accelerated atherosclerosis in diabetes oxidative stress and vascular disease soluble adhesion molecules as markers of vascular disease hormone replacement therapy and cardiovascular risk anti oxidants and endothelial protection and more The first book dedicated to the central role of endothelial dysfunction in vascular disease this concise volume gathers all the latest information on the subject into one convenient and cohesive text Make sure your patients are benefiting from current knowledge by keeping a copy of Endothelial Dysfunctions in Vascular Disease close at hand for frequent consultation

Introduction Every book has a history this one not excepted having emerged from intersections in professional lives of the Editors This book bears the fruits of a collaboration between the pupil RDC and the mentor PL During an extended sabbatical of the pupil in Boston in 1994 we probed together the concept that endothelial dysfunction served as a common denominator of vascular disease with the balance between inflammation and its inhibition as a fulcrum of the regulation of the behavior of endothelial cells As practicing cardiologists in our clinical lives we sought to link to endothelial function the mechanisms of action of risk factors and of pharmacologic agents used to treat and prevent vascular disease The pupil therefore authored a few reviews on the mechanism of action of risk factors and included them in a small book published in Italian for which the mentor wrote a preface The book was greeted with favor from the Italian cardiological community and provided the nidus for the present more ambitious endeavor which includes updated reviews on the pathogenesis of vascular disease and on the most novel aspects of vascular biology

This enterprise was enabled by the contributions of many of our former or present collaborators and colleagues without whose enthusiasm and engagement this work could never have seen light. We largely underestimated the devotion necessary on our own side at the beginning but it ultimately yielded a product that we feel achieves our original goals. We are aware that we confront a continuously evolving topic where frequent updates would be desirable if not necessary. Yet we believe in the value of books such as the current one that attempt to organize in a snapshot of time the vast amount of literature available in a coherent and comprehensive scheme. We are aware of existing gaps of emerging material not paid its due and of the rapid evolution of some of the concepts highlighted within. The links between the laboratory and the clinic have never afforded more opportunity for new understanding and advances in diagnosis and treatment than today. We hope that our colleagues vascular biologists, cardiologists, internists and other physicians alike will find this compendium a useful guide to this most exciting time in vascular biology and medicine. Nutritional Management and Metabolic Aspects of Hyperhomocysteinemia Mostafa I. Waly, 2021-03-31. Elevated blood concentrations of homocysteine, B vitamins deficiencies and oxidative stress are etiological factors for many human chronic diseases yet the etiologic relationship of hyperhomocysteinemia to these disorders remains poorly understood. Clinical trials continue to support the notion that hyperhomocysteinemia is involved in the pathogenesis of oxidative stress and its associated impairment of cellular redox status. Antioxidants, phytochemicals and bioactive agents are thought to be associated with the reduction of oxidative stress and reducing risk of chronic diseases yet their role in preventing hyperhomocysteinemia mediated oxidative stress has not been well covered in the literature. **Nutritional Management and Metabolic Aspects of Hyperhomocysteinemia** comprehensively covers the nutritional based intervention for combating hyperhomocysteinemia mediated oxidative stress, metabolic regulation of homocysteine dependent transsulfuration and transmethylation pathways and the identification of novel biomarkers for early diagnosis of hyperhomocysteinemia. The main goal of this text is to address the biochemical and nutritional aspects of hyperhomocysteinemia in relation to increasing risk of chronic diseases providing insight into the etiology of hyperhomocysteinemia and covering new research on the effective reduction and management of hyperhomocysteinemia associated chronic diseases. For researchers seeking a singular source for the understanding of the biochemical aspects and nutrition based combat of hyperhomocysteinemia its risk factors, preventive measures and possible treatments currently available, this text provides all of the important needed information in up to date and comprehensive form. *Clinical Studies in Medical Biochemistry* Robert H. Glew, Miriam D. Rosenthal, 2007. This edition uses actual clinical cases to illustrate important principles of biochemistry and molecular biology in the context of human disease. The format of each chapter remains the same: case presentation, diagnosis, therapy and references.

Atherosclerosis, Large Arteries and Cardiovascular Risk Michel Safar, Edward D. Frohlich, 2007. Arterial stiffness is now firmly established as an important and independent predictor of cardiovascular risk. The structural and functional

changes of the large arteries may be age related but a number of conditions have been associated with accelerated arterial stiffening including the hypertensive diseases atherosclerosis end stage renal disease and traditional cardiovascular risk factors such as diabetes mellitus and smoking This book presents the current thinking of international experts regarding the underlying mechanisms of cardiovascular risk and the pathogenesis and pathophysiology of large arterial stiffness and reduced large arterial distensibility It not only gives new insights into the relationship between arterial stiffness and atherosclerosis but also establishes the possible interactions with age and other cardiovascular factors such as high blood pressure diabetes and hyperlipidemia Finally the therapeutic means of approaching arterial stiffness are analyzed in detail and new perspectives for the treatment and prevention of cardiovascular diseases are developed Authoritative and up to date this book is a valuable resource for basic scientists interested in vascular physiology and pathophysiology for clinicians in the areas of cardiology diabetes and renal diseases as well as for investigators in drug development

Preventive Nutrition Adrienne Bendich, Richard J. Deckelbaum, 2001-03-06 Nutrition has been recognized as a major determinant of health for centuries Traditionally nutritional sciences have primarily targeted the prevention of diseases resulting from clinical deficiencies of essential nutrients such as scurvy and rickets Contemporary nutritional research has focused on the prevention of major diseases of Western civilization particularly cardiovascular disease and cancer as well as promoting maternal and child health and healthy aging Heart disease and cancer which were rare in most developing countries several decades ago are increasing dramatically in these countries in parallel with economic development and dietary transitions decreases in infectious diseases and increasing sedentary lifestyle and obesity Substantial evidence indicates major chronic diseases such as coronary heart disease type 2 diabetes and some cancers are largely preventable by relatively simple diet and lifestyle modifications Despite the great potential of nutrition in preventing diseases and improving health nutrition is not routinely emphasized in the education and training of physicians and other health care professionals This has resulted in inadequate nutritional knowledge and lack of skills in providing dietary counseling among many health care professionals Further more in the past decade the public s access to nutritional information has been increasing rapidly particularly through the Internet There are now hundreds of websites providing a wide range of nutritional information and selling numerous dietary products Because of the explosion in nutritional information the public s demand for nutritional advice has been increasing rapidly and will continue to rise
