Growing Points In Ethology:

Growing Points Ethology P. P. G. Bateson, R. A. Hinde, 1976-10-07 First published in 1976 this volume is a collection of essays by some of the most prominent and active ethologists. It is organized into four sections: motivation and perception, function and evolution, development and human social relationships. The first three sections reflect the four questions which are basic to ethology: what were the immediate causes of a behaviour pattern? what is its biological function? how did it evolve? and how did it develop in the individual? The last section involves questions of all four types. The sections are introduced and linked by editorials and the book concludes with an important statement on asking the right questions. The essays are forward looking and identify areas of importance for the study of behaviour. The volume is a source of formative ideas for students, their teachers and research workers in a wide variety of disciplines in the biological, psychological and social sciences.

Social Competence in Developmental Perspective B.H. Schneider, Grazia Attili, Jacqueline Nadel, Roger P. Weissberg, 2012-12-06 What determines the focus of a researcher's interest? the sources of inspiration for a study or the variables scrutinized? If we were to examine the antecedents of these decisions they would surely emerge as accidents of circumstance: the personal experiences of the researcher, the inspiration of early mentors, the influence of contemporary colleagues, all tempered by the intellectual currents that nurture the researcher's hypotheses. Among the accidents that mold the careers of researchers is geographic location. The culture in which a research program emerges helps determine both its very subject and its method. The primary purpose of this book is to assist those interested in the scientific study of children's social competence in transcending the boundaries imposed both by geography and by selective exposure to the highly diverse schools of thought that have led to interest in this field. Most of these ideas were presented and exchanged at an Advanced Study Institute entitled *Social Competence in Developmental Perspective* held in Savoie, France, in July 1988. This Institute was attended by scholars from France, England, Northern Ireland, Germany, Italy, Norway, Spain, Portugal, Netherlands, Canada, the United States and Brazil. Those who participated will recognize that the metamorphosis from lecture to chapter has necessitated many changes. In order to accommodate the reader who may be unfamiliar with the field, more attention has been paid here to identifying the theoretical contexts of the research described.

Evolution of Animal Behavior Matthew H. Nitecki, Jennifer A. Kitchell, 1986-08-14 This volume highlights current research in the field of animal behavior with an emphasis on evolutionary perspectives. The contributors represent paleontological field and experimental approaches. They focus on a series of studies that confront wide ranging issues including sexual selection, mate choice, differential parental investment, apparent altruism, cooperative behavior and the relevance of phylogenetic constraints and historical information. The volume will be of special interest to evolutionary biologists, behavioral ecologists and paleontologists.

A Just Peace Through Transformation Chadwick Alger, 2021-11-18 These are the Proceedings of the International Peace Research Association Eleventh General Conference in

1988 Covering subjects such as Societal Foundations of Peace The Problems of Peace Research The Impact of the Peace Movement on Public Opinion and others Behavioral Development Klaus Immelmann, George W. Barlow, Lewis Petrino, Mary Biggar Main, 1981-11-30 **Developing a Social Psychology of Monkeys and Apes** John Chadwick-Jones, 2025-01-06 Originally published in 1998 the aim of Developing a Social Psychology of Monkeys and Apes was to draw attention to the exciting progress of studies of the social psychology of monkeys and apes happening at the time It is written with a clear style which should invite interest from a wide range of social scientists The relatedness of humans and non human primates that was usually considered in its genetic forms is followed through into the complex social tactics of monkeys and apes The focus of the book was on the latest research as it had developed out of earlier classic studies The wave of researchers working on social topics at the time is especially emphasized This book will be of particular interest to primatologists ethologists anthropologists zoologists social psychologists and students of social cognition and social interaction For students the appendices provide useful information on the variety of social structures of Old World and New World monkeys and apes The Evolutionary Neuroethology of Paul MacLean Gerald A. Cory Jr., Russell Gardner Jr., 2002-12-30 In the mid 20th century integrative efforts began concerning the brain and its social and humanistic functions These efforts were led by Paul D MacLean s integrative research and thought As the century ended however such efforts were lost in the surge of new effort in brain and genome research Nobel Prizes were awarded on biochemical and cellular findings relevant to psychiatry Findings on these levels seemed to provide ultimate answers By contrast Cory Gardner and their contributors provide a more comprehensive view by extending MacLean s findings and integrative theory Supported by new findings and extended by critical analyses of current work the collection provides foundations for more integrative efforts that the editors and contributors believe will prevail increasingly in coming decades Looked at from another vantage point therapeutic social economic and political sciences have proceeded without operating theories congruent with or based on brain functions Across species perspectives have been lacking This collection redresses this problem and leads the way toward more comprehensive 21st century research on the one hand and practical applications on the other Multiple approaches extend from modeling efforts to across species comparisons to the basic science of psychiatry to theoretical explanations of political and economic systems But most important these essays abolish the Berlin wall that currently separates the brain from its social functions A major guide for scholars students and researchers involved in the neurobehavioral sciences for psychologists psychiatrists and others involved with human clinical sciences and for social scientists concerned with the impact of the nervous system and its function **Sociobiology: Beyond Nature/nurture?** George W Barlow, James Silverberg, Frank B Livingstone, 2019-06-26 To most biologists sociobiology represents the concept of strict Darwinian individual selection married to an analytical application of ecological principles and brought to bear on social behavior in an unusually exciting and productive way Joining the biologists are a small number of social scientists But

there are radically divergent views as to how the field should be delimited and sociobiology is one of the most widely discussed fields in biology and anthropology today The symposium on which this book is based was arranged by a biologist and an anthropologist The participants leaders in their fields ably present contrasting and responsible views on current issues This is the first collection of essays on sociobiology in which opposing views are aired It is an exciting timely book and an important historical document From Animals to Animats 3 Dave Cliff,1994 August 8 12 1994 Brighton England From Animals to Animats 3 brings together research intended to advance the front tier of an exciting new approach to understanding intelligence The contributors represent a broad range of interests from artificial intelligence and robotics to ethology and the neurosciences Unifying these approaches is the notion of animat an artificial animal either simulated by a computer or embodied in a robot which must survive and adapt in progressively more challenging environments The 58 contributions focus particularly on well defined models computer simulations and built robots in order to help characterize and compare various principles and architectures capable of inducing adaptive behavior in real or artificial animals Topics include Individual and collective behavior Neural correlates of behavior Perception and motor control Motivation and emotion Action selection and behavioral sequences Ontogeny learning and evolution Internal world models and cognitive processes Applied adaptive behavior Autonomous robots Hierarchical and parallel organizations Emergent structures and behaviors Problem solving and planning Goal directed behavior Neural networks and evolutionary computation Characterization of environments A Bradford Book Developmental Psychobiology and Developmental Neurobiology Elliott M. Blass,2013-03-07 **The Development and Integration of Behaviour** Paul Patrick Gordon Bateson,1991-05-30 What regularities lie behind the development and organization of behaviour in animals and humans One theme emerging from this book is that ideas have to flow in both directions between the different levels of analysis between the neural and behavioural levels and between the individual and the social group Another theme is that it is not enough to identify the many factors operating in the development and integration of behaviour The processes must also be studied directly Bringing together work at different levels and studying behavioural dynamics require more knowledge and expertise than any one person can usually command Links have to be made between different disciplines and specialists have to learn to work with others who speak with what at first seem to be mutually incomprehensible scientific languages The book illustrates how this may be achieved The themes of this book are strongly related to the approach of Robert Hinde in whose honour the chapters were written Infant Development Michael E. Lamb,Heidi Keller,2019-01-04 Most German speaking researchers in the area of infant development are familiar with the research conducted in English However most English speaking researchers are relatively unaware of the work currently being done in German This volume is designed to remedy this imbalance and to promote international collaboration The book's contributors an exciting and innovative group of German speaking scholars provide up to date summaries of theoretical methodological and empirical perspectives on development They review evidence

and present points of view of great interest to all people who are committed to furthering our collective understanding of development in infancy Human Paleopsychology K. Bailey,2013-08-21 First Published in 1986 In this book the author seeks to demonstrate his believe that any credible view must grapple not only with human distinctiveness e g learning capacity language rationality and culture but the dark sides of senseless violence and social disorder as well Any such grappling with the dark side must necessarily confront our animal natures as well as our distinctly human natures

A. Collins,2014-03-18 First published in 1982

This thirteenth volume in The Minnesota Symposia on Child Psychology set invites six developmental scholars were to present their work within the programmatic perspective in which it was conceived The contributors to this volume work within the area of developmental social psychology encompassing the range of problems surrounding the development of social relations social cognition and affective systems There is variation not only in the domains of interest but in the methods and the ages of the participants in the research within this volume *The Animal-human Boundary* Angela N. H. Creager,William C. Jordan,2002 An examination of the difficulties in fundamentally differentiating humans from all other animals

The New Anthropomorphism John S. Kennedy,1992-07-16 In this 1992 book John Kennedy s point is that explicit anthropomorphism was well nigh killed by fierce criticism from the radical Behaviourists but that we have to recognize that today there is a new anthropomorphism which is much harder to avoid because it is unintended and largely unconscious For that reason even those who if they were asked would firmly reject anthropomorphism nevertheless unwittingly slip into it from time to time This book contains nineteen essays on behavioural concepts which have seldom been identified as anthropomorphic but in fact bear that connotation and lead to mistakes Some of these such as search images in birds and the learning of grammatical language by apes have been seen through as errors after a time A greater number such as efference copy goal directedness cognition and suffering in animals are still current though not yet regarded as erroneous The final chapter outlines things we can do to minimise the damage it does to the causal analysis of animal behaviour **The Wiley-Blackwell Handbook of Childhood Social Development** Peter K. Smith,Craig H.

Hart,2013-12-04 The Wiley Blackwell Handbook of Childhood Social Development Second Edition presents an authoritative and up to date overview of research and theory concerning a child s social development from pre school age to the onset of

adolescence Presents the most up to date research and theories on childhood social development Features chapters by an international cast of leaders in their fields Includes comprehensive coverage of a range of disciplinary perspectives Offers all new chapters on children and the environment cultural influences history of childhood interventions and neuro psychological perspectives Represents an essential resource for students and researchers of childhood social development Nurturing the Premature Infant Edward Goldson,1999-04-29 As more premature infants survive the immediate neonatal period and require prolonged periods of hospitalization researchers in fetal development and infancy have begun to reassess the strategies for their care In the past the focus of neonatal intensive care was to sustain life with little attention to the quality and implications of survival Today however researchers and clinicians are seeking to enhance the development of these small infants by ameliorating the effects of extreme prematurity and the associated medical and surgical complications This book reports the work of leading researchers who have begun to use a variety of developmental interventions in the management of small infants in neonatal intensive care units
