Fluorine-containing Amino Acids Valery P. Kukhar, Vadim A. Soloshonok, 1995-04-06 In recent years organo fluorine chemistry has made a marked impact on the design and synthesis of a large variety of biologically active molecules such as steroids carbohydrates amines amino acids peptides and other natural products Naturally occurring amino acids play a pivotal role in living systems and therefore synthetic fluorine containing amino acids have been of significant interest to researchers working towards the understanding and modification of physiological processes Fluorine containing Amino Acids is the first volume devoted to the synthesis and properties of fluorine containing amino acids pays special attention to the preparation of enantiomerically pure acids which are essential to the modern pharmaceutical industry deals with a rapidly expanding field of research has been written by experienced researchers who are responsible for many developments in the field highlights the interdisciplinary nature of this topic Fluorine containing Amino Acids is the only dedicated reference in this subject and will be essential for researchers in synthetic organic peptide natural product and medicinal chemistry and biochemistry

Fluorine in Medicinal Chemistry and Chemical Biology Iwao Ojima, 2009-03-23 The extraordinary potential of fluorine containing molecules in medicinal chemistry and chemical biology has been recognized by researchers outside of the traditional fluorine chemistry field and thus a new wave of fluorine chemistry is rapidly expanding its biomedical frontiers With several of the best selling drugs in the world crucially containing fluorine atoms the incorporation of fluorine to drug leads has become an essential practice in biomedical research especially for drug design and discovery as well as development Focusing on the unique and significant roles that fluorine plays in medicinal chemistry and chemical biology this book reviews recent advances and future prospects in this rapidly developing field Topics covered include Discovery and development of fluorine containing drugs and drug candidates New and efficient synthetic methods for medicinal chemistry and the optimisation of fluorine containing drug candidates Structural and chemical biology of fluorinated amino acids and peptides Fluorine labels as probes in metabolic study protein engineering and clinical diagnosis Applications of ^{19}F NMR spectroscopy in biomedical research An appendix presents an invaluable index of all fluorine containing drugs that have been approved by the US Food and Drug Administration including information on structure and pharmaceutical action Fluorine in Medicinal Chemistry and Chemical Biology will serve as an excellent reference source for graduate students as well as academic and industrial researchers who want to take advantage of fluorine in biomedical research

Fluorine In Pharmaceutical And Medicinal Chemistry: From Biophysical Aspects To Clinical Applications Veronique Gouverneur, Klaus Muller, 2012-04-26 Fluorine chemistry is an expanding area of research that is attracting international interest due to the impact of fluorine in drug discovery and in clinical and molecular imaging e g PET MRI Many researchers and academics are entering this area of research while scientists in industrial and clinical environments are also indirectly exposed to fluorine chemistry through the use of fluorinated compounds for imaging This

book provides an overview of the impact that fluorine has made in the life sciences In the first section the emphasis is on how fluorine substitution of amino acids peptides nucleobases and carbohydrates can provide invaluable information at a molecular level The following chapters provide answers to the key questions posed on the importance of fluorine in drug discovery and clinical applications For examples the reader will discover how fluorine has found its place as a key element improving drug efficacy with reference to some of the best selling drugs on the market Finally a thorough review on the design synthesis and use of ^{18}F radiotracers for positron emission tomography is provided and this is complemented with a discussion on how ^{19}F NMR has advanced molecular and clinical imaging a

Pharmacology of Fluorides Ernst W. Alther, 2013-11-21 One might well ask why another volume dealing with biological aspects of compounds of fluorine should be offered to the scientific community already burdened with a literature too massive to be comfortably ingested Prior to World War II this question simply did not arise there was not sufficient interest or literature in the field to warrant anything beyond the classical monograph published by KAJ RoHOLM in 1937 RoHOLM's work was directed chiefly toward a better understanding of the effects of fluorides on the general health of workers in the cryolite industry However with the demonstration that water

borne fluoride was a causative agent of both mottled enamel and increased resistance to dental caries the ground work was laid in the 1930 s and early 1940 s for a greatly increased interest in the biological effects of fluorides in human beings During this time and earlier for that matter work also had been going steadily ahead in the less spectacular area of effects produced in poultry and livestock when fluorine containing rock phosphate was incorporated in the ration and when pasture land was contaminated with fluorides released during the large scale conversion of rock phosphate to fertilizer and phosphoric acid These latter aspects of the problem had led to the development of a respectable literature in plant physiology dealing with the effects of fluoride on vegetation

Preservation of nature and the environment has become one of the most important issues of the end of the twentieth century It has become evident that the methods used for industrial and agricultural production in many countries produce pollutants that cannot undergo natural neutralization by entering the atmosphere soil or water Ecosystems that have been developing for centuries are undergoing degradation and what is even more regrettable is that there is an actual threat of profound disorder in the biosphere which could lead to heavy and irreversible changes Fluorine derivatives are the most aggressive among toxic compounds polluting the atmosphere Moreover the percentage of fluorides in industrial emissions is constantly increasing with the bulk of fluorides being emitted by aluminium smelters Fluorine is poorly detoxified by both plants and animals and the accumulation of even relatively low concentrations over a long period causes a cumulative toxic effect Among woody plants conifers are less resistant to fluorine Fluorine derivatives as phytopollutants have been studied less than sulphur compounds nitrogen oxides chlorine and hydrogen chloride It was not until the late 1960s when there was a rapid decline of coniferous forests that researchers directed their attention towards phyto toxic properties of fluorides
