Handbook of the Brief Psychotherapies Richard A. Wells,Vincent J. Giannetti,2013-11-22 The last two decades have seen unprecedented increases in health care costs and at the same time encouraging progress in psychotherapy research On the one hand accountability cost effectiveness and efficiency have now become commonplace terms for providers of mental health services whereas on the other hand an increasingly voluminous literature has emerged supporting the effectiveness of a number of types of psychotherapies There now exists the possibility for the design and delivery of mental health services that drawing upon this literature more closely approximate empirically established data concerning the appropriateness and

effectiveness of psychotherapy The Handbook of the Brief Psychotherapies is intended to capture one major thrust of this movement the development of a group of empirically grounded time limited therapies all sharing a common interest in the clinical utilization of a structured focus and an emphasis on time and action For many years professional self interest competing theoretical paradigms and the vagaries of practice wisdom and clinical myth have influenced the practice of psychotherapy A critical questioning of the resulting predominantly nondirective open ended and global therapies has led to a growing emphasis on action oriented problem focused time limited therapies Yet ironically this interest in the brief psychotherapies has not so much involved a radical departure from traditional therapeutic modalities as it has emphasized a new pragmatism about how time action and structure operate in life as well as in therapy
