Homotopy Theory And Duality:

Homotopy Theory and Duality Peter John Hilton, Beno Eckmann, 1959
Hilton, 1965 **Homotopy Theory and Duality** Peter John Hilton, 1967 *Parametrized Homotopy Theory* J. Peter May, Johann Sigurdsson, 2006 This book develops rigorous foundations for parametrized homotopy theory which is the algebraic topology of spaces and spectra that are continuously parametrized by the points of a base space It also begins the systematic study of parametrized homology and cohomology theories The parametrized world provides the natural home for many classical notions and results such as orientation theory the Thom isomorphism Atiyah and Poincare duality transfer maps the Adams and Wirthmuller isomorphisms and the Serre and Eilenberg Moore spectral sequences But in addition to providing a clearer conceptual outlook on these classical notions it also provides powerful methods to study new phenomena such as twisted K theory and to make new constructions such as iterated Thom spectra Duality theory in the parametrized setting is particularly illuminating and comes in two flavors One allows the construction and analysis of transfer maps and a quite different one relates parametrized homology to parametrized cohomology The latter is based formally on a new theory of duality in symmetric bicategories that is of considerable independent interest The text brings together many recent developments in homotopy theory It provides a highly structured theory of parametrized spectra and it extends parametrized homotopy theory to the equivariant setting The theory of topological model categories is given a more thorough treatment than is available in the literature This is used together with an interesting blend of classical methods to resolve basic foundational problems that have no nonparametrized counterparts *Homotopy Theory and Duality* Peter J. Hilton, 1959
Homotopy Theory and Duality Peter John Hilton (mathématicien.), 1965 **Homotopy Theory and Duality** Peter J. Hilton, 1959 *Homotopy Theory and Duality* Peter Hilton, 1959 *Duality for Smooth Families in Equivariant Stable Homotopy Theory* Po Hu, 2003 *Theoretical Study of Homotopy Theory and Duality for Modules and Spaces* BATTELLE MEMORIAL INST COLUMBUS OHIO., 1961 Contents Abstract General homotopy groups of spaces and maps Algebraic homotopy theory in abelian categories and in general non additive categories Group like structures in general categories Summary and analysis Topological aspect Algebraic aspect Group like structures Analysis Future work Group like structures in non additive categories Cone constructions and semi simplicial methods in general categories Homotopy and cohomology operations Administrative information **Research on Duality in Homotopy Theory Between the Mathematics Division, Air Force Office of Scientific Research, ARDC, and the University of Chicago Department of Mathematics** Edwin Henry Spanier, 1959 *Duality in 19th and 20th Century Mathematical Thinking* Ralf Krömer, Emmylou Haffner, 2024-07-01 This volume brings together scholars across various domains of the history and philosophy of mathematics investigating duality as a multi faceted phenomenon Encompassing both systematic analysis and historical examination the book endeavors to elucidate the status roles and dynamics of duality within the realms of 19th and

20th century mathematics Eschewing a priori notions the contributors embrace the diverse interpretations and manifestations of duality thus presenting a nuanced and comprehensive perspective on this intricate subject Spanning a broad spectrum of mathematical topics and historical periods the book uses detailed case studies to investigate the different forms in which duality appeared and still appears in mathematics to study their respective histories and to analyze interactions between the different forms of duality The chapters inquire into questions such as the contextual occurrences of duality in mathematics the influence of chosen forms of representation the impact of investigations of duality on mathematical practices and the historical interconnections among various instances of duality Together they aim to answer a core question Is there such a thing as duality in mathematics or are there just several things called by the same name and similar in some respect What emerges is that duality can be considered as a basic structure of mathematical thinking thereby opening new horizons for the research on the history and the philosophy of mathematics and the reflection on mathematics in general The volume will appeal not only to experts in the discipline but also to advanced students of mathematics history and philosophy intrigued by the complexities of this captivating subject matter

Relative Nonhomogeneous Koszul Duality Leonid Positselski, 2022-02-10 This research monograph develops the theory of relative nonhomogeneous Koszul duality Koszul duality is a fundamental phenomenon in homological algebra and related areas of mathematics such as algebraic topology algebraic geometry and representation theory Koszul duality is a popular subject of contemporary research This book written by one of the world's leading experts in the area includes the homogeneous and nonhomogeneous quadratic duality theory over a nonsemisimple noncommutative base ring the Poincare Birkhoff Witt theorem generalized to this context and triangulated equivalences between suitable exotic derived categories of modules curved DG comodules and curved DG contramodules The thematic example meaning the classical duality between the ring of differential operators and the de Rham DG algebra of differential forms involves some of the most important objects of study in the contemporary algebraic and differential geometry For the first time in the history of Koszul duality the derived D Omega duality is included into a general framework Examples highly relevant for algebraic and differential geometry are discussed in detail

Introduction to Homotopy Theory Martin Arkowitz, 2011-07-25 This is a book in pure mathematics dealing with homotopy theory one of the main branches of algebraic topology The principal topics are as follows Basic Homotopy H spaces and co H spaces fibrations and cofibrations exact sequences of homotopy sets actions and coactions homotopy pushouts and pullbacks classical theorems including those of Serre Hurewicz Blakers Massey and Whitehead homotopy Sets homotopy and homology decompositions of spaces and maps and obstruction theory The underlying theme of the entire book is the Eckmann Hilton duality theory The book can be used as a text for the second semester of an advanced undergraduate or graduate algebraic topology course

Handbook of Algebraic Topology I.M. James, 1995-07-18 Algebraic topology also known as homotopy theory is a flourishing branch of modern mathematics It is

very much an international subject and this is reflected in the background of the 36 leading experts who have contributed to the Handbook. Written for the reader who already has a grounding in the subject, the volume consists of 27 expository surveys covering the most active areas of research. They provide the researcher with an up to date overview of this exciting branch of mathematics.

Conference on Algebraic Topology in Honor of Peter Hilton Peter Hilton, Renzo A. Piccinini, Denis Sjerve, 1985. This book, which is the proceedings of a conference held at Memorial University of Newfoundland in August 1983, contains 18 papers in algebraic topology and homological algebra by collaborators and associates of Peter Hilton. It is dedicated to Hilton on the occasion of his 60th birthday. The various topics covered are homotopy theory, H -spaces, group cohomology, localization, classifying spaces, and Eckmann-Hilton duality. Students and researchers in algebraic topology will gain an appreciation for Hilton's impact upon mathematics from reading this book.

Bousfield Classes and Ohkawa's Theorem Takeo Ohsawa, Norihiko Minami, 2020-03-18. This volume originated in the workshop held at Nagoya University, August 28-30, 2015, focusing on the surprising and mysterious Ohkawa's theorem: the Bousfield classes in the stable homotopy category \mathcal{SH} form a set. An inspiring, extensive mathematical story can be narrated starting with Ohkawa's theorem, evolving naturally with a chain of motivational questions. Ohkawa's theorem states that the Bousfield classes of the stable homotopy category \mathcal{SH} surprisingly form a set, which is still very mysterious. Are there any toy models where analogous Bousfield classes form a set with a clear meaning? The fundamental theorem of Hopkins-Neeman-Thomason and others states that the analogue of the Bousfield classes in the derived category of quasi-coherent sheaves $D_{qc}(X)$ form a set with a clear algebro-geometric description. However, Hopkins was actually motivated not by Ohkawa's theorem but by his own theorem with Smith in the triangulated subcategory \mathcal{SH}_c consisting of compact objects in \mathcal{SH} . Now the following questions naturally occur: 1. Having theorems of Ohkawa and Hopkins-Smith in \mathcal{SH} , are there analogues for the Morel-Voevodsky A_1 -stable homotopy category \mathcal{SH}_k which subsumes \mathcal{SH} when k is a subfield of \mathbb{C}^2 ? Was it not natural for Hopkins to have considered $D_{qc}(X)_c$ instead of $D_{qc}(X)$? However, whereas there is a conceptually simple algebro-geometrical interpretation $D_{qc}(X)_c \simeq D_{perf}(X)$, it is its close relative $D_{bcoh}(X)$ that traditionally ever since Oka and Cartan has been intensively studied because of its rich geometric and physical information. This book contains developments for the rest of the story and much more, including the chromatic homotopy theory which the Hopkins-Smith theorem is based upon and applications of Lurie's higher algebra, all by distinguished contributors.
