On Overlapping Generations Models with Productive Capital Günther Lang, 2012-12-06 This book was born out of a five years

research at Sonderforschungsbe reich 303 by the Deutsche Forschungsgemeinschaft DFG at Rheinische Friedrich Wilhelms Universitiit Bonn and was approved as my doctoral thesis by the Rechts und Staatswissenschaftliche Fakultiit in December 1994 It was my former colleague Wolfgang Peters who had drawn my atten tion to overlapping generations models and to problems of intergenerational efficiency and distribution The subtle connection between the latter two has been fascinating me from the very beginning redistribution of the results of free trade can become necessary from the point of view of efficiency although no externalities hamper the development of an economy In spite of being a matured part of economics neoclassical growth theory had left many questions unsolved some of them even unrecognized by a large part of our profession I took up the challenge to contribute to the investigation of some of these thorny problems One of these issues is the often quoted idea of the inter generational con tract Although intergenerational transfers can improve intertemporal effi ciency the design of pension schemes to achieve an improvement of well being of some generations without hurting that of any other is not an easy task in an economy with flexible prices Quite frequently only interest rate and growth rate are taken into account when deciding on whether a generation wins or loses

Project and Policy Evaluation in Transport Liana Giorgi, Alan Pearman, Annuradha Tandon, Dimitrios Tsamboulas, 2017-11-22 This title was first published in 2002 There is a multitude of assessment methods available for analyzing and reporting on the impacts of policies all with different underlying assumptions and a wide range of criteria Since the 1950s much research has gone into creating guidelines for policy analysis yet only a small percentage of evaluation has been carried out on transport policy and none by political scientists or social policy specialists The editors of this volume recognize that European integration has seen a drive to bring policy evaluation on to the transport agenda and has increased demands for strategic assessments It has become apparent that to gain a fuller understanding of the success of a transport programme a much more complex combination of analytical methods must be used and a set of guidelines specifically for the field of transport must be developed This book achieves this by bringing together a multidisciplinary team of analysts from throughout the EU to discuss in a much broader way the various types of assessment methods and how they can best be used to evaluate transport programmes and systems both individually and in combination
