*Hepatocellular Carcinoma* Nagy A. Habib, 2008-02-01 Advances in molecular characterization and novel gene isolation techniques have vigorously expanded our understanding of hepatocellular carcinoma HCC a form of liver cancer that affects one million people annually and generated many new therapeutic possibilities In *Hepatocellular Carcinoma Methods and Protocols* Nagy Habib and a team of basic and clinical researchers describe the wide variety of powerful new laboratory based molecular methods currently being used for investigating and treating this disease The book focuses on gene therapy approaches including the use of such vectors as lipids adenovirus and baculovirus and virus detection assessment using electron microscopy It also provides preclinical and clinical data on the killing of cancer cells using tumor suppressor genes antisense compounds to growth factors immunotherapy remove gene and virus directed enzyme prodrug therapy A perspective on future treatment of the failing liver is given along with a clinical protocol for p53 gene therapy *Hepatocellular Carcinoma Methods and Protocols* offers experimental and clinical investigators a rich source of both basic science and clinical information on today's optimal use of gene therapy to treat and manage patients suffering from hepatocellular carcinoma

**Molecular Analysis of Cancer** Jacqueline Boultonwood, Carrie Fidler, 2008-02-02 Over the past 20 years technological advances in molecular biology have proven invaluable to the understanding of the pathogenesis of human cancer The application of molecular technology to the study of cancer has not only led to advances in tumor diagnosis but has also provided markers for the assessment of prognosis and disease progression The aim of *Molecular Analysis of Cancer* is to provide a comprehensive collection of the most up to date techniques for the detection of molecular changes in human cancer Leading researchers in the field have contributed chapters detailing practical procedures for a wide range of state of the art techniques *Molecular Analysis of Cancer* includes chapters describing techniques for the identification of chromosomal abnormalities and comprising fluorescent in situ hybridization FISH spectral karyotyping SKY comparative genomic hybridization CGH and microsatellite analysis FISH has a prominent role in the molecular analysis of cancer and can be used for the detection of numerical and structural chromosomal abnormalities The recently described SKY in which all human metaphase chromosomes are visualized in specific colors allows for the definition of all chromosomal rearrangements and marker chromosomes in a tumor cell Protocols for the detection of chromosomal rearrangements by PCR and RT PCR are described as well as the technique of DNA fingerprinting a powerful tool for studying somatic genetic alterations in tumorigenesis

*Molecular Pathology of the Prions* Harry F. Baker, 2008-02-02 Internationally recognized investigators review the latest developments in and novel approaches to understanding the prion protein and prion diseases at the molecular level Utilizing a variety of cutting edge techniques these distinguished scientists seek to define the normal function of a prion protein to detect and measure the early immune response to prion disease and to discover possible therapeutic targets They also use transgenic mice and new electrophysiological investigations to elucidate the pathogenetic mechanisms

involved in prion diseases State of the art and richly insightful Molecular Pathology of the Prions captures for basic and clinical neuropathologists the latest developments and approaches to understanding the pathogenesis of prion diseases and by analogy suggests possible research techniques for the more common proteinopathies such as Alzheimer's and Parkinson's diseases

*Lung Cancer* Barbara Driscoll, 2003 Leading physician scientists and noted researchers review novel methods for determining the etiology of a variety of lung cancers and present readily reproducible techniques for examining the associated multitude of genetic abnormalities The methods make it possible to detect these alterations at the cellular DNA and protein levels to study the development of lung cancer in vitro and in vivo either in situ or in the form of metastases and to test targeted therapies with detailed model systems An animal models section gives explicit instructions for setting up and testing these systems which are rarely described in the literature

**Meningococcal Disease** Andrew J. Pollard, Martin C.J. Maiden, 2008-02-02 Meningococcal septicemia and meningitis continue to be important causes of devastating illness death and long term disability in both developed and resource poor countries of the world Few diseases have attracted as much public attention or are as feared by parents and family members as well as the medical staff who have to care for affected patients The unexpected and unpredictable occurrence of the disease in previously healthy children and young adults its rapid progression and the frequent occurrence of purpura fulminans with the resulting gangrene of limbs and digits and the requirement for mutilating surgery have all heightened both public and medical interest in the disease Over the past two decades there has been a rapid increase in knowledge of many aspects of meningococcal disease as a result of intensive efforts by workers in many different fields clinicians have studied the early presenting features and acute pathophysiology of the disorder clinical scientists have explored the immunopathological mechanisms responsible for disease and have highlighted the important roles played by the host inflammatory response and pro inflammatory cytokines in mediating damage to blood vessels and organs microbiologists have developed new diagnostic methods public health physicians and epidemiologists have improved surveillance techniques with the help of molecular tools provided by bacterial population biologists and basic scientists have used the powerful new tools in molecular and cell biology to elucidate virulence mechanisms

Molecular Signatures of Infectious Agents in Cancer M. Verma, 2002 The Cancer Biomarkers Research Group CBRG of the Division of Cancer Prevention DCP National Cancer Institute sponsored a workshop entitled Molecular Signatures of Infectious Agents in Bethesda Maryland September 7-8 2000 to identify molecular signatures of infectious agents and to utilize this information for risk assessment and development of prevention strategies against these infectious agents The specific objectives of the workshop were to review state of the science in detection technology that can identify extraneous genomic insertion in human cancers and to establish future research directions for using the molecular signatures of infectious agents for early detection risk assessment and prevention of cancer
