Entrepreneurship and Development Index 2013 Erkki Autio, 2013-01-01. Acclaim for the 2011 edition: The Global Entrepreneurship and Development Index focuses on high-growth companies. It tries to measure the ambition of entrepreneurs as well as the prevalence of start-ups. It presents its results in ways that are designed to capture the attention of policymakers. It produces a ranking of 71 countries for all their faults; nothing makes a politician jump like a league table. It also identifies bottlenecks that prevent countries from doing better. The index concludes that development and enterprise are correlated. The Economist: The Global Entrepreneurship and Development Index both captures the context, features of entrepreneurship, and fills a gap in the measurement of development. Building on recent advances in entrepreneurship and economic development, the authors have created an index that offers a measure of the quality of the business formation process in 118 of the most important countries in the world. The authors expertly capture the contextual feature of entrepreneurship by focusing on entrepreneurial attitudes, entrepreneurial abilities, and entrepreneurial aspirations. The data and their contribution to the business formation process are supported by three decades of research into entrepreneurship across a host of countries. The unique index construction of individual and institutional measures integrates 31 variables from

various data sources into 14 pillars three sub indexes and a super index The relationship between entrepreneurship and economic development appears to be more or less mildly S shaped The findings suggest moving away from simple measures of entrepreneurship across countries illustrating a U shaped or L shaped relationship to more complex measures which are positively related to development The model has important implications for development policy This unique book will be invaluable for researchers policymakers and entrepreneurs keen to expand their understanding of entrepreneurship and development

Life Values and Adolescent Mental Health Patricia Cohen, Jacob Cohen, 2013-05-13 Arising from the Cohens work on the epidemiology of childhood psychopathology this book explores the two aspects of motivational structure ideas and values that underlie the development of maladaptive functioning and symptoms The first aspect is a measure of what children admire in their peers this measure is seen as an operationalization of personal ideals The second is a measure of life goals seen as a representation of the contemporary structure of long term personal values Despite the considerable amount of attention given in the popular press and among social critics and politicians values have been relatively neglected as a topic of empirical research in this country To fill the void this work uses data from a large cohort of young people who have been studied longitudinally since early childhood to elucidate three aspects of life goals and values What are the demographic family peer school and intrapersonal influences that shape values and life goals of adolescents How do they change over the course of adolescence What impact do these values have on the lives of adolescents and young adults Decisions about what we find most admirable and which of the many apparently good things in life we will take on as our top priorities are consequential both for the contemporary and for the future emotional and behavioral well being of the individual Thus this book explores systematically the environmental origins of ideals and values using deprivation and attainment hypotheses to examine a variety of influences on the development of differences in values This book also examines the relationship between the measures of children s values and psychopathology examining both the Axis 1 diagnosis including disruptive behavior disorders depression and anxiety and the Axis 2 personality disorders Providing an extensive study of the life values of adolescents and the state of their mental health this monograph will be of interest to developmental psychologists specializing in adolescence child clinical psychologists and psychiatrists
