Finite Fields Coding Theory And Advances In Communications And Computing:

Finite Fields, Coding Theory, and Advances in Communications and Computing Gary L. Mullen,Peter Jau-Shyong Shiue,1992-10-29 The refereed proceedings of the First International Conference on Finite Fields Coding Theory and Advances in Communications and Computing The volume aims to encourage interaction between the theoretical aspects of finite fields and applications in many areas including information theory **Finite Fields and Applications** Dieter Jungnickel,H. Niederreiter,2001-03-20 This volume represents the refereed proceedings of the Fifth International Conference on Finite Fields and Applications F q5 held at the University of Augsburg Germany from August 2 6 1999 and hosted by the Department of Mathematics The conference continued a series of biennial international conferences on finite fields following earlier conferences at the University of Nevada at Las Vegas USA in August 1991 and August 1993 the University ofGlasgow Scotland in July 1995 and the University ofWaterloo Canada in August 1997 The Organizing Committee of F q5 comprised Thomas Beth University ofKarlsruhe Stephen D Cohen University of Glasgow Dieter Jungnickel University of Augsburg Chairman Alfred Menezes University of Waterloo Gary L Mullen Pennsylvania State University Ronald C Mullin University of Waterloo Harald Niederreiter Austrian Academy of Sciences and Alexander Pott University of Magdeburg The program ofthe conference consisted offour full days and one halfday ofsessions with 11 invited plenary talks andover80contributedtalks that re quired three parallel sessions This documents the steadily increasing interest in finite fields and their applications Finite fields have an inherently fasci nating structure and they are important tools in discrete mathematics Their applications range from combinatorial design theory finite geometries and algebraic geometry to coding theory cryptology and scientific computing A particularly fruitful aspect is the interplay between theory and applications which has led to many new perspectives in research on finite fields **Finite Fields: Theory and Computation** Igor Shparlinski,2013-03-09 This book is mainly devoted to some computational and algorithmic problems in finite fields such as for example polynomial factorization finding irreducible and primitive polynomials the distribution of these primitive polynomials and of primitive points on elliptic curves constructing bases of various types and new applications of finite fields to other areas of mathematics For completeness we in clude two special chapters on some recent advances and applications of the theory of congruences optimal coefficients congruential pseudo random number gener ators modular arithmetic etc and computational number theory primality testing factoring integers computation in algebraic number theory etc The problems considered here have many applications in Computer Science Cod ing Theory Cryptography Numerical Methods and so on There are a few books devoted to more general questions but the results contained in this book have not till now been collected under one cover In the present work the author has attempted to point out new links among different areas of the theory of finite fields It contains many very important results which previously could be found only in widely scattered and hardly available conference proceedings and journals In particular we extensively review results which originally appeared only in Russian

and are not well known to mathematicians outside the former USSR *Handbook of Finite Fields* Gary L. Mullen,Daniel Panario,2013-06-17 Poised to become the leading reference in the field the Handbook of Finite Fields is exclusively devoted to the theory and applications of finite fields More than 80 international contributors compile state of the art research in this definitive handbook Edited by two renowned researchers the book uses a uniform style and format throughout and

Coding Theory and Applications Angela Barbero,2008-08-26 It is a pleasure to welcome you to the proceedings of the second International Castle Meeting on Coding Theory and its Applications held at La Mota Castle in Medina del Campo The event provided a forum for the exchange of results and ideas which we hope will foster future collaboration The rst meeting was held in 1999 and encouraged by that experience we now intend to hold the meeting every three years Springer kindly accepted to publish the proceedings volume you have in your hands in their LNCS series The topics were selected to cover some of the areas of research in Coding Theory that are currently receiving the most attention The program consisted of a mixture of invited and submitted talks with the focus on quality rather than quantity A total of 34 papers were submitted to themeeting Afteracarefulreviewprocessconductedbythescienti ccommittee aided by external reviewers we selected 14 of these for inclusion in the current volume along with 5 invited papers The program was further augmented by the remaining invited papers in addition to papers on recent results printed in a separate volume We would like to thank everyone who made this meeting possible by helping with the practical and scienti c preparations the organization committee the scienti c committee the invited speakers and the many external reviewers who shall remain anonymous I would especially like to mention the General Advisor ofthe meeting yvindYtrehus Finally Iextend mygratitudeto allthe authors and participants who contributed to this meeting *Handbook of Algebra* ,1995-12-18 Handbook of Algebra defines algebra as consisting of many different ideas concepts and results Even the nonspecialist is likely to encounter most of these either somewhere in the literature disguised as a definition or a theorem or to hear about them and feel the need for more information Each chapter of the book combines some of the features of both a graduate level textbook and a research level survey This book is divided into eight sections Section 1A focuses on linear algebra and discusses such concepts as matrix functions and equations and random matrices Section 1B cover linear dependence and discusses matroids Section 1D focuses on fields Galois Theory and algebraic number theory Section 1F tackles generalizations of fields and related objects Section 2A focuses on category theory including the topos theory and categorical structures Section 2B discusses homological algebra cohomology and cohomological methods in algebra Section 3A focuses on commutative rings and algebras Finally Section 3B focuses on associative rings and algebras This book will be of interest to mathematicians logicians and computer scientists
