**Agricultural Chemicals and the Environment** R E Hester, R M Harrison, 2007-10-31 Enormous increases in agricultural productivity can properly be associated with the use of chemicals This statement applies equally to crop production through the use of fertilizers herbicides and pesticides as to livestock production and the associated use of drugs steroids and other growth accelerators There is however a dark side to this picture and it is important to balance the benefits which flow from the use of agricultural chemicals against their environmental impacts which sometimes are seriously disadvantageous **Agricultural Chemicals and the Environment** explores a variety of issues which currently are subject to wide ranging debate and are of concern not only to the scientific establishment and to students but also to farmers landowners managers legislators and to the general public Managing Risks of Nitrates to Humans and the Environment W S Wilson, A S Ball, R H Hinton, 1999-01-01 This volume concentrates on research information on the beneficial effects of nitrates and their fate in the environment Adopting an integrated approach it covers the agricultural environmental and medical aspects of this emotive topic In addition there is an extensive description of the biochemistry of nitrates in plants animals and humans including the positive aspects as well as the hazards **Nitrogen in the Environment: Sources, Problems and Management** R.F. Farm Chemicals Handbook, 1915 *Agricultural Input and Environment* S.P. Palaniappan, 1995-01-01

After the green revolution was launched in India, a substantial increase in the production of food grains was achieved through the use of improved crop varieties and higher levels of inputs like fertilizers, water, and plant protection chemicals. This made the revolution possible, but it has limitations of higher costs and of causing damage to the environment, especially when inputs are not used efficiently and judiciously. A decline of yields is being reported from the green revolution belts of India in spite of liberal application of fertilizers and other inputs. The environmental problems are now becoming real problems of the developing countries as well as the developing world. This disturbing trend is attributed to soil degradation, multi-nutrient deficiencies, and pest and diseases build-up. The use of chemical inputs increases yields for a limited period, but without good management, there is rapid deterioration of land and water resources. Inefficient use of fertilizers results in polluting the environment in addition to wastage of scarce resources. It is therefore imperative to conserve and utilize optimally the available production resources like land, water, and genetic diversity and to efficiently manage the agricultural inputs for sustaining high crop productivity on a long-term basis with minimum damage to the ecological and socio-economic environment. In this context, publication of a reference book is timely and appropriate. As the scientists, students, planners, administrators, and extensionists recognize the importance of environmental problems related to agriculture, but they need ready reference to learn more about the problems, plan research agenda, and develop strategies to tackle the problems. Hence, an attempt has been made to compile the information and present it in a readable form in this book. The book not only covers the effect of excessive use of chemical inputs on the environment, but also the effect of other human activities on agricultural production. It is sure that the book will be of immense use to post-graduate students and research workers in agricultural and environmental sciences, extension workers, progressive farmers, officials of the department of agriculture, environment, and pollution control board, administrators, planners, and policy makers, and the technical staff working in the agricultural input industry.
