**Internet-ontologies-Things** Sungyong Ahn, 2023-09-21 Internet ontologies Things explores how power mobilizes algorithmic and ontological objects for example smartwatches and smart buildings to uncover hidden problems within the physical domains of the IoT One popular approach of software studies in recent times is to think of algorithmic objects like the things in what is known as the Internet of Things IoT as ontological agents to the same extent as the humans who use them While post humanist philosophies such as speculative realism and object oriented ontology have provided a theoretical foundation for this methodological elevation of objects to autonomous and sentient beings the complicity between this philosophical discourse and the material transformation of our everyday lives which are embedded with these smart objects remains relatively underexplored Within this constantly changing infrastructure Internet ontologies Things Smart Objects Hidden Problems and their Symmetries reveals a new form of economic and political power whose algorithmic governance finds its legitimacy in our newly cultivated paranoia about unknown and perhaps unknowable computational problems In its examination of our smart world this book illuminates the mechanisms by which this power mobilizes various algorithmic and ontological objects from smart wearables to smart buildings to identify a greater number of hidden problems within the physical domains of the IoT from city sidewalks to the nerves and organs of our very own bodies
