**On Tissue Engineering and Regenerative Medicine of Skin and Its Appendages** Marianna Bei,Basak E.

Uygun,2019-11-01 Skin is the largest organ of the body and is necessary for survival since it performs many functions such as providing a physical barrier to the external environment sensation retention of normal hydration and thermal regulation Significant skin loss is associated with high mortality and morbidity in the acute phase and with physically and cosmetically drastic scarring in the long term Although there are a number of tissue engineered products in the clinic that are used as skin substitutes to promote healing of traumatic burn and diabetic wounds yet they lack several important functions including those provided by the appendages such as the hair follicles sebaceous and sweat glands The understanding of cellular molecular and engineering aspects of the pathology repair and or regeneration of skin after wound induction is of paramount importance in order to develop the next generation of tissue engineered products with gene enhanced capacity In that context we brought together scientists from basic research translational and bioengineering fields whose work focus on cutting edge research associated with the acquisition of new therapeutic approaches towards skin regeneration Precision Dairy Farming 2016 Claudia Kamphuis,Wilma Steeneveld,2023-09-04 The supply of new innovative precision dairy farming technologies is steadily increasing It aims to help farmers to be more labour efficient and to support them in their daily management decisions At the same time since many technologies are developed from an engineering perspective adoption of these technologies is sometimes limited since knowledge on economic benefits and farmers needs is often incomplete This book covers the current status of precision dairy farming technologies and what farmers expect from them It also includes insights and future perspectives on managing analysing and combining sensor information Moreover new innovative ideas that may better fit farmers needs and expectation are introduced ranging from technologies or innovations that aim at improved animal health and welfare to those technologies that result in a more efficient use of feed and improved grazing management This book is unique because science and engineering are combined to develop precision dairy farming technologies that are to be applied in practice The book will serve as a stepping stone for new and innovative ideas within this rapidly growing area within dairy farming **Applications of Evolutionary Computation** Giovanni Squillero,Kevin Sim,2017-04-03 The two volumes LNCS 10199 and 10200 constitute the refereed conference proceedings of the 20th European Conference on the Applications of Evolutionary Computation EvoApplications 2017 held in Amsterdam The Netherlands in April 2017 collocated with the Evo 2016 events EuroGP EvoCOP and EvoMUSART The 46 revised full papers
