Vacca,2006-10-16 1 INTRODUCTION With the increasing deployment of wireless networks 802 11 architecture in enterprise environments IT enterprises are working to implement security mechanisms that are equivalent to those existing today for wire based networks An important aspect of this is the need to provide secure access to the network for valid users Existing wired network jacks are located inside buildings already secured from unauthorized access through the use of keys badge access and so forth A user must gain physical access to the building in order to plug a client computer into a network jack In contrast a wireless access point AP may be accessed from off the premises if the signal is detectable for instance from a parking lot adjacent to the building Thus wireless networks require secure access to the AP and the ability to isolate the AP from the internal private network prior to user authentication into the network domain Furthermore as enterprises strive to provide better availability of mission critical wireless data they also face the challenge of maintaining that data s security and integrity While each connection with a client a supplier or a enterprise partner can improve responsiveness and efficiency it also increases the vulnerability of enterprise wireless data to attack In such an environment wireless network security is becoming more important every day Also with the growing reliance on e commerce wireless network based services and the Internet enterprises are faced with an ever increasing responsibility to protect their systems from attack **Deep Learning Approaches to Cloud Security** Pramod Singh Rathore,Vishal Dutt,Rashmi Agrawal,Satya Murthy Sasubilli,Srinivasa Rao Swarna,2021-12-29 DEEP LEARNING APPROACHES TO CLOUD SECURITY Covering one of the most important subjects to our society today cloud security this editorial team delves into solutions taken from evolving deep learning approaches solutions allowing computers to learn from experience and understand the world in terms of a hierarchy of concepts with

Managing Information Security Errin W. Fulp,2013-08-21 The purpose of the firewall and its location is to have network connections traverse the firewall which can then stop any unauthorized packets A simple firewall will filter packets based on IP addresses and ports A useful analogy is filtering your postal mail based only on the information on the envelope You typically accept any letter addressed to you and return any letter addressed to someone else This act of filtering is essentially the same for firewalls This chapter refers to the secure network as the internal network the insecure network is the external network The remainder of this chapter provides an overview of firewall policies designs features and configurations Of course technology is always changing and network firewalls are no exception However the intent of this chapter is to describe aspects of network firewalls that tend to endure over time
