Government Failure versus Market Failure Clifford Winston, 2007-04-01 When should government intervene in market activity and when is it best to let market forces take their natural course How does the existing empirical evidence about government performance guide our answers to these questions In this clear concise book Clifford Winston offers his

innovative analysis shaped by thirty years of evidence to assess the efficacy of government interventions Markets fail when it is possible to make one person better off without making someone else worse off thus indicating inefficiency Governments fail when an intervention is unwarranted because markets are performing well or when the intervention fails to correct a market problem efficiently Winston concludes from existing research that the cost of government failure may actually be considerably greater than the cost of market failure My search of the evidence is not limited to policy failures I will report success stories but few of them emerged from my search The prevalence of market failure is due to a lack of conviction in favor of markets the inflexibility of intervening government agencies and political forces that enable certain interest groups to benefit at the expense of society as a whole Winston suggests that government policy can be improved by making greater use of market oriented solutions that have already produced benefits in certain situations Market Failure, Government Failure, Leadership and Public Policy B. Faith Based Jason Hackworth, 2012-06-01 Faith Based explores how the Religious Right has supported neoliberalism in the United States bringing a particular focus to welfare an arena where conservative Protestant politics and neoliberal economic ideas come together most clearly Through case studies of gospel rescue missions Habitat for Humanity and religious charities in post Katrina New Orleans Jason Hackworth describes both the theory and practice of faith based welfare revealing fundamental tensions between the religious and economic wings of the conservative movement Hackworth begins by tracing the fusion of evangelical religious conservatism and promarket antigovernment activism which resulted in what he calls religious neoliberalism He argues that neoliberalism the ideological sanctification of private property the individual and antistatist politics has rarely been popular enough on its own to promote wide change Rather neoliberals gain the most traction when they align their efforts with other discourses and ideas The promotion of faith based alternatives to welfare is a classic case of coalition building on the Right Evangelicals get to provide social services in line with Biblical tenets while opponents of big government chip away at the public safety net Though religious neoliberalism is most closely

associated with George W Bush's Office of Faith Based and Neighborhood Partnerships the idea predates Bush and continues to hold sway in the Obama administration Despite its success however Hackworth contends that religious neoliberalism remains an uneasy alliance a fusion that has been tested and frayed by recent events

Who Benefits from the Nonprofit Sector? Charles T. Clotfelter, 1992-10-15 Over a million nonprofit organizations from day care centers and neighborhood churches to major research universities and metropolitan hospitals are currently relied upon to deliver an array of essential social services This is in keeping with a historical conviction that private voluntary action as opposed to government intervention should address as many of the nation's social needs as possible But just how much to rely on the nonprofit sector is the question at the center of a growing debate Critics challenge the assumption that nonprofit organizations have successfully directed much of their benefits toward the poor and disadvantaged an assumption that has to date justified favorable tax treatment for donations and nonprofit operations Who Benefits from the Nonprofit Sector examines all the major elements of the nonprofit sector health services educational and research institutions religious organizations social services arts and cultural organizations and foundations describing each institution and its function and then exploring how their benefits are distributed across various economic classes The book's findings indicate that while few institutions serve primarily the poor there is no evidence of a gross distribution of benefits upwards toward the more affluent The source of an institution's funding is also shown to be an important determinant in how its benefits are distributed They show for example that Nonprofit nursing homes and drug treatment centers have a lower concentration of Medicaid patients than their for profit public counterparts do Twenty seven percent of social service agencies serve primarily the poor and the large majority of these received most of their income from the federal government The effective educational subsidy i.e. cost of education less tuition per person at both public and private universities increases with income The analysis of this data makes for a book with profound implications for future social and tax policy
