**Collaborative Engineering** Ali K. Kamrani,Emad Abouel Nasr,2008-07-08 Collaborative Engineering CE is the systematic approach to the integrated concurrent design of products and related processes including manufacturing product service and support This approach is intended to cause the developers to consider all elements of the product life cycle from conception through disposal including quality cost schedule and user requirements The objective of Collaborative Engineering is to reduce the system product development cycle time through a better integration of resources activities and processes Collaborative Engineering Theory and Practice offers insights into the methods and techniques that enable implementing a Collaborative Engineering concept on product design by integrating capabilities for intelligent information support and group decision making utilizing a common enterprise network model and knowledge interface through shared ontologies The book is also a collection of the latest applied methods and technology from selected experts in this area which will be structured in a way useful in assisting and structuring the course **Product Design for Modularity** Ali K. Kamrani,Sa'ed M. Salhieh,2013-04-17 Modular products are products that fulfill various overall functions through the combination of distinct building blocks or modules in the sense that the overall function performed by the product can be divided into sub functions that can be implemented by different modules or components An important aspect of modular products is the creation of a basic core unit to which different components modules can be fitted thus enabling a variety of versions of the same module to be produced The core should have sufficient capacity to cope with all expected variations in performance and usage Components used in a modular product must have features that enable them to be coupled together to form a complex product Modularity will promote reduction in product development time customization and upgrades cost efficiencies due to amortization quality design standardization and reduction in order lead time The purpose of this book is to

develop a structured approach to the design of products using the concept of modularity assembly and manufacturability The book has proposed and developed a structured and systematic approach to product and systems design using the modularity concept Mathematical and genetic algorithm models are developed to support the developed methodology Expectations and Disappointments of Industrial Innovations Gideon Halevi, 2017-04-25 The Integrated Manufacturing System IMS Group Technology Numerical Control and Computer Aided Design CAD were four outstanding innovations that were one time milestones of scientific industrial management This book describes the expectations and disappointments of the common pitfalls of these ingenious ideas which leads to understanding of their gradual disappearing and proposes a way to restore these methods for long term utility and value The first three innovations dominated the industry till the mid 1970s Surprisingly the reason for them being replaced is the same research of the routine was misleading regardless of its ingenuity In the fourth case CAD does not support CAPP Computer Aided Process Planning and thus Numerical Control could no longer support developments of a system such as a flexible and automated factory However they incorporate many features in a specific resource instead within a manufacturing system CAD technology and machining centers remain remarkable as a specific unique manufacturing resource This work proposes ways to revive these innovations for the future Innovation is a driver for the development of new products and production methods It should be an integral part of a system and not pursued for its own sake This volume shows explains and remedies this by treating these interesting examples
