## **Group Based Modeling Of Development:**

**Group-Based Modeling of Development** Daniel S. Nagin, 2005-04-25 This book provides a systematic exposition of a group based statistical method for analyzing longitudinal data in the social and behavioral sciences and in medicine The methods can be applied to a wide range of data such as that describing the progression of delinquency and criminality over the life course changes in income over time the course of a disease or physiological condition or the evolution of the socioeconomic status of communities Using real world research data from longitudinal studies the book explains and applies this method for identifying distinctive time based progressions called developmental trajectories Rather than assuming the existence of developmental trajectories of a specific form before statistical data analysis begins the method allows the trajectories to emerge from the data itself Thus in an analysis of data on Montreal school children it teases apart four distinct trajectories of physical aggression over the ages 6 to 15 examines predictors of these trajectories and identifies events that may alter the trajectories Aimed at consumers of statistical methodology including social scientists criminologists psychologists and medical researchers the book presents the statistical theory underlying the method with a mixture of intuition and technical development Handbook of Developmental Research Methods Brett Laursen, Todd D. Little, Noel A. Card, 2012-02-01 Appropriate for use in developmental research methods or analysis of change courses this is the first methods handbook specifically designed to meet the needs of those studying development Leading developmental methodologists present cutting edge analytic tools and describe how and when to use them in accessible nontechnical language They also provide valuable guidance for strengthening developmental research with designs that anticipate potential sources of bias Throughout the chapters research examples demonstrate the procedures in action and give readers a better understanding of how to match research questions to developmental methods The companion website [www.guilford.com/laursen](http://www.guilford.com/laursen) materials supplies data and program syntax files for many of the chapter examples Developmental and Life-course Criminological Theories Paul Mazerolle, 2017-07-05 The developmental and life course perspective in criminology came to prominence during the late 1980s and throughout the 1990s a number of theories were developed to explain offending behavior over the life course This volume brings together theoretical statements empirical tests and debates of these major theories within the developmental and life course criminology perspective In the first section of the book original theoretical statements are provided and this is followed by a section which includes empirical tests of each of these theories conducted by researchers other than the original theorists The final section of the book provides a summary of the major debates both within the developmental and life course perspective and also between this perspective and others within criminology This comprehensive volume provides an informative overview of the developmental and life course perspective in criminology Community Based System Dynamics Peter S. Hovmand, 2013-11-09 Community Based System Dynamics introduces researchers and practitioners to the design and application of participatory systems modeling with diverse

communities The book bridges community based participatory research methods and rigorous computational modeling approaches to understanding communities as complex systems It emphasizes the importance of community involvement both to understand the underlying system and to aid in implementation Comprehensive in its scope the volume includes topics that span the entire process of participatory systems modeling from the initial engagement and conceptualization of community issues to model building analysis and project evaluation Community Based System Dynamics is a highly valuable resource for anyone interested in helping to advance social justice using system dynamics community involvement and group model building and helping to make communities a better place Individual-based Modeling and Ecology Volker

Grimm,Steven F. Railsback,2013-11-28 Individual based models are an exciting and widely used new tool for ecology These computational models allow scientists to explore the mechanisms through which population and ecosystem ecology arises from how individuals interact with each other and their environment This book provides the first in depth treatment of individual based modeling and its use to develop theoretical understanding of how ecological systems work an approach the authors call individual based ecology Grimm and Railsback start with a general primer on modeling how to design models that are as simple as possible while still allowing specific problems to be solved and how to move efficiently through a cycle of pattern oriented model design implementation and analysis Next they address the problems of theory and conceptual framework for individual based ecology What is theory That is how do we develop reusable models of how system dynamics arise from characteristics of individuals What conceptual framework do we use when the classical differential equation framework no longer applies An extensive review illustrates the ecological problems that have been addressed with individual based models The authors then identify how the mechanics of building and using individual based models differ from those of traditional science and provide guidance on formulating programming and analyzing models This book will be helpful to ecologists interested in modeling and to other scientists interested in agent based modeling **International**

**Handbook of Criminology** Shlomo Giora Shoham,Paul Knepper,Martin Kett,2010-02-23 The second handbook in the Shoham trilogy which includes the esteemed International Handbook of Penology and Criminal Justice and the upcoming International Handbook of Victimology this volume is a comprehensive treatment of criminology theory This text contains contributions from 25 of the top international scholars in the field across a wide range of disciplines Topics include social deviance research methods biological and physiological explanations personality types and family socialization processes The book also explores ecological and economic factors differential association and situational crime prevention cultural conflicts and immigration as well as stigmas group delinquency and juvenile delinquency **Agent-Based Modeling of**

**Environmental Conflict and Cooperation** Todd BenDor,Jürgen Scheffran,2018-10-12 Conflict is a major facet of many environmental challenges of our time However growing conflict complexity makes it more difficult to identify win win strategies for sustainable conflict resolution Innovative methods are needed to help predict understand and resolve conflicts

in cooperative ways Agent Based Modeling of Environmental Conflict and Cooperation examines computer modeling techniques as an important set of tools for assessing environmental and resource based conflicts and ultimately for finding pathways to conflict resolution and cooperation This book has two major goals First it argues that complexity science can be a unifying framework for professions engaged in conflict studies and resolution including anthropology law management peace studies urban planning and geography Second this book presents an innovative framework for approaching conflicts as complex adaptive systems by using many forms of environmental analysis including system dynamics modeling agent based modeling evolutionary game theory viability theory and network analysis Known as VIABLE Values and Investments from Agent Based interaction and Learning in Environmental systems this framework allows users to model advanced facets of conflicts including institution building coalition formation adaptive learning and the potential for future conflict and conflict resolution based on the long term viability of the actors strategies Written for scholars students practitioners and policy makers alike this book offers readers an extensive introduction to environmental conflict research and resolution techniques As the result of decades of research the text presents a strong argument for conflict modeling and reviews the most popular and advanced techniques including system dynamics modeling agent based modeling and participatory modeling methods This indispensable guide uses NetLogo a widely used and free modeling software package to implement the VIABLE modeling approach in three case study applications around the world Readers are invited to explore adapt modify and expand these models to conflicts they hope to better understand and resolve
