National Fire Academy, 2001 **Fire on Earth** Andrew C. Scott, David M. J. S. Bowman, William J. Bond, Stephen J. Pyne, Martin E. Alexander, 2013-10-31 Earth is the only planet known to have fire The reason is both simple and profound fire exists because Earth is the only planet to possess life as we know it Fire is an expression of life on Earth and an index of life's history Few processes are as integral unique or ancient Fire on Earth puts fire in its rightful place as an integral part of the study of geology biology human history physics and global chemistry Fire is ubiquitous in various forms throughout Earth and belongs as part of formal inquiries about our world In recent years fire literature has multiplied exponentially dedicated journals exist and half a dozen international conferences are held annually A host of formal sciences or programs announcing interdisciplinary intentions are willing to consider fire Wildfire also appears routinely in media reporting This full colour text containing over 250 illustrations of fire in all contexts is designed to provide a synthesis of contemporary thinking bringing together the most powerful concepts and disciplinary voices to examine in an international setting why planetary fire exists how it works and why it looks the way it does today Students lecturers researchers and professionals interested in the physical ecological and historical characteristics of fire will find this book and accompanying web based material essential reading for undergraduate and postgraduate courses in all related disciplines for general interest and for providing an interdisciplinary foundation for further study A comprehensive approach to the history behaviour and ecological effects of fire on earth Timely introduction to this important subject with relevance for global climate change biodiversity loss and the evolution of human culture Provides a foundation for the interdisciplinary field of Fire Research Authored by an international team of leading experts in the field Associated website provides additional resources Crew Cohesion, Wildland Fire Transition, and Fatalities Jon J. Driessen, 2002 Describes the role played by crew cohesion in the deaths of firefighters in three firefighting tragedies the Mann Gulch Fire the South Canyon Fire and the Thirtymile Fire Two types of cohesion are involved the cohesion within a crew intracrew cohesion and the cohesion among crews intercrew cohesion Cohesion is a way of describing how closely people feel they are tied to a group Studies of field crews in the Forest Service have shown that the less cohesion crews had the more likely they were to be involved in accidents Meanwhile studies of wildland firefighter fatalities during the 1990s have shown that nearly threefourths of the fatalities occurred when fires were making the transition from relatively small to relatively large fires or shortly after they had become relatively large fires The transition is often sudden when it is described as a blow up Driessen recommends studies that would allow the different types of transition fires to be classified This classification system would allow crew leaders and fire managers to communicate clearly when fires are making the transition from relatively small fires to relatively large fires The studies would also identify tactics that successful crew leaders use to build the essential level of crew cohesion when fires are in transition
