Pawel Zajac,2015-09-14 This book focuses on guidelines for reducing the energy consumption in warehousing processes It presents a model of formal assessment for energy consumption in the context of storage system logistics as well as a computational model consisting of three sub models energy consumption models for forklifts and stacker cranes respectively and an energy intensity model for roller conveyors The concept model is based on the assumption that the unit load is received at a zero energy warehouse Subsequent handling transport and storage processes in which the unit load is moved vertically and horizontally through the system equate to changes in energy intensity within the logistics warehouse management system Energy recovery based on the handling equipment used can be collected in batteries The evaluation method takes into account the intensity of the energy supplied to the logistics system and reduces the storage of the recovered energy this figure represents the energy needed to pass through the logistics unit load storage system and can be expressed in an energy intensity map    Engineering Fluid Dynamics Bjørn H. *Energy Resources and Systems* Tushar K. Ghosh, Mark A.

Prelas, 2011-06-27 This second volume of Energy Resources and Systems is focused on renewable energy resources Renewable energy mainly comes from wind solar hydropower geothermal ocean bioenergy ethanol and hydrogen Each of these energy resources is important and growing For example high head hydroelectric energy is a well established energy resource and already contributes about 20% of the world s electricity Some countries have significant high head resources and produce the bulk of their electrical power by this method However the bulk of the world s high head hydroelectric resources have not been exploited particularly by the underdeveloped countries Low head hydroelectric is unexploited and has the potential to be a growth area Wind energy is the fastest growing of the renewable energy resources for the electricity generation Solar energy is a popular renewable energy resource Geothermal energy is viable near volcanic areas Bioenergy and ethanol have grown in recent years primarily due to changes in public policy meant to encourage its usage Energy policies stimulated the growth of ethanol for example with the unintended side effect of rise in food prices Hydrogen has been pushed as a transportation fuel The authors want to provide a comprehensive series of texts on the interlinking of the

nature of energy resources the systems that utilize them the environmental effects the socioeconomic impact the political aspects and governing policies Volume 1 on Fundamentals and Non Renewable Resources was published in 2009 It blends fundamental concepts with an understanding of the non renewable resources that dominate today s society The authors are now working on Volume 3 on nuclear advanced energy resources and nuclear batteries consists of fusion space power systems nuclear energy conversion nuclear batteries and advanced power fuel cells and energy storage Volume 4 will cover environmental effects remediation and policy Solutions to providing long term stable and economical energy is a complex problem which links social economical technical and environmental issues It is the goal of the four volume Energy Resources and Systems series to tell the whole story and provide the background required by students of energy to understand the complex nature of the problem and the importance of linking social economical technical and environmental issues
