High Power Lasers in Production Engineering Dieter Schuöcker,1999 High Power Lasers in Production Engineering Dieter Schuöcker,1999-01-01 **High Power Lasers in Production Engineering** Dieter Schuöcker,1999

High power lasers of either the gas or solid state type can be used to generate a focal spot with a diameter of about a tenth of a millimetre and a power density of up to 100 Mio W cm² With these intensities all materials can be heated up rapidly leading to fast melting violent evaporation or even plasma formation So laser beams can be utilized for various processing tasks such as transformation hardening cutting and ablation or welding and cladding or even rapid prototyping With these processes important advantages are achieved compared to conventional tools such as high processing speed due to the high concentration of energy and high quality of the processed workpiece without deformations due to the small overall heat input to the workpiece that corresponds to the small spot diameter All these advantages finally result in strongly reduced production costs which is the main reason for a world wide substitution of conventional processes and other beam tools by laser technology This monograph offers a great insight into the operation principles of high power laser sources the phenomena of interaction of laser beams and materials and the mechanisms of the various production processes with lasers thus enabling production engineers and others to make optimum use of the benefits of laser technology and to understand the technical properties and the physical limitations of this most recent technology especially in comparison to conventional tools and other beam tools and providing a sufficient basis for the understanding and use of future developments in this area

High Power Lasers - Science and Engineering R. Kossowsky,Miroslav Jelinek,Robert F. Walter,2013-03-09 In the thirty years since the invention of the CO₂ gas laser the major design issue has shifted from how to obtain the desired power level to how to achieve reliable operation At the same time the opening of many laser development facilities in the Former Soviet Union has allowed their achievements and design approaches to be understood and appreciated for the first time Further the industrial laser user community has identified a number of emerging applications at higher power levels 15 20 kW than are attainable by most commercial devices In High Power Lasers Science and Engineering the designers developers and users of high power gas laser systems discuss design approaches methods of enhancing performance new applications and user requirements *Steel Heat Treatment Handbook - 2 Volume Set* George E.
