Growth Fetish:

Growth Fetish Clive Hamilton, 2003 Accessible critique of Western society under capitalism by leading scholar **The Hegemony of Growth** Matthias Schmelzer, 2016-05-17 The first comprehensive historical overview of the OECD's role in the concept of economic growth becoming an international norm **Confronting Desire** Ilan Kapoor, 2020-09-15 By applying psychoanalytic perspectives to key themes, concepts and practices underlying the development enterprise, *Confronting Desire* offers a new way of analyzing the problems, challenges and potentialities of international development. Ilan Kapoor makes a compelling case for examining development's unconscious desires and, in the process, inaugurates a new field of study: psychoanalytic development studies. Drawing from the work of Jacques Lacan and Slavoj Žižek as well as from psychoanalytic, postcolonial and feminist scholarship, Kapoor analyzes how development's unconscious desires speak out most often in excessive and unpredictable ways that contradict the outwardly rational declarations of its practitioners. He investigates development's many irrationalities, from obsessions about growth and poverty to the perverse seductions of racism and overconsumption. By deploying key psychoanalytic concepts—enjoyment, fantasy, antagonism, fetishism, envy, drive, perversion and hysteria—*Confronting Desire* critically analyzes important issues in development: growth, poverty, inequality, participation, consumption, corruption, gender, race, LGBTQ politics, universality and revolution. *Confronting Desire* offers prescriptions for applying psychoanalysis to development theory and practice and demonstrates how psychoanalysis can provide fertile ground for radical politics and the transformation of international development. **The Bridge at the Edge of the World** James Gustave Speth, 2008-01-01 Presents an analysis of modern capitalism and its impact on the global environmental crises and discusses how the transformation of current economic and political systems can lead to environmental sustainability.

Climate Church, Climate World Jim Antal, 2023-03-06 Climate Church Climate World contends that climate change is the greatest moral challenge humanity has ever faced Hunger refugees poverty inequality deadly viruses war climate change multiplies all forms of global social injustice Environmental advocate Rev Jim Antal calls on the church to meet this moral challenge to embrace a new vocation so that future generations might live in harmony with God s creation Antal proposes how people of faith can embrace new approaches to worship preaching witnessing and other spiritual practices that honor creation and cultivate hope This revised and updated edition includes a new chapter on political and policy shifts under the Trump and Biden administrations the influence of Greta Thunberg and climate change activists and updated information on the current science

of climate change The Political Prospects of a Sustainability Transformation Daniel Hausknost, Marit Hammond, 2021-06-14 Half a century ago many democratic states started to respond to environmental pressures that had arisen in the wake of rapid industrialization. They set up environmental ministries and agencies and issued legislation to control the pollution of air and water and to manage industrial processes, wastes and toxic substances. This was the birth of the environmental state. With planetary ecological challenges like climate change spiraling out of control and dwarfing the environmental state's classical tasks of environmental management, new questions about the transformative capacities of the state are becoming acute today. How large is the state's capability to transform enhanced industrial societies into sustainable post-carbon societies? Do its new environmental functions empower the state to prioritise ecological goals over economic growth? Can the state's environmental management capabilities be radicalised to turn it into a sustainability state? Can democracies be enhanced to enlarge the state's transformative capacities? *The Political Prospects of a Sustainability Transformation: Moving Beyond the Environmental State* explores these and other questions from a variety of theoretical and empirical angles, covering the fields of democratic theory, theories of the state, political economy, political sociology, rhetoric and political philosophy. The chapters in this book were originally published as a special issue of the journal *Environmental Politics*.

Global Environmental Governance James Gustave Speth And Peter M. Haas, 2007-09 *Global Environmental Governance* examines ten major environmental threats: climate disruption, biodiversity loss, acid rain, ozone depletion, deforestation, desertification, freshwater degradation and shortages, decline of marine fisheries, toxic pollutants and excess nitrogen, and explores how they can be addressed through treaties, governance regimes and new forms of international cooperation. It also critically examines the serious shortcomings of current efforts and the underlying reasons for the persistence of disturbing trends. This book presents key concepts in international law and regime formation in simple, accessible language and describes the current institutional landscape, lessons learned and new directions needed in international governance.

Secular Stagnation Theories Christina Anselmann, 2020-04-17 In light of weak economic performances and rising income disparities across the developed world during the past decades this book provides a comprehensive overview of secular stagnation theories in the history of economic thought and examines the role of income distribution in various stagnation hypotheses By offering a historical perspective from the classical economists to the most recent stagnation debate of the early twenty first century the author shows that most stagnation theories were developed in periods of high and or rising income disparities Eventually it was Josef Steindl one of the least recognized stagnationists in the history of economic thought who put the distribution of income at the heart of his stagnation theory While Josef Steindl focused on the nexus between the functional distribution of income and economic growth this book includes the personal distribution of income in a Kaleckian Steindlian model of economic growth and stagnation In the model presented the nexus between economic growth and the distribution of income is a priori uncertain depending on the type of economic shock and the specific economic circumstances The author also discusses various empirically oriented policy implications aimed at fostering both economic growth and a more equal distribution of income This book appeals to scholars in economics and the history of economic thought interested in economic growth secular stagnation and income distribution

Climate Change as Class War Matthew T. Huber, 2022-05-10 How to build a movement to confront climate change The climate crisis is not primarily a problem of believing science or individual carbon footprints it is a class problem rooted in who owns controls and profits from material production As such it will take a class struggle to solve In this ground breaking class analysis Matthew T Huber argues that the carbon intensive capitalist class must be confronted for producing climate change Yet the narrow and unpopular roots of climate politics in the professional class is not capable of building a movement up to this challenge For an alternative strategy he proposes climate politics that appeals to the vast majority of society the working class Huber evaluates the Green New Deal as a first attempt to channel working class material and ecological interests and advocates building union power in the very energy system we need to dramatically transform In the end as in classical socialist movements of the early 20th Century winning the climate struggle will need to be internationalist based on a form of planetary working class solidarity

The Routledge Companion to Alternative Organization Martin Parker, George Cheney, Valérie Fournier, Chris Land, 2014-01-03 Despite the Great Recession slightly different forms of global capitalism are still portrayed as the only game in town by the vast majority of people in power in the world today Unbridled growth trade liberalisation and competition are advocated as the only or best ways of organizing the contemporary world Unemployment yawning gaps between rich and poor political disengagement and environmental devastation are too often seen as acceptable side effects of the dominance of neo liberalism But the reality is that capitalism has always been contested and that people have created many other ways of providing for themselves This book explores economic and organizational possibilities which extend far beyond the narrow imagination of economists and management theorists Chapters on co operatives community currencies the transition movement scrounging co housing and much more paints a rich picture of the ways in which another world is not only possible but already taking shape The aim of this companion is to move beyond complaining about the present and into exploring this diversity of organisational possibilities Our starting point is a critical analysis of contemporary global capitalism is merely the opening for thinking about organizing as a form of politics by other means and one that can be driven by the values of solidarity freedom and responsibility This comprehensive companion with an international cast of contributors gives voice to forms of organizing which remain unrepresented or marginalised in organizational studies and conventional politics yet which offer more promising grounds for social and environmental justice It is a valuable resource for students activists and researchers interested in alternative approaches to economy and society in a variety of disciplinary and interdisciplinary fields
