Grammatical Relations A Crosstheoretical Perspective:

Grammatical Relations Patrick Farrell, 2005-07-01 Patrick Farrell shows how grammatical relations are characterized in competing theories of grammar and reveals the different theories merits and limitations He compares mainstream generative transformational theory with formalist and functionalist approaches showing points of convergence and divergence This is an ideal introduction to the field for graduate students and will be a useful reference for theoretical syntacticians of all persuasions Grammatical Relations Katarzyna Dziwirek, Patrick Farrell, Errapel

Mejías-Bikandi, 1991-01-01 In recent years grammatical relations have come to play a prominent role in linguistic theories This volume brings together papers that address a variety of theoretical issues involving grammatical relations drawing on data from a broad range of natural languages Many of the papers employ analytical devices from linguistic theories such as relational grammar arc pair grammar lexical functional grammar government and binding theory or head driven phrase structure grammar Other papers take a more eclectic stance The contributors include Farrell Ackerman Chris Barker Joan Bresnan Diana Cresti Christopher Culy William D Davies Anna Maria di Sciullo Stanley Dubinsky Katarzyna Dziwirek Patrick Farrell Kazuhiko Fukushima Andrew Garrett Donna Gerdts Jorge Hankamer Ki Sun Hong Eloise Jelinek Geraldine Legendre Errapel Mejias Bikandi William McClure Ignazio Mirto John Moore Rosanne Pelletier Marial Polinsky Paul Postal Eduardo Raposo Richard Rhodes Carol Rosen Sara Thomas Rosen Peter Sells Juan Uriagereka Lindsay Whaley and Annie Zaenen Katarzyna Dziwirek is a graduate student in linguistics at the University of California San Diego Patrick Farrell is acting assistant professor of linguistics at the University of California San Diego Errapel Mejias Bikandi is a graduate student in linguistics at the University of California San Diego Routledge Library Editions: Linguistics Various, 2021-12-02

Routledge Library Editions Linguistics brings together as one set mini sets or individual volumes a series of previously out of print classics from a variety of academic imprints With titles ranging from Applied Linguistics and Language Learning to Experimental Psycholinguistics and Sociolinguistics Today International Perspectives this set provides in one place a wealth of important reference sources from a wide range of authors expert in the field **The MIT Encyclopedia of the**

Cognitive Sciences (MITECS) Robert A. Wilson, Frank C. Keil, 2001-09-04 Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition The MIT Encyclopedia of the Cognitive Sciences MITECS is a landmark comprehensive reference work that represents the methodological and theoretical diversity of this changing field At the core of the encyclopedia are 471 concise entries from Acquisition and Adaptationism to Wundt and X bar Theory Each article written by a leading researcher in the field provides an accessible introduction to an important concept in the cognitive sciences as well as references or further readings Six extended essays which collectively serve as a roadmap to the articles provide overviews of each of six major areas of cognitive science Philosophy Psychology Neurosciences Computational Intelligence Linguistics and Language and Culture Cognition and Evolution For both students

and researchers MITECS will be an indispensable guide to the current state of the cognitive sciences *Human Computer Interaction: Concepts, Methodologies, Tools, and Applications* Ang, Chee Siang, Zaphiris, Panayiotis, 2008-10-31 Penetrates the human computer interaction HCI field with breadth and depth of comprehensive research **Papers of the Forty-Third Algonquian Conference** Monica Macaulay, J. Randolph Valentine, 2015-05-01 Papers of the forty third Algonquian Conference held at University of Michigan in October 2011 The papers of the Algonquian Conference have long served as the primary source of peer reviewed scholarship addressing topics related to the languages and societies of Algonquian peoples Contributions which are peer reviewed submissions presented at the annual conference represent an assortment of humanities and social science disciplines including archeology cultural anthropology history ethnohistory linguistics literary studies Native studies social work film and countless others Both theoretical and descriptive approaches are welcomed and submissions often provide previously unpublished data from historical and contemporary sources or novel theoretical insights based on firsthand research The research is commonly interdisciplinary in scope and the papers are filled with contributions presenting fresh research from a broad array of researchers and writers These papers are essential reading for those interested in Algonquian world views cultures history and languages They build bridges among a large international group of people who write in different disciplines Scholars in linguistics anthropology history education and other fields are brought together in one vital community thanks to these publications *The Diachronic Typology of Non-Canonical Subjects* Ilja A. Serzant, Leonid Kulikov, 2013-11-15 This volume is an important contribution to the diachrony of non canonical subjects in a typological perspective The questions addressed concern the internal mechanisms and triggers for various changes that non canonical subjects undergo ranging from semantic motivations to purely structural explanations The discussion encompasses the whole life cycle of non canonical subjects from their emergence out of non subject arguments to their expansion demise or canonicization focusing primarily on syntactic changes and changes in case marking The volume offers a number of different case studies comprising such languages as Italian Spanish Old Norse and Russian as well as languages less studied in this context such as Latin Classical Armenian Baltic languages and some East Caucasian languages Typological generalizations in the form of recurrent developmental paths are offered on the basis of data presented in this volume and in the literature **Topics in French Syntax** Geraldine Legendre, 2016-11-10 The main goal of this study first published in 1994 is to present a substantial part of the grammar of French This goal is achieved by bringing together two aspects of syntactic investigation First the study focuses on a vast range of French clausal phenomena including Object Raising constructions Causative constructions of various types Impersonal constructions amongst many others Second the investigation is conducted within the framework of Relational Grammar This title will be of interest to students of language and linguistics **Papers of the Forty-Fourth Algonquian Conference** Monica Macaulay, Margaret Noodin, J. Randolph Valentine, 2016-05-01 *The Typology of Semantic Alignment* Mark Donohue, Søren

Wichmann, 2008-01-24 Semantic alignment refers to a type of language that has two means of morphosyntactically encoding the arguments of intransitive predicates typically treating these as an agent or as a patient of a transitive predicate or else by a means of a treatment that varies according to lexical aspect This collection of new typological and case studies is the first book length investigation of semantically aligned languages for three decades Leading international typologists explore the differences and commonalities of languages with semantic alignment systems and compare the structure of these languages to languages without them They look at how such systems arise or disappear and provide areal overviews of Eurasia the Americas and the south west Pacific the areas where semantically aligned languages are concentrated This book will interest typological and historical linguists at graduate level and above The Generative Lexicon James

Pustejovsky, 1998-01-23 The first formally elaborated theory of a generative approach to word meaning The Generative Lexicon lays the foundation for an implemented computational treatment of word meaning that connects explicitly to a compositional semantics The Generative Lexicon presents a novel and exciting theory of lexical semantics that addresses the problem of the multiplicity of word meaning that is how we are able to give an infinite number of senses to words with finite means The first formally elaborated theory of a generative approach to word meaning it lays the foundation for an implemented computational treatment of word meaning that connects explicitly to a compositional semantics In contrast to the static view of word meaning where each word is characterized by a predetermined number of word senses that imposes a tremendous bottleneck on the performance capability of any natural language processing system Pustejovsky proposes that the lexicon becomes an active and central component in the linguistic description The essence of his theory is that the lexicon functions generatively first by providing a rich and expressive vocabulary for characterizing lexical information then by developing a framework for manipulating fine grained distinctions in word descriptions and finally by formalizing a set of mechanisms for specialized composition of aspects of such descriptions of words as they occur in context extended and novel senses are generated The subjects covered include semantics of nominals figure ground nominals relational nominals and other event nominals the semantics of causation in particular how causation is lexicalized in language including causative unaccusatives aspectual predicates experiencer predicates and modal causatives how semantic types constrain syntactic expression such as the behavior of type shifting and type coercion operations a formal treatment of event semantics with subevents and a general treatment of the problem of polysemy Language Speech and Communication series **Argument**

Realisation in Complex Predicates and Complex Events Brian Nolan, Elke Diedrichsen, 2017-01-26 This book offers a comprehensive investigative study of argument realisation in complex predicates and complex events at the syntax semantic interface across a wide variety of the world's languages ranging over languages such as German Irish Sicilian and Italian Lithuanian Estonian and other Finno Ugric languages Pitjantjatjara Yankunytjatjara and Ngaanyatjarra from Australia's Western Desert region Japanese Tepehua Totonacan Mexico Cheyenne Mexican Spanish Boharic Coptic and Persian This

volume examines the syntactic variation of complex events complex predicates and multi verb constructions within a single clause where the clause is view as representing a single event studying their semantics and syntax within functional cognitive and constructional frameworks to arrive at a better understanding of their cross linguistic behaviour and how they resonate in syntax These constructions manifest considerable variability in cross linguistic comparisons of complex predicate formation In European languages for example typically one of the verbs in a verb verb construction highlights a phase of an underspecified event while the matrix verb specifies the actual event In contrast serial verbs require each verb to provide a sub event dimension within a complex event that is viewed holistically as unitary in syntax This book contributes to an understanding of complex events complex predicates and multi verb constructions across languages their syntactic constructional patterns and argument realisation

Constructions Adele E. Goldberg, 1995-03-15 Drawing on work in linguistics language acquisition and computer science Adele E Goldberg proposes that grammatical constructions play a central role in the relation between the form and meaning of simple sentences She demonstrates that the syntactic patterns associated with simple sentences are imbued with meaning that the constructions themselves carry meaning independently of the words in a sentence Goldberg provides a comprehensive account of the relation between verbs and constructions offering ways to relate verb and constructional meaning and to capture relations among constructions and generalizations over constructions Prototypes frame semantics and metaphor are shown to play crucial roles In addition Goldberg presents specific analyses of several constructions including the ditransitive and the resultative constructions revealing systematic semantic generalizations Through a comparison with other current approaches to argument structure phenomena this book narrows the gap between generative and cognitive theories of language

Rara & Rarissima Jan Wohlgemuth, Michael Cysouw, 2010 The series is a platform for contributions of all kinds to this rapidly developing field General problems are studied from the perspective of individual languages language families language groups or language samples Conclusions are the result of a deepened study of empirical data Special emphasis is given to little known languages whose analysis may shed new light on long standing problems in general linguistics

Lexical Functional Grammar Mary Dalrymple, 2001-08-08 Volume 34 of Syntax and Semantics is a thorough and accessible overview and introduction to Lexical Functional Grammar LFG a theory of the content and representation of different aspects of linguistic structure and the relations that hold between them The book motivates and describes the two syntactic structures of LFG surface phrasal organization is represented by a context free phrase structure tree and more abstract functional syntactic relations like subject and object are represented separately at functional structure The book also presents a theory of semantics and the syntax semantics interface in which the meaning of an utterance is obtained via deduction from semantic premises contributed by its parts Clear explication of the formal aspects of the theory is provided throughout and differences between LFG and other linguistic theories are explored The theory is illustrated by the analysis of a varied set of linguistic phenomena including modification control

anaphora coordination and long distance dependencies Besides its interest to linguists LFG also has practical applications in computational linguistics and computer science This book offers thorough overview of the state of the art in Lexical Functional Grammar It presents clear explanation of the formal tools of the theory It also offers introduction to the glue semantics a theory of the syntax semantics interface It also presents in depth syntactic and semantic analysis of a variety of linguistic constructions

Studies in Ditransitive Constructions Andrej Malchukov, Martin Haspelmath, Bernard Comrie, 2010-12-23 This rich volume deals comprehensively with cross linguistic variation in the morphosyntax of ditransitive constructions constructions formed with verbs like give that take Agent Theme and Recipient arguments For the first time a broadly cross linguistic perspective is adopted The present volume consisting of an overview article and twenty odd in depth studies of ditransitive constructions in individual languages from different continents arose from the conference on ditransitive constructions held at the Max Planck Institute for Evolutionary Anthropology Leipzig in 2007 It opens with the editors survey article providing an overview of cross linguistic variation in ditransitive constructions followed by the questionnaire on ditransitive constructions compiled by the editors in order to elicit various properties of these patterns The editors overview discusses formal properties of ditransitive constructions as well as behavioral or syntactic and lexical properties i e the extension of ditransitive constructions across different verb classes The volume includes 23 contributions describing properties of ditransitive constructions in languages from all over the world written by leading experts Care has been taken that the contributions to the volume will be representative of structural geographic and genealogical diversity in the domain of ditransitive constructions Thus the present volume provides a unique source of information on typological diversity of ditransitive constructions It is expected that it will be of central interest to all scholars and advanced students of linguistics especially to those working in the field of language typology and comparative syntax

The Structure of Complex Predicates in Urdu Miriam Butt, 1995-07 This book takes a detailed look at two differing complex predicates in the South Asian language Urdu The Urdu permissive in particular brings into focus the problem of the syntax semantics mismatch An examination of the syntactic properties of this complex predicate shows that it is formed by the combination of two semantic heads but that this combination is not mirrored in the syntax in terms of any kind of syntactic or lexical incorporation

The Handbook of Contemporary Semantic Theory Shalom Lappin, Chris Fox, 2015-09-22 The second edition of The Handbook of Contemporary Semantic Theory presents a comprehensive introduction to cutting edge research in contemporary theoretical and computational semantics Features completely new content from the first edition of The Handbook of Contemporary Semantic Theory Features contributions by leading semanticists who introduce core areas of contemporary semantic research while discussing current research Suitable for graduate students for courses in semantic theory and for advanced researchers as an introduction to current theoretical work

Edge-based Clausal Syntax Paul Martin Postal, 2010 An argument that there are three kinds of English grammatical objects each with different syntactic

properties In Edge Based Clausal Syntax Paul Postal rejects the notion that an English phrase of the form V DP invariably involves a grammatical relation properly characterized as a direct object He argues instead that at least three distinct relations occur in such a structure The different syntactic properties of these three kinds of objects are shown by how they behave in passives middles able forms tough movement wh movement Heavy NP Shift Ride Node Raising re prefixation and many other tests This proposal renders Postal s position sharply different from that of Chomsky who defined a direct object structurally as NP VP and with the traditional linguistics text s definition of the direct object as the DP sister of V According to Postal s framework sentence structures are complex graph structures built on nodes vertices and edges arcs The node that heads a particular edge represents a constituent that bears the grammatical relation named by the edge label to its tail node This approach allows two DPs that have very different grammatical properties to occupy what looks like identical structural positions The contrasting behaviors of direct objects which at first seem anomalous even grammatically chaotic emerge in Postal s account as nonanomalous as symptoms of hitherto ungrasped structural regularity

The Unaccusativity Puzzle

Artemis Alexiadou,Elena Anagnostopoulou,Martin Everaert,2004 The phenomenon of unaccusativity is a central focus for the study of the complex properties of verb classes This book combines contemporary approaches to the subject with several papers that have achieved a significant status even though formally unpublished
