A Glimpse into Geometric Representation Theory Mahir Bilen Can, Jörg Feldvoss, 2024-08-07 This volume contains the proceedings of the AMS Special Session on Combinatorial and Geometric Representation Theory held virtually on November 20 21 2021 The articles offer an engaging look into recent advancements in geometric representation theory Despite diverse subject matters a common thread uniting the articles of this volume is the power of geometric methods The authors explore the following five contemporary topics in geometric representation theory equivariant motivic Chern classes equivariant Hirzebruch classes and equivariant Chern Schwartz MacPherson classes of Schubert cells locally semialgebraic spaces Nash manifolds and their superspace counterparts support varieties of Lie superalgebras wreath Macdonald polynomials and equivariant extensions and solutions of the Deligne Simpson problem Each article provides a well structured overview of its topic highlighting the emerging theories developed by the authors and their colleagues [Subject Guide to Books in Print](#) ,1997

Galois Theory of Difference Equations Marius van der Put, Michael F. Singer, 1997-09-18 This book lays the algebraic foundations of a Galois theory of linear difference equations and shows its relationship to the analytic problem of finding meromorphic functions asymptotic to formal solutions of difference equations Classically this latter question was attacked by Birkhoff and Tritzinsky and the present work corrects and greatly generalizes their contributions In addition results are presented concerning the inverse problem in Galois theory effective computation of Galois groups algebraic properties of sequences phenomena in positive characteristics and q difference equations The book is aimed at advanced graduate researchers and researchers

Spaces of Homotopy Self-Equivalences - A Survey John W. Rutter, 1997-08-25 This survey covers groups of homotopy self equivalence classes of topological spaces and the homotopy type of spaces of homotopy self equivalences For manifolds the full group of equivalences and the mapping class group are compared as are the corresponding spaces Included are methods of calculation numerous calculations finite generation results Whitehead torsion and other areas Some 330 references are given The book assumes familiarity with cell complexes homology and homotopy Graduate students and established researchers can use it for learning for reference and to determine the current state of knowledge

An Algebraic Approach to Association Schemes Paul-Hermann Zieschang, 1996-08-19 The primary object of the lecture notes is to develop a treatment of association schemes analogous to that which has been so successful in the theory of finite groups The main chapters are decomposition theory representation theory and the theory of generators Tits buildings come into play when the theory of generators is developed Here the buildings play the role which in group theory is played by the Coxeter groups The text is intended for students as well as for researchers in algebra in particular in algebraic combinatorics

Ramanan,1996-12-16 This is a book aimed at researchers and advanced graduate students in algebraic geometry interested in learning about a promising direction of research in algebraic geometry It begins with a generalization of parts of Mumford s theory of the equations defining abelian varieties and moduli spaces It shows through striking examples how one can use these apparently intractable systems of equations to obtain satisfying insights into the geometry and arithmetic of these varieties It also introduces the reader to some aspects of the research of the first author into representation theory and invariant theory and their applications to these geometrical questions *The Semi-simple Zeta Function of Quaternionic Shimura Varieties* Harry Reimann,1997-04-14 This monograph is concerned with the Shimura variety attached to a quaternion algebra over a totally real number field For any place of good or moderately bad reduction the corresponding semi simple local zeta function is expressed in terms of semi simple local L functions attached to automorphic representations In an appendix a conjecture of Langlands and Rapoport on the reduction of a Shimura variety in a very general case is restated in a slightly stronger form The reader is expected to be familiar with the basic concepts of algebraic geometry algebraic number theory and the theory of automorphic representation Subject Guide to Children's Books in Print 1997 Bowker Editorial Staff,R R Bowker Publishing,1996-09 **Spaces of Orderings and Abstract Real Spectra** Murray Marshall,1996-10-02 This book is of interest to students as well as experts in the area of real algebraic geometry quadratic forms orderings valuations lattice ordered groups and rings and in model theory The original motivation comes from orderings on fields and commutative rings This is explained as is the important application to minimal generation

of semi algebraic sets Many results in the new theory of abstract real spectra also called spaces of signs appear here for the first time The reader needs elementary knowledge of commutative rings ordered fields and real closed fields and valuations

Vector Bundles on Curves - New Directions Shrawan Kumar, Gérard Laumon, Ulrich Stuhler, M.S. Narasimhan, Centro internazionale matematico estivo, 1997-01-28 The book gives a survey of some recent developments in the theory of bundles on curves arising out of the work of Drinfeld and from insights coming from Theoretical Physics It deals with 1 The relation between conformal blocks and generalised theta functions Lectures by S Kumar 2 Drinfeld Shtukas Lectures by G Laumon 3 Drinfeld modules and Elliptic Sheaves Lectures by U Stuhler The latter topics are useful in connection with Langlands programme for function fields The contents of the book would give a comprehensive introduction of these topics to graduate students and researchers

Flat Covers of Modules Jinzhong Xu, 1996-10-02 Since the injective envelope and projective cover were defined by Eckmann and Bas in the 1960s they have had great influence on the development of homological algebra ring theory and module theory In the 1980s Enochs introduced the flat cover and conjectured that every module has such a cover over any ring This book provides the uniform methods and systematic treatment to study general envelopes and covers with the emphasis on the existence of flat cover It shows that Enochs conjecture is true for a large variety of interesting rings and then presents the applications of the results Readers with reasonable knowledge in rings and modules will not have difficulty in reading this book It is suitable as a reference book and textbook for researchers and graduate students who have an interest in this field
