War Department,1959 Programming Languages and Systems Pierpaolo Degano,2003-03-14 Comparison is a powerful cognitive research tool in science since it does across studies to evaluate similarities and differences e g across taxa or diseases This book deals with comparative research on plant disease epidemics Comparisons are done in specifically designed experiments or with posterior analyses From the apparently unlimited diversity of epidemics of hundreds of diseases comparative epidemiology may eventually extract a number of basic types These findings are very important to crop protection Plant disease epidemiology being the ecological branch of plant pathology may also be of value to ecologists but also epidemiologists in the areas of animal or human diseases may find interesting results applicable to their areas of research The Chronicles of X J. Subrahmanyam,2012-12-06 VLSI Specification Verification and Synthesis Proceedings of a workshop held in Calgary from 12 16 January 1987 The collection of papers in this book represents some of the discussions and presentations at a workshop on hardware verification held in Calgary January 12 16 1987 The thrust of the workshop was to give the floor to a few leading researchers involved in the use of formal approaches to VLSI design and provide them ample time to develop not only their latest ideas but also the evolution of these ideas In contrast to simulation where the objective is to assist in detecting errors in system behavior in the case of some selected inputs the intent of hardware verification is to formally prove that a chip design meets a specification of its intended behavior for all acceptable inputs There are several important applications where formal verification of designs may be argued to be cost effective Examples include hardware components used in safety critical applications such as flight control industrial plants and medical life support systems such as pacemakers The problems are of such magnitude in certain defense applications that the UK Ministry of Defense feels it cannot rely on commercial chips and has embarked on a program of producing formally verified chips to its own specification Hospital civil aviation and transport boards in the UK will also use these chips A second application domain for verification is afforded by industry where specific chips may be used in high volume or be remotely placed **Knowledge in Perspective** Ernest Sosa,1991-03-29 Ernest Sosa collects essays written over the last 25 years on the scope and nature of human knowledge **Report of the United States Commissioner of Fisheries for the Fiscal**

Year ... with Appendixes United States. Bureau of Fisheries,1930 **Metaphysical Grounding** Fabrice Correia,Benjamin Schnieder,2012-10-04 Some of the most eminent and enduring philosophical questions concern matters of priority what is prior to what What grounds what Is for instance matter prior to mind Recently a vivid debate has arisen about how such questions have to be understood Can the relevant notion or notions of priority be spelled out And how do they relate to other metaphysical notions such as modality truth making or essence This volume of new essays by leading figures in contemporary metaphysics is the first to address and investigate the metaphysical idea that certain facts are grounded in other facts An introduction introduces and surveys the debate examining its history as well as its central systematic aspects The volume will be of wide interest to students and scholars of metaphysics **Programming Language Implementation and Logic Programming** Jaan Penjam,1994-08-24 This volume constitutes the proceedings of the 6th International Symposium on Programming Language Implementation and Logic Programming PLILP 94 held in Madrid Spain in September 1994 The volume contains 27 full research papers selected from 67 submissions as well as abstracts of full versions of 3 invited talks by renowned researchers and abstracts of 11 system demonstrations and poster presentations Among the topics covered are parallelism and concurrency implementation techniques partial evaluation synthesis and language issues constraint programming meta programming and program transformation functional logic programming and program analysis and abstract interpretation **Powers, Parts and Wholes** Christopher J. Austin,Anna Marmodoro,Andrea Roselli,2023-08-25 This volume offers a fresh exploration of the parts whole relations within a power and among powers While the metaphysics of powers has been extensively examined in the literature powers have yet to be studied from the perspective of their mereology Powers are often assumed to be atomic and yet what they can do and what can happen to them is complex But if powers are simple how can they have complex manifestations Can powers have parts According to which rules of composition do powers compose into powers Given the centrality of powers in current scientific as well as philosophical thought recognizing and understanding the ontological differences between atomic and mereologically complex powers is important for both philosophy and science The first part of this book explores how powers divide the second part how powers compose The final part showcases some specific study cases in the domains of quantum mechanics and psychology Powers Parts and Wholes will be of interest to professional philosophers and graduate students working in metaphysics philosophy of science and logic **Combat Engineer** United States. Department of the Army,1977 **Report of Investigations** ,1948 **Kant, God and Metaphysics** Edward Kanterian,2017-11-15 Kant is widely acknowledged as the greatest philosopher of modern times He undertook his famous critical turn to save human freedom and morality from the challenge of determinism and materialism Intertwined with his metaphysical interests however he also had theological commitments which have received insufficient attention He believed that man is a fallen creature and in need of redemption He intended to provide a fortress protecting religious faith from the failure of rationalist metaphysics from the atheistic

strands of the Enlightenment from the new mathematical science of nature and from the dilemmas of Christian theology itself Kant was an epistemologist a philosopher of mind a metaphysician of experience an ethicist and a philosopher of religion But all this was sustained by his religious faith This book aims to recover the focal point and inner contradictions of his thought the secret thorn of his metaphysics as Heidegger once put it It first locates Kant in the tradition of reflection on the human weakness from Luther to Hume and then engages in a critical but charitable manner with Kant's entire pre-critical work including his posthumous fragments Special attention is given to *The Only Possible Ground* 1763 one of the most difficult interesting and underestimated of Kant's works The present book takes its cue from an older approach to Kant but also engages with recent Anglophone and continental scholarship and deploys modern analytical tools to make sense of Kant What emerges is an innovative and thought provoking interpretation of Kant's metaphysics set against the background of forgotten religious aspects of European philosophy

Practical Aspects of Declarative Languages Gopal Gupta, 2003-05-20 Declarative languages have traditionally been regarded by the mainstream computing community as too impractical to be put to practical use At the same time traditional conferences devoted to declarative languages do not have issues related to practice as their central focus

Thus there are few forums devoted to discussion of practical aspects and implications of newly discovered results and techniques related to declarative languages. The goal of the First International Workshop on Practical Aspects of Declarative Languages PADL is to bring together researchers, practitioners and implementors of declarative languages to discuss practical issues and practical implications of their research results. The workshop was held in San Antonio, Texas during January 18-19, 1999. This volume contains its proceedings. Fifty-three papers were submitted in response to the call for papers. These papers were written by authors belonging to twenty-one countries from six continents. Each paper was assigned to at least two referees for reviewing. Twenty-four papers were finally selected for presentation at the workshop. Many good papers could not be included due to the limited duration of the workshop. The workshop included invited talks by Mark Hayden of DEC Compaq Systems Research Center speaking on Experiences Building Distributed Systems in ML and Mark Wallace of Imperial College Center for Planning and Resource Control IC-PARC speaking on ECLiPSe Declarative Specification and Scalable Implementation.

Possibility and Actuality Nicolai Hartmann, 2013-03-22 Nicolai Hartmann's *Possibility and Actuality* is the second volume of a four-part investigation of ontology. It deals with such questions as: How do we know that something is really possible? Is the possible only the actual? Is the actual only the possible? What is the difference between ideal and real possibility? This groundbreaking work of modal analysis describes the logical relations between possibility, actuality and necessity and it provides insight into the relations between modes of knowledge and modes of being. Hartmann reviews the history of philosophical concepts of possibility and necessity from ancient Megarian philosophy to Aristotle to Medieval Scholasticism to Leibniz, Kant and Hegel. He explains the importance of modal analysis as a basic investigative tool and he proposes an approach to understanding the nature of human existence that unifies the fields of ontology, modal logic, metaphysics and epistemology. This brilliant and fascinating work is relevant to many topics of debate in contemporary philosophy including the ontology of possible worlds, the metaphysics of modality, the logic of counterfactual conditionals and modal epistemology. It illuminates the nature of real, ideal, logical and epistemic possibility.
