Five Hydroxytryptamine Mechanisms In Primary Headaches Volume :

From Basic Pain Mechanisms to Headache Jes Olesen, Troels Staehelin Jensen, 2006 Though the topics of pain and headache are obviously linked these two research fields have in recent years developed at their own pace often with scant attention paid to the other By forging closer links between these fields it should be possible to develop a deeper understanding of both the pain mechanisms associated with headache and a deeper understanding of pain itself This book brings together researchers and clinicians from the forefront of these two disciplines to explore how the basic pain mechanisms relate to migraine and other forms of headache With cutting edge research from the frontiers of headache and pain research the book will be essential for clinicians treating headache sufferers providing answers to many of the commonly asked questions about the mechanisms of their headache It will also be of interest to those pain researchers dealing with mechanisms related to headache and migraine

Innovative drug development for headache disorders Jes Olesen, Nabih Ramadan, 2008-08-21 Migraine treatment improved considerably with the advent of the triptans in the 1990s While the drugs used previously for headache treatment had efficacy some compounds had bothersome side effects and their overuse could lead to severe complications In the early days of the triptans it was widely presumed that migraine was no longer a treatment problem However it has gradually been recognized that a significant proportion of patients are not responsive to triptans or do not tolerate them It is now clear that even with effective treatment patients with frequent migraine attacks are not treated well exclusively with acute medications This is partly because patients are still bothered by the attacks and partly because frequent intake of acute medication may result in medication overuse headache These problems have led to a renewed interest in preventive migraine drugs Part of the Frontiers in Headache Research series this book summarizes the several promising new avenues for the development of future drugs for the treatment of migraine including cortical spreading depression inhibition nitric oxide synthase inhibition and calcitonin gene related peptide CGRP receptor antagonism as well as other potential targets The book presents frontline knowledge of these evolving modalities as far as it is available in the public domain It is hoped that readers and their patients will find it exciting to learn about all the novel possibilities and also that the impressive research advances in migraine will lead to increased funding not only of migraine but also of other types of headache

Headache Clinics Rigmor Jensen, Hans-Christoph Diener, Jes Olesen, 2007 Headache is a huge public health problem and migraine alone cost 27 billion Euros per year in Europe It is therefore important how the health care service for headache patients is organised throughout the world Patients seen at headache clinics are more severely affected than those seen in general practice and headache clinics need to be familiar with a long list of relatively rare headache disorders Part of the Frontiers in Headache Research

series this volume is the first book to focus specifically on headache clinics their classification and organization their methods of diagnosis and their approaches to multi disciplinary management The clinical features of patients seen in headache clinics are thoroughly discussed The value of a number of diagnostic laboratory techniques including when and how to use neuro imaging is discussed Also a number of more specialised methods employed only in referral headache centres are covered such as nitro glycerine challenge indomethacin test and oxygen breathing The treatment options for severely affected patients are discussed including the possibilities of combining two or more prophylactic medications the use of epidural blood patch and the different methods for discontinuation of medication overuse This volume will be an invaluable resource for neurologists physicians in headache pain clinics and interested general practitioners
