Growth and Development with Special Reference to Domestic Animals Albert Garland Hogan, Andrew Edward Murneek, Claude O. Brannen, Eva May Davis, Frederick Francis McKenzie, Harry Laverne Kempster, Irl Thorpe Scott, Richard Vincent Lott, Samuel Brody, William Herbert Eddy Reid, 1926 Hormones and Reproduction of Vertebrates, Volume 5 David O. Norris, Kristin H. Lopez, 2011-05-04 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them **Proteins as Human Food** R. A. Lawrie, 2016-07-29 Proteins as Human Food is a collection of studies that discuss the importance of inclusion of protein in human diet the problems that cause and may arise from its insufficiency and its solutions The book is divided into seven parts Part I covers topics related to the world supply and demand of protein such as problems related to the surplus and deficiency of protein production nutrition policy with regard to protein and methods on how to meet the world's protein needs Part II tackles the preservation of protein and processing as well as the altering effects of toxic agents and microorganisms on protein Parts III IV and V respectively deals with the different animal plant and other unconventional sources of protein their properties and quality control Part VI talks about the organoleptic qualities of protein foods and protein problems in large scale catering and Part VII covers regulatory mechanism in mammalian protein metabolism effects of disproportionate amounts of amino acids and the evaluation of protein The text is recommended for nutritionists and chemists who would like to know more about the advancements in the studies of protein its relevance to diet and the solution to problems related to it **From Ecology to Brain Development: Bridging Separate Evolutionary Paradigms** Francisco Aboitiz, Miguel L. Concha, Christian González-Billault, Jorge Mpodozis, 2018-09-14 The nervous system is the product of biological evolution and is shaped by the interplay between extrinsic factors determining the ecology of animals and by intrinsic processes that dictate the developmental rules that give rise to adult functional structures This special topic is oriented to develop an integrative view from behavior and ecology to

neurodevelopmental processes We address questions such as how do sensory systems evolve according to ecological conditions How do neural networks organize to generate adaptive behavior How does cognition and brain connectivity evolve What are the developmental mechanisms that give rise to functional adaptation Accordingly the book is divided in three sections i Evolution of sensorimotor systems ii Cognitive computations and neural circuits and iii Development and brain evolution We hope that this initiative will support an interdisciplinary program that addresses the nervous system as a unified organ subject to both functional and developmental constraints where the final outcome results of a compromise between different parameters rather than being the result of several single variables acting independently of each other

Development Strategies and Biodiversity David Costantini, Valeria Marasco, 2022-02-15 Development is a complex and highly dynamic process involving the cross talk among genes maternal effects and environmental circumstances Widespread evidence from plant to animal species show that variation in developmental conditions can modulate life history trajectories and influence key traits such as growth reproduction and senescence These effects are not limited to a single generation but can also be passed on future generations This book aims to bring together studies of early life effects from the fields of evolutionary biology global change biology and biomedicine to synthesise and improve current knowledge of the mechanisms involved and how variation in early life conditions translates into Darwinian fitness outcomes Relying on examples of organisms responses to the ongoing and future environmental challenges of the Anthropocene this book takes a novel approach to address the adaptive meaning of early life effects The book has a broad scientific approach targeting eco evolutionary biologists behavioural biologists eco physiologists eco toxicologists as well as epidemiologists and biomedical scientists

Heidt, 1990-01-01 Heavily illustrated with color photographs *Arkansas Mammals* is the comprehensive guide to the state's mammal population Endangered or threatened species of mammals and missing species known to have been present in recent times are discussed along with non native species that have become an important part of the mammal fauna in Arkansas and adjacent states

Robustness, Plasticity, and Evolvability in Mammals Clara B. Jones, 2012-06-06 Among the unresolved topics in evolutionary biology and behavioral ecology are the origins mechanisms evolution and consequences of developmental and phenotypic diversity In an attempt to address these challenges plasticity has been investigated empirically and theoretically at all levels of biological organization from biochemical to whole organism and beyond to the population community and ecosystem levels Less commonly explored are constraints e.g ecological costs e.g increased response error perturbations e.g alterations in selection intensity and stressors e.g resource limitation influencing not only selective values of heritable phenotypic components but also decisions and choices not necessarily conscious ones available to individuals in populations Treating extant mammals the primary purpose of the proposed work is to provide new perspectives on common themes in the literature on robustness functional diversity differential resistance to deconstraint of

conserved elements and weak robustness the potential to restrict plasticity and evolvability plasticity variation expressed throughout the lifetimes of individuals in a population setting evolvability potential and evolvability non lethal phenotypic novelties induced by endogenous and or exogenous stimuli The proposed project will place particular emphasis upon the adaptive complex in relation to endogenous e g genomes neurophysiology and exogenous abiotic and biotic including social environments organismal features discussed as regulatory and environmental perturbations with the potential to induce and often constrain variability and novelty of form and function BLL Conference Index, 1964-1973 British Library. Lending Division,1974 The Role of Apoptosis in Development, Tissue Homeostasis and Malignancy R.M. Dexter,A.H. Wyllie,M.C. Raff,2012-12-06 The past five years have witnessed a remarkable development of interest in cell death from inside out After 30 years of relative obscurity its quantitative importance in the building and maintenance of normal tissues the subtle strategies involved in its regulation and its significance in the pathogenesis of diseases of major social importance are becoming clear Moreover because a distinct set of biological events is involved in this death these events themselves become reason able targets for new pharmacological agents in the treatment of cancer The articles in this volume summarize the contents of a discussion meeting held at the Royal Society on 23 and 24 February 1994 The authors are a distinguished international group from a variety of disciplines in biology and medicine and hopefully their articles will convey something of the excitement of this fast moving field The three organizers are enormously indebted to all the contributors for the enthusiasm with which they delivered their talks shared in discussion and finally committed their contributions to these printed pages We would also like to acknowledge the gracious way in which the Royal Society hosted the meeting and in particular Mary Manning for making it the trouble free and enjoyable experience that it was and Janet Clifford and Simon Gribbin for skillfully managing the editorial processing of this volume Michael Dexter June 1994 Martin Raff Andrew Wyllie x

Geor,Patricia Harris,Manfred Coenen,2013-01-31 Equine Applied and Clinical Nutrition is a comprehensive text resource on the nutrition and feeding management of horses Over 20 experts from around the world share their wisdom on a topic of central relevance to all equine practitioners and the equine community generally Both basic and applied including healthy and diseased animals nutrition and feeding management of horses and other equids i e ponies donkeys wild equids are covered The book will appeal to a wide audienc undergraduate and post graduate students in equine science and veterinary medicine veterinarians equine nutritionists horse trainers and owners The clinical component will strengthen the appeal for equine veterinarians Equine Applied and Clinical Nutrition will be a must have for anyone involved in the care of horses ponies and other equids The book is divided into 3 parts Basic or core nutrition in this context refers to digestive physiology of the horse and the principles of nutrition Applied nutrition deals with the particular types of foods and how to maintain an optimum diet through various life stages of the horse You might characterize this aspect as prevention of disease through diet Clinical

nutrition covers various diseases induced by poor diet and their dietary treatment and management It also looks at specific feeding regimes useful in cases disease not specifically induced by diet Authoritative international contributions Strong coverage of clinical aspects either omitted from or only sparsely dealt with elsewhere Full colour throughout The only clinical equine nutrition book *Oxidative Stress and Hormesis in Evolutionary Ecology and Physiology* David

Costantini,2014-03-27 This book discusses oxidative stress and hormesis from the perspective of an evolutionary ecologist or physiologist In the first of ten chapters general historical information definitions and background of research on oxidative stress physiology hormesis and life history are provided Chapters 2 10 highlight the different solutions that organisms have evolved to cope with the oxidative threats posed by their environments and lifestyles The author illustrates how oxidative stress and hormesis have shaped diversity in organism life histories behavioral profiles morphological phenotypes and aging mechanisms The book offers fascinating insights into how organisms work and how they evolve to sustain their physiological functions under a vast array of environmental conditions *Current Perspectives on Insulin-like Growth Factor Binding*

Protein (IGFBP) Research Andreas Hoeflich,John Pintar,Briony Forbes,2019-02-06 The family of IGFBPs has been developed by the duplication of genes and genomes and contributes to genetic and functional diversity Due to the different protein domains present in the molecule IGFBPs can be seen as mediators of tissue specific IGF functions However IGFBPs also have IGF independent functions both inside and outside the cell These diverse genetic molecular and functional aspects of IGFBPs are discussed within this Research Topic Accumulating data provide evidence for the regulation of IGFBP functions by proteases which may acutely regulate bioactivity of the IGFs However during proteolytic degradation IGFBP fragments with novel functions can also be formed and are located both intra and extracellularly Distinct IGFBP fragments can even be found in the perinuclear compartment or within the nucleus where they can impact on gene expression Several contributions presented in the current Research Topic particularly stress the relevance of structural aspects in IGFBP research The current lack of comprehensive structural information is dramatically limiting the biomarker potential of particular IGFBPs Finally the Research Topic also provides novel functions of the IGFBP family from model organisms farm animals and humans Thereby the biomarker potential not only relates to normal and malignant growth but also to metabolism and animal welfare One important aim of the Research Topic is to encourage next generation IGFBP research reflecting subject individual conditional and hormonal parameters but also structural aspects of the IGFBPs **Insect Development** Lawrence I.
