Heredity and Environment in 300

Adoptive Families Joseph Horn,2017-09-08 This book presents the results of a thirty five year research project involving 300 families each of whom adopted at least one child at birth from a Texas home for unwed mothers during the period of 1962 1970 The book weaves together information about the birth parents of the adopted children information about the adoptive parents and information about the children in these families Children adopted at birth have two sets of parents Birth parents provide their adopted away child with a genetic endowment but do not participate in shaping the child s environment Adoptive parents do not contribute genetically but are otherwise in charge of directing the child s development If adopted children grow up to resemble birth parents they have never seen the clear inference is that hereditary factors have had an influence Environmental factors are implicated whenever children resemble their adoptive parents but not the birth parents The Texas Adoption Project was designed to investigate the impact of genetic and environmental factors This unique and innovative longitudinal study is written for specialists and the educated public An introductory guide is provided for the non specialist reader explaining the form and statistical content of the tables Additional technical material for specialists is contained in appendices This important contribution to the literature on adoption will also be of interest to those interested in the relative weight of genetics and environment in human development

Heredity and environment in the development of men Edwin Grant Conklin,1922

Heredity, Environment, and Personality John C. Loehlin,Robert C.

Nichols,2014-11-06 This volume reports on a study of 850 pairs of twins who were tested to determine the influence of heredity and environment on individual differences in personality ability and interests It presents the background research design and procedures of the study a complete tabulation of the test results and the authors extensive analysis of their

findings Based on one of the largest studies of twin behavior conducted in the twentieth century the book challenges a number of traditional beliefs about genetic and environmental contributions to personality development The subjects were chosen from participants in the National Merit Scholarship Qualifying Test of 1962 and were mailed a battery of personality and interest questionnaires In addition parents of the twins were sent questionnaires asking about the twins early experiences A similar sample of nontwin students who had taken the merit exam provided a comparison group The questions investigated included how twins are similar to or different from nontwins how identical twins are similar to or different from fraternal twins how the personalities and interests of twins reflect genetic factors how the personalities and interests of twins reflect early environmental factors and what implications these questions have for the general issue of how heredity and environment influence the development of psychological characteristics In attempting to answer these questions the authors shed light on the importance of both genes and environment and form the basis for different approaches in behavior genetic research

Heredity and Environment in the Development of Men Edwin Grant Conklin, 1916 *Educational Psychology* D. N. Tutoo, 1998 [Heredity and Environment in the Development of Men](#) Edwin Grant Conklin, 2015-06-24

Excerpt from *Heredity and Environment in the Development of Men* The origin of species was probably the greatest biological problem of the past century the origin of individuals is the greatest biological subject of the present one The many inconclusive attempts to determine just how species arose led naturally to a renewed study of the processes by which individuals came into existence for it seems probable that the principles and causes of the development of individuals will be found to apply also to the evolution of races As the doctrine of evolution wrought great change in prevalent beliefs regarding the origin and past history of man so present studies of development are changing opinions as to the personality of man and the possibilities of improving the race The doctrine of evolution was largely of theoretical significance the phenomena of development are of the greatest practical importance indeed there is probably no other subject of such vast importance to mankind as the knowledge of and the control over heredity and development Within recent years the experimental study of heredity and development has led to a new epoch in our knowledge of these subjects and it does not seem unreasonable to suppose that in time it will produce a better breed of men The lectures which comprise this volume were given at Northwestern University in February 1914 on the Norman W Harris Foundation and were afterward repeated at Princeton University I gladly take this opportunity of expressing to the faculties students and friends of both institutions my deep appreciation of their interest and courtesy In attempting to present to a general audience the results of recent studies on heredity and development with special reference to their application to man the author has had to choose between simplicity and sufficiency of statement between apparent dogmatism and scientific caution between a popular and a scientific presentation About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art

Anastasi,1973 *Intellectual Development* Robert J. Sternberg,Cynthia A. Berg,1992-03-27 Books on intellectual development typically separate development into distinct developmental periods the formation of intelligence and basic cognitive skills that occurs until adolescence and the maintenance decline or improvement of these intellectual skills across the adult life span Robert Sternberg and Cynthia Berg have integrated research on these two development periods by

bringing together authors that provide a comprehensive overview to the major approaches to intellectual development The authors draw on six different approaches to intellectual development through childhood or adulthood psychometric Piagetian new Piagetian information processing learning and the contextual perspectives Common themes arise within and across particular perspectives which suggests that a more unified view of intellectual development may emerge as boundary lines between perspectives and developmental periods diminish
