Homology Theory On Algebraic Varieties:

Homology Theory on Algebraic Varieties Andrew H. Wallace, 2015-01-14 Concise and authoritative monograph geared toward advanced undergraduate and graduate students covers linear sections singular and hyperplane sections Lefschetz's first and second theorems the Poincaré formula and invariant and relative cycles 1958 edition

Homology Theory on Algebraic Varieties Andrew Hugh Wallace, 1958

Homology Theory on Algebraic Varieties Albert H. Wallace, *Filtrations on the Homology of Algebraic Varieties* Eric M. Friedlander, Barry Mazur, 1994 This work provides a detailed exposition of a classical topic from a very recent viewpoint Friedlander and Mazur describe some foundational aspects of Lawson homology for complex projective algebraic varieties a homology theory defined in terms of homotopy groups of spaces of algebraic cycles Attention is paid to methods of group completing abelian topological monoids The authors study properties of Chow varieties especially in connection with algebraic correspondences relating algebraic varieties Operations on Lawson homology are introduced and analysed These operations lead to a filtration on the singular homology of algebraic varieties which is identified in terms of correspondences and related to classical filtrations of Hodge and Grothendieck

Selected Papers on Number Theory and Algebraic Geometry Katsumi Nomizu, 1996 This book presents papers that originally appeared in the Japanese journal Sugaku from the Mathematical Society of Japan The papers explore the relationship between number theory and algebraic geometry

Ample Subvarieties of Algebraic Varieties Robin Hartshorne, 2006-11-15

Algebraic Geometry II I.R. Shafarevich, 1995-12-21 This two part volume contains numerous examples and insights on various topics The authors have taken pains to present the material rigorously and coherently This book will be immensely useful to mathematicians and graduate students working in algebraic geometry arithmetic algebraic geometry complex analysis and related fields

Singularities, Algebraic Geometry, Commutative Algebra, and Related Topics Gert-Martin Greuel, Luis Narváez Macarro, Sebastià Xambó-Descamps, 2018-09-18 This volume brings together recent original research and survey articles by leading experts in several fields that include singularity theory algebraic geometry and commutative algebra The motivation for this collection comes from the wide ranging research of the distinguished mathematician Antonio Campillo in these and related fields Besides his influence in the mathematical community stemming from his research Campillo has also endeavored to promote mathematics and mathematicians networking everywhere especially in Spain Latin America and Europe Because of his impressive achievements throughout his career we dedicate this book to Campillo in honor of his 65th birthday Researchers and students from the world wide and in particular Latin American and European communities in singularities algebraic geometry commutative algebra coding theory and other fields covered in the volume will have interest in this book

Perspectives on Four Decades of Algebraic Geometry, Volume 2 Alberto Albano, Paolo Aluffi, Michele Bolognesi, Cinzia Casagrande, Elisabetta Colombo, Alberto Conte, Antonella Grassi, Claudio Pedrini, Gian Pietro Pirola, Alessandro Verra, 2025-01-22 The second of a two part volume this

collection offers a unifying vision of algebraic geometry exploring its evolution over the last four decades as well as state of the art research. With chapters written by established leaders in the field as well as younger researchers, readers will gain a wide ranging perspective of the area. The volume also commemorates the significant talent and contributions of Alberto Collino whose scientific accomplishments helped shape the themes and topics covered. *Perspectives on Four Decades of Algebraic Geometry Volume 2* will be a valuable resource for those interested in the ways algebraic geometry has expanded over the years and continues to grow. *Real Algebraic Geometry* Jacek Bochnak, Michel Coste, Marie-Francoise Roy, 2013-11-11 The present volume is a translation, revision and updating of our book published in French with the title *Géométrie Algébrique Réelle*. Since its publication in 1987 the theory has made advances in several directions. There have also been new insights into material already in the French edition. Many of these advances and insights have been incorporated in this English version of the book so that it may be viewed as being substantially different from the original. *Homology, Cohomology, And Sheaf Cohomology For Algebraic Topology, Algebraic Geometry, And Differential Geometry* Jean H Gallier, Jocelyn Quaintance, 2022-01-19 For more than thirty years the senior author has been trying to learn algebraic geometry. In the process he discovered that many of the classic textbooks in algebraic geometry require substantial knowledge of cohomology, homological algebra and sheaf theory. In an attempt to demystify these abstract concepts and facilitate understanding for a new generation of mathematicians, he along with co-author wrote this book for an audience who is familiar with basic concepts of linear and abstract algebra but who never has had any exposure to the algebraic geometry or homological algebra. As such this book consists of two parts. The first part gives a crash course on the homological and cohomological aspects of algebraic topology with a bias in favor of cohomology. The second part is devoted to presheaves, sheaves, Čech cohomology, derived functors, sheaf cohomology and spectral sequences. All important concepts are intuitively motivated and the associated proofs of the quintessential theorems are presented in detail, rarely found in the standard texts. *Algebraic Varieties* G. Kempf, 1993-09-09 An introduction to the theory of algebraic functions on varieties from a sheaf theoretic standpoint. **Algorithms in Real Algebraic Geometry** Saugata Basu, Richard Pollack, Marie-Françoise Coste-Roy, 2013-03-09 The algorithmic problems of real algebraic geometry such as real root counting, deciding the existence of solutions of systems of polynomial equations and inequalities or deciding whether two points belong in the same connected component of a semi algebraic set occur in many contexts. In this first ever graduate textbook on the algorithmic aspects of real algebraic geometry the main ideas and techniques presented form a coherent and rich body of knowledge linked to many areas of mathematics and computing. Mathematicians already aware of real algebraic geometry will find relevant information about the algorithmic aspects and researchers in computer science and engineering will find the required mathematical background. Being self contained the book is accessible to graduate students and even for invaluable parts of it to undergraduate students. **Library of Congress Subject Headings** Library of Congress, Library of Congress. Representation Theories and Algebraic Geometry A. Broer, 2013-03-09 The 12 lectures presented in Representation Theories and Algebraic Geometry focus on the very rich and powerful interplay between algebraic geometry and the representation theories of various modern mathematical structures such as reductive groups quantum groups Hecke algebras restricted Lie algebras and their companions This interplay has been extensively exploited during recent years resulting in great progress in these representation theories Conversely a great stimulus has been given to the development of such geometric theories as D-modules perverse sheaves and equivariant intersection cohomology The range of topics covered is wide from equivariant Chow groups decomposition classes and Schubert varieties multiplicity free actions convolution algebras standard monomial theory and canonical bases to annihilators of quantum Verma modules modular representation theory of Lie algebras and combinatorics of representation categories of Harish Chandra modules *Integrability,*
