Bioconversion of Waste Materials to Industrial Products A.M. Martin, 2012-12-06 By covering both the general principles of bioconversion and the specific characteristics of the main groups of waste materials amenable to bioconversion methods this new book provides the chemical biochemical agrochemical and process engineer with clear guidance on the use of these methods in devising a solution to the problem of industrial waste products

Separations Using Aqueous Phase Systems D. Fisher, 2012-12-06 The use of aqueous two phase systems for the partitioning of macromolecules organelles and cells was originally developed by Per Ake Albertsson in Sweden in the mid fifties 1 3 These systems were initially applied to separations of plant organelles and viruses but their use has now extended into most areas of cell biology and biochemistry 4 5 Since 1979 biennial International Conferences on Partitioning in Aqueous Two Phase Systems have been held in Los Angeles 1979 Sheffield 1981 Vancouver 1983 and Lund 1985 The 5th conference was held in Oxford from 23 28 August 1987 and was entitled Advances in Separations Using Aqueous Phase Systems in Cell Biology and Biotechnology It is the formal presentations from this meeting which comprise this volume In contrast to earlier books on phase partitioning 4 5 this volume contains for the first time worldwide contributions from over sixty partitioners from a variety of scientific disciplines thereby providing a detailed overview of the widespread application and potential of bioseparations using phase partitioning Disciplines include Biophysics Biochemistry Cell Biology Microbiology Biotechnology and Process Engineering in both academic and commercial establishments These biennial conferences allow advances in

these diverse partitioning fields to be reviewed and compared they also provide an opportunity for those considering using phase partitioning to obtain information advice and contacts Attendance has grown steadily over the years and 140 scientists came to Oxford The conference consisted of ten symposia on areas of application of partitioning which have been organised as specific chapters in this volume

Biotechnology for Fuels and Chemicals Brian H. Davison, Mark Finkelstein, Charles E. Wyman, 2012-12-06 BRIAN H DAVISON Oak Ridge National Laboratory MARK FINKELSTEIN National Renewable Energy Laboratory CHARLES E WYMAN Oak Ridge National Laboratory The Eighteenth Symposium on Biotechnology for Fuels and Chemicals continues to provide a forum for the presentation of research results and the exchange of ideas on advances in biotechnology for the production of fuels and chemicals Although the emphasis is on utilization of renewable resources the scope of the Symposium is broader than this and includes bioconversion of fossil fuels and syngas and the new area of conversions in nonaqueous environments these areas were discussed in Session 5 and in a Special Topic Discussion Group at the Symposium In addition recent developments in bioremediation were well represented in Session 6 and in the poster session The Symposium involved both the development of new biological agents such as enzymes or microbes to carry out targeted conversions as well as bioprocess development The first area covered improvements in enzymes as well as fundamental insights into substrate enzyme interactions and photosynthesis The latter area focused on converting one material into another using biological agents through combinations of chemical engineering biological sciences and fermentation technology This area also refers to an overall processing involving at least one biologically catalyzed step in combination with other physical and or chemical processing operations Agricultural crops such as corn and corn fiber as well as woody biomass and lignocellulosic wastes are emphasized for process feedstocks and their pretreatment investigated

Cabral, Manuel Mota, Johannes Tramper, 2001-09-20 Bioreaction engineering is fundamental to the optimization of biotechnological processes and the production of biochemicals by enzymes microbial plant and animal cells and higher organisms A reference text for postgraduate students and researchers in biochemical engineering and bioreactor design *Multiphase Bioreactor Design* describes the

Partitioning In Aqueous Two - Phase System Harry Walter, 2012-12-02 Partitioning in Aqueous Two Phase Systems Theory Methods Uses and Applications to Biotechnology is a collection of papers that discusses the applications of aqueous two phase systems to problems of separation and extraction of macromolecules organelles and cells Papers focus on the theoretical basis and the practical details of the procedures used Some of the papers describe in one or a few steps how two components can be separated by the investigator manipulating their partitions so that one component is in one phase and the other component is in the other phase or at the interface Investigators can also avail of developed batch extractions for plant organelles cell membranes nucleic acids and proteins The book cites as an example the partitioning of right side out and inside out vesicles obtained from fragments of thylakoid membranes to the top and bottom phases respectively of a Dx PEG system Other papers describe

the use of the countercurrent distribution when single extraction steps are not sufficient to produce a separation in materials that do not differ greatly in their partitioning behavior The collection can prove valuable for bio chemists cellular biologists micro biologists and developmental biologists Aqueous Two-Phase Systems Rajni Hatti-Kaul,2008-02-05 A mixture of two polymers or one polymer and a salt in an aqueous medium separates into two phases this phenomenon is useful in biotechnology for product separations Separation of biological molecules and particles in these aqueous two phase systems ATPS was initiated over 40 years ago by P Albertsson and later proved to be of immense utility in biochemical and cell biological research A boost in the application of ATPS was seen when problems of separations in biotechnology processes were encountered Its simplicity biocompatibility and amenability to easy scaleup operations make the use of ATPS very attractive for large scale bioseparations Despite the advantages ATPS enjoys over other separation techniques the application of two phase systems has for a long time been confined to selected labora ries Recent years have however shown a trend in which increasing numbers of researchers employ two phase partitioning techniques in both basic and applied research **Cell Separation** Ashok Kumar,Igor Yu Galaev,Bo Mattiasson,2007-10-09 With contributions by numerous experts
