Muller, 2017-10-06 The scientific achievements and forgotten legacy of a major Austrian research institute from its founding in 1902 to its wartime destruction in 1945 The Biologische Versuchsanstalt was founded in Vienna in 1902 with the explicit goal to foster the quantification mathematization and theory formation of the biological sciences Three biologists from affluent Viennese Jewish families Hans Przibram Wilhelm Figdor and Leopold von Portheim founded financed and nurtured the institute overseeing its development into one of the most advanced biological research institutes of the time And yet today its accomplishments are nearly forgotten In 1938 the founders and other members were denied access to the institute by the Nazis and were forced into exile or deported to concentration camps The building itself was destroyed by fire in April 1945 This book rescues the legacy of the Vivarium as the Institute was often called describing both its scientific achievements and its place in history The book covers the Viennese sociocultural context at the time of the Vivarium's founding and the scientific zeitgeist that shaped its investigations It discusses the institute's departments and their research topics and describes two examples that had scientific and international ramifications the early work of Karl von Frisch who in 1973 won the Nobel Prize in Physiology or Medicine and the connection to Cold Spring Harbor Laboratory in New York Contributors Heiner Fangerau Johannes Feichtinger Georg Gaugusch Manfred D Laubichler Cheryl A Logan Gerd B Muller Tania Munz Karin Nickelsen Christian Rei Kate E Sohasky Heiko Stoff Klaus Taschwer **Biologists and the Promise of American Life** Philip J. Pauly, 2018-06-05 Explorers evolutionists eugenicists sexologists and high school biology teachers all have contributed to the prominence of the biological sciences in American life In this book Philip Pauly weaves their stories together into a fascinating history of biology in America over the last two hundred years Beginning with the return of the Lewis and Clark expedition in 1806 botanists and zoologists identified science with national culture linking their

work to continental imperialism and the creation of an industrial republic Pauly examines this nineteenth century movement in local scientific communities with national reach the partnership of Asa Gray and Louis Agassiz at Harvard University the excitement of work at the Smithsonian Institution and the Geological Survey and disputes at the Agriculture Department over the continent's future He then describes the establishment of biology as an academic discipline in the late nineteenth century and the retreat of life scientists from the problems of American nature The early twentieth century however witnessed a new burst of public oriented activity among biologists Here Pauly chronicles such topics as the introduction of biology into high school curricula the efforts of eugenicists to alter the breeding of Americans and the influence of sexual biology on Americans most private lives Throughout much of American history Pauly argues life scientists linked their study of nature with a desire to culture to use intelligence and craft to improve American plants animals and humans They often disagreed and frequently overreached but they sought to build a nation whose people would be prosperous humane secular and liberal Life scientists were significant participants in efforts to realize what Progressive Era oracle Herbert Croly called the promise of American life Pauly tells their story in its entirety and explains why now in a society that is rapidly returning to a complex ethnic mix similar to the one that existed for a hundred years prior to the Cold War it is important to reconnect with the progressive creators of American secular culture *School Library Journal* ,1994 **Adult Catalog: Subjects** Los Angeles County Public Library,1970
