Levine, 2020-09-15 A novel logic based framework for representing the syntax semantics interface of natural language applicable to a range of phenomena In this book Yusuke Kubota and Robert Levine propose a type logical version of categorial grammar as a viable alternative model of natural language syntax and semantics They show that this novel logic based framework is applicable to a range of phenomena especially in the domains of coordination and ellipsis that have proven problematic for traditional approaches

Interpreted Languages and Compositionality Marcus Kracht, 2011-08-06 This book argues that languages are composed of sets of signs rather than strings This notion first posited by de Saussure in the early 20th century has for decades been neglected by linguists particularly following Chomsky's heavy critiques of the 1950s Yet since the emergence of formal semantics in the 1970s the issue of compositionality has gained traction in the theoretical debate becoming a selling point for linguistic theories Yet the concept of compositionality itself remains ill defined an issue this book addresses Positioning compositionality as a cornerstone in linguistic theory it argues that contrary to widely held beliefs there exist non compositional languages which shows that the concept of compositionality has empirical content The author asserts that the existence of syntactic structure can flow from the fact that a compositional grammar cannot be delivered without prior agreement on the syntactic structure of the constituents
