## High Himalaya:

*Murder in the High Himalaya* Jonathan Green, 2010-06-01 On September 30 2006 gunfire echoed through the thin air near Advance Base Camp on Cho Oyu Mountain. Frequented by thousands of climbers each year, Cho Oyu lies nineteen miles east of Mt Everest on the border between Tibet and Nepal. To the elite mountaineering community it offers a straightforward summit; a warm up climb to her formidable sister. To Tibetans, Cho Oyu promises a gateway to freedom through a secret glacial path. The Nangpa La Murder in the High Himalaya is the unforgettable account of the brutal killing of Kelsang Namtso, a seventeen year old Tibetan nun fleeing to India by Chinese border guards. Witnessed by dozens of Western climbers, Kelsang's death sparked an international debate over China's savage oppression of Tibet. Adventure reporter Jonathan Green has gained rare entrance into this shadow land at the rooftop of the world. In his affecting portrait of modern Tibet, Green raises enduring questions about morality and the lengths we go to achieve freedom.

*The Himalayan Glaciers, Climate Change and Society* R. K. Ganjoo, M. N. Koul, 2025-01-20 This book provides detailed information on the Northwestern Himalayas in India. The scientific data compiled in the book is based on more than two decades of field and laboratory studies by the authors. The Ladakh region is a well known cold desert with unique geological and climatic setting. The influence of Westerlies in the region has played a significant role in the Ladakh region to behave much differently than rest of the Himalaya. The Karakorum Anomaly has been a key factor in negating the effect of global climate change in this region of Himalaya. The scientific discussion of some major glaciers of the region as case study are also discussed in this book. The uniqueness of the region with respect to climate shall be elaborated with the help of case studies.

Mukherjee,R. Carosi,P.A. van der Beek, B.K. Mukherjee,D.M. Robinson,2015-09-28 The Himalayan mountain belt which developed during the India Asia collision starting about 55 Ma ago is a dramatically active orogen and it is regarded as the classic collisional orogen It is characterized by an impressively continuous 2500 km of tectonic units thrusts and normal faults as well as large volumes of high grade metamorphic rocks and granites exposed at the surface This constitutes an invaluable field laboratory where amazing crustal sections can be observed directly in very deep gorges It is possible to unravel the tectonic and metamorphic evolution of litho units to observe the mechanisms of exhumation of deep seated rocks and the propagation of the deformation Himalayan tectonics has been the target of many studies from numerous international researchers over the years In the last 15 years there has been an explosion of data and theories from both geological and geophysical perspectives This book presents the results of integrated multidisciplinary studies including geology petrology magmatism geochemistry geochronology and geophysics of the structures and processes affecting the continental lithosphere These processes and their spatial and temporal evolution have major consequences on the geometry and kinematics of the India Eurasia collision zone     *Himalayan Tectonics* P.J. Treloar,M.P. Searle,2019-10-08 The Himalaya Karakoram Tibet mountain belt resulted from Cenozoic collision of India and Asia and is frequently used as the type example of a continental collision orogenic belt The last quarter of a century has seen the publication of a remarkably detailed dataset relevant to the evolution of this belt Detailed fieldwork backed up by state of the art structural analysis geochemistry mineral

chemistry igneous and metamorphic petrology isotope chemistry sedimentology and geophysics produced a wide ranging archive of data rich scientific papers The rationale for this book is to provide a coherent overview of these datasets in addressing the evolution of the mountain ranges we see today This volume comprises 21 specially invited review papers on the Himalaya Kohistan arc Tibet the Karakoram and Pamir ranges These papers span the history of Himalayan research chronology of the collision stratigraphy magmatic and metamorphic processes structural geology and tectonics seismicity geophysics and the evolution of the Indian monsoon This landmark set of papers should underpin the next 25 years of Himalayan research
