The fundamental idea of manufacturing or production is to create or produce something that has a useful form. There are four basic production processes for producing desired shape of a product. These are casting, machining, joining, welding, mechanical fasteners etc. and forming processes. Casting process exploits the fluidity of a metal in liquid state as it takes shape and solidifies in a mould. Machining processes provide desired shape with good accuracy and precision but tend to waste material in the generation of removed portions. Joining processes permit complex shapes to be constructed from simpler components and have a wide domain of applications. Forming processes exploit a remarkable property of metals.

which is their ability to flow plastically in the solid state without deterioration of their properties With the application of suitable pressures the material is moved to obtain the desired shape with almost no wastage This book on Manufacturing Process will give you a detailed understanding of manufacturing processes such as casting joining and forming Flux Cored Arc Welding Video Series Delmar,2000-11-01 Ideal for true beginners this set of 4 videos introduces essential flux cored arc welding principles and techniques Individual tapes address everything from set up to beginning through intermediate welds Step by step instruction in each video is aimed at assisting viewers in developing basic hand skills Live action close ups and step by step animations are featured The importance of safety as well as the proper use of safety equipment is also stressed Available on VHS cassettes or CD ROM this series also features a set of corresponding activity sheets to help viewers apply what they have seen on each video to the welding shop Tapes and CDs may be purchased separately or as a complete set The entire series may be used independently or as a supplement to any welding textbook
