

Headwater streams swiftly flow down steep mountain slopes and cut deep, v-shaped valleys. Waterfalls and rapids occur in this zone.

Lower-elevation streams merge to flow down gentle slopes. Valleys broaden as coalescing rivers start to meander.

At the lowest elevations, a river meanders across a broad, nearly flat valley and floodplain. At a river's mouth, it may divide into separate channels as it flows across a delta extending out to sea. The coastal plain and delta are made of river sediments.

Fluvial Processes And Environmental Change:

Fluvial Processes and Environmental Change A.G. BROWN,1999 *Fluvial Processes and Environmental Change* A. G. Brown,Antony Brown,Timothy Quine,1999-05-04 This volume consists of twenty chapters addressing different aspects of the theme of fluvial processes and environmental change The overall coverage is broad scientifically from modelling to alluvial dating geographically from arid zone flash flooding to glacial meltwaters and in time from contemporary process studies to the Quaternary The introductory chapter sets the context which is an attempt to show how studies of fluvial processes can help us in understanding and therefore predicting the impact of environmental change on our rivers riverine resources and landscapes Environmental change includes both climatic factors however caused and human impacts on river basins The differentiation of these two factors is discussed in several chapters whilst others take a more holistic approach Both climatic and human factors have and will remain to act together and so their interactions need to be understood Fluvial Processes and Environmental Change is divided into five sections commencing with the slope catchment scale and proceeding to studies of channel response then floodplain processes and floodplain response and finally two studies from glacierised basins The volume originated as a two day session of the British Geomorphological Research Group and contributors from Europe the USA and Australia were included in order to provide a wide perspective on the topic This book will be a valuable reference for postgraduates and researchers in fluvial geomorphology hydrology Quaternary science geology and environmental science

for any student of physical geography environmental geography or environmental sciences *Environmental Change and Tropical Geomorphology* Ian Douglas, Tom Spencer, 2020-05-11 The tropics provide the key to understanding much biological and Earth science This is particularly true for the study of landforms which in higher latitudes suffer great seasonal contrasts in process intensity and type and which often in the past underwent the dramatic changes of glaciation and periglaciation Yet studies in the tropics have shown that the legacy of past climate changes is much more dramatic than was formerly believed This book first published in 1985 brings together the variety of evidence about such environmental changes over a variety of timescales and sets it against the current knowledge of the nature of geomorphic processes in the tropics *Alluvial Archaeology in Europe* Andrew J. Howard, M.G. Macklin, D.G. Passmore, 2003-01-01 This book documents and assesses over ten years of research in the field bringing together expertise and knowledge from the disciplines of archaeology and geomorphology and highlighting important recent advances discoveries and new directions Reflecting the wide scope of current research in this area the book contains over twenty papers focusing on various aspects of alluvial archaeology from the methodology of dating prospecting excavating etc to previously under analysed geographical areas such as intertidal wetlands *Encyclopedia of Geomorphology* Andrew Goudie, 2013-04-15 Volume editor is the leading authority in the field Alphabetically organized in two volumes c 700 comprehensively signed cross referenced and indexed entries Detailed bibliographies and suggestions for further reading follow most entries Fully illustrated over 300 plates and line drawings Written by an editorial team of over 270 experts from over thirty countries **River Restoration** Stephen Darby, David Sear, 2008-02-28 River restoration projects are designed to recreate functional characteristics within a context of physical stability They tend to focus on the development and application of geomorphic principles for river restoration design Due to different models obtaining different results on the same problem incomplete or absent data and climatic social cultural changes the designers and managers of such projects frequently face high levels of uncertainty This book will provide a systematic overview of the issues involved in minimizing and coping with uncertainty in river restoration projects A series of thematic sections will be used to define the various sources of uncertainty in restoration projects and how these show at different points in the life cycle design construction and post construction phases of restoration projects The structure of the book will offer a rational theoretical analysis of the problem while providing practical guidance in managing the different sources of uncertainty A wide range of case studies will be included from Europe North America and Australasia **The Cryosphere and Global Environmental Change** Olav Slaymaker, Richard Kelly, 2009-03-12 This is the first textbook to consider all aspects of the cryosphere system in the context of global environmental change driven by human activity and climate Considers all six aspects of the cryosphere ice sheets glacier ice permafrost river and lake ice sea ice and snow in the context of global environmental change driven by human activity and climate Describes a new concept of cryosphere transience and landscape transition which links climate hydrology ecology and geomorphology Looks at the evidence process

and patterns of cryosphere change on local and global scales Provides a wealth of data to inform the current global environmental change debate Additional resources for this book can be found at <http://bcs.wiley.com/he/bcsBooks/action/index/bcsId/5064/itemId/140512976X>

Cultural Landscapes and Environmental Change Lesley Head, 2017-09-25 Cultural landscapes are usually understood within physical geography as those transformed by human action As human influence on the earth increases advances in palaeocological reconstruction have also allowed for new interpretations of the evidence for the earliest human impacts on the environment It is essential that such evidence is examined in the context of modern trends in social sciences and humanities This stimulating new book argues that convergence of the two approaches can provide a more holistic understanding of long term physical and human processes Split into two major sections this book attempts to bridge the gap between the sciences and humanities The first section provides an analysis of the methodological tools employed in examining processes of environmental change Empirical research in the fields of palaeocology and Quaternary studies is combined with the latest theoretical views of nature and landscape occurring in cultural geography archaeology and anthropology The author examines the way in which environmental management decisions are made The book then moves on to discuss the relevance of this perspective to contemporary issues through a wide variety of international case studies including World Heritage protection landscape preservation indigenous people and cultural tourism

Sediment Response to Large-scale Environmental Change Richard P. R. Pannell, 1999 Knowledge about sediment yields is important in developing management strategies for fluvial systems The effect of sediment must be considered in the design of river structures and in determining water quality for biotic systems Changes in sediment transport regimes are difficult to understand or predict due to the complexity of factors that influence sediment flux in fluvial systems Relationships about sediment source sinks and transport have long been studied and many of these relationships have been quantitatively and qualitatively defined However due to the scarcity of long term sediment records it is often difficult to test these relationships This study examines one of these long term suspended sediment records for the Mississippi River at East Dubuque Illinois from 1943 to 1996 Daily suspended sediment concentrations from the United States Army Corps of Engineers station at East Dubuque were analyzed for the spring and summer months March August Sediment concentrations were analyzed in terms of average concentration during different hydrologic events at the large basin scale These events included the spring snowmelt runoff low and high magnitude and different intensity storm runoff low moderate and high Additionally peak sediment concentrations during storm runoff were also analyzed The general trend for all of these analyses suggests a significant decrease in sediment concentrations from the 1940s to the 1990s The strongest trends are found in high magnitude snowmelt runoff and in high and moderate magnitude storm runoff Peak concentrations in storm runoff have decreased from about 1000 ppm in the 1940s to about 200 ppm in the 1990s Average concentrations have likewise decreased

from about 200 ppm in the 1940s to 100 ppm in the 1990s Changes in land management practices are identified as being the primary environmental factor influencing sediment concentrations

The Environment and Aggregate-Related Archaeology Tony Brown, 2009-01-15 This volume provides a synthetic review of the background and archaeology that has emerged through archaeological interventions associated with the quarrying of sand gravel and rock for aggregates The book covers all periods from the Lower Palaeolithic to Medieval and is organized on a regional basis The review which also contains as yet unpublished data shows how the variety and preservation of archaeology can greatly expand our understanding of the relationships of humans to their changing environments

Late Quaternary Environmental Change Martin Bell, M.J.C. Walker, 2014-07-10 Late Quaternary Environmental Change addresses the interaction between human agency and other environmental factors in the landscapes particularly of the temperate zone Taking an ecological approach the authors cover the last 20 000 years during which the climate has shifted from arctic severity to the conditions of the present interglacial environment

Fundamentals of the Physical Environment Peter Smithson, Ken Addison, Ken Atkinson, 2005-08-02 The third edition of this popular textbook has been extensively revised to incorporate current thinking and knowledge in the area of physical geography and the environment whilst retaining its basic structure

Geomorphology and Global Environmental Change Olav Slaymaker, Tom Spencer, Christine Embleton-Hamann, 2009-07-02 A statement from the world's leading geomorphologists on the state of and potential changes to the environment

Geomorphology of Desert Environments Anthony J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth's land surface experiences a desert climate and this area supports approximately 15% of the planet's population This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically It begins with an overview of global deserts proceeds through treatments of weathering hillslopes rivers piedmonts lake basins and aeolian surfaces and concludes with a discussion of the role of climatic change Written by a team of international authors all of whom are active in the field the chapters cover the spectrum of desert geomorphology
