Flashpoints in Environmental Policymaking Sheldon Kamieniecki, George A. Gonzalez, Robert O. Vos, 1997-01-01 As a contribution to public policy and to help educate students about natural resource issues this book identifies the likely hot spots of environmental policy and presents alternative and often opposing points of view on the major controversies that are likely to be with us well into the next century Among the topics covered are comparative risk assessment market incentives in environmental regulation environmental justice public versus private management of public lands international trade and sustainable development and the relationship between national security and environmental protection

Hatch, 2012-02-01 The methods employed in the pursuit of environmental protection are often highly contested leading to alternative policy approaches This book details the frequently neglected topic of these alternative approaches to environmental policymaking through case studies drawn primarily from the United States Germany and Japan Among the policy instruments analyzed are eco audits voluntary agreements tradable permits green taxes environmental impact assessments and command and control regulations Also examined are international regulatory arrangements to encourage sustainable forestry management practices Various evaluative criteria are applied to each case study including environmental effectiveness economic and political efficiency administrative efficacy and technological innovation

Urban Areas and Global Climate Change William Holt, 2012-10-12 Examining urban environmental issues at the macro municipal level down to the micro community and individual level this volume features cities and metropolitan regions across the global north and south with case studies from the United States Canada Eastern and Western Europe to India Central America South America and

Africa **New Ways of Doing Business** Mark A. Abramson, Ann M. Jeffaber, 2003-08-04 In their introduction the editors of *New Ways of Doing Business* assert that in retrospect it will be apparent that today's government that of the early years of the 21st century was undergoing its most significant transformation since the decade of the 1930s when direct government delivered services grew significantly as part of the New Deal. This newest volume in the IBM Endowment for the Business of Government series is an invaluable guide to navigating the sometimes controversial changes taking place in the internal operations of government: the delivery of services to citizens and the delivery of environmental programs. Possibly the most monumental change taking place in our modern government is the lessening allegiance to the old model of in-house departmental performance of tasks. The new model asks how and by whom can the tasks of government best be performed. The answer sometimes lies with another inter-governmental department leading to an in-house atmosphere of healthy competition and entrepreneurship and sometimes with outside contractors. *New Ways of Doing Business* provides descriptions and guidelines for successfully navigating management under the new model. There are also dramatic new ways in which services to the public can now be delivered via the Internet via contracts with private organizations and via faith-based initiatives and business improvement districts. Experts provide valuable checklists and guidelines and case studies exploring the merits and disadvantages of these new service delivery routes. Finally, *New Ways of Doing Business* explores what the editors call one of the most highly experimental policy arenas in government: that of the delivery of environmental programs. The authors of these articles explain via case study analysis many of the innovative programs currently in existence and postulate that the traditional command and control stance of government to businesses will be superseded by a flexibility that will allow for increased eco-efficiency and attention to market-based regulatory tools.

Competition, Choice, and Incentives in Government Programs Albert Morales, John M. Kamensky, 2006 Since the 1980s the language used around market-based government has muddled its meaning and polarized its proponents and critics making the topic politicized and controversial. *Competition, Choice, and Incentives in Government Programs* hopes to reframe competing views of market-based government so it is seen not as an ideology but rather as a fact-based set of approaches for managing government services and programs more efficiently and effectively.

Food Policy Tim Lang, David Barling, Martin Caraher, 2009-03-19 For over half a century food policy has mapped a path for progress based upon a belief that the right mix of investment, scientific input and human skills could unleash a surge in productive capacity which would resolve humanity's food-related health and welfare problems. It assumed that more food would yield greater health and happiness by driving down prices, increasing availability and feeding more mouths. In the 21st century this policy mix is quietly becoming unstuck. In a world marred by obesity alongside malnutrition, climate change alongside fuel and energy crises, water stress alongside more mouths to feed and social inequalities alongside unprecedented accumulation of wealth, the old rubric of food policy needs re-evaluation. This book explores the enormity of what the new policy mix must address, taking the approach that food policy

must be inextricably linked with public health environmental damage and social inequalities to be effective Written by three authors with differing backgrounds one in political science another in environmental health and health promotion and the third in social psychology this book reflects the myriad of perspectives essential to a comprehensive view of modern food policy It attempts to make sense of what is meant by food policy explores whether the term has any currency in current policy discourse assesses whether current policies help or hinder what happens judges whether consensus can triumph in the face of competing bids for understanding looks at all levels of governance across the range of actors in the food system from companies and the state to civil society and science considers what direction food policies are taking not just in the UK but internationally assesses who and what gains or loses in the making of these food policies and identifies a modern framework for judging how good or limited processes of policy making are This book provides a major comprehensive review of current and past food policy thinking and proposing the need for what the authors call an ecological public health approach to food policy Nothing less will be fit for the 21st century Achieving Sustainable Development Hans T. Bressers, Walter A. Rosenbaum, 2003-12-30

Bressers Rosenbaum and their contributors analyze what until recently has been among the least examined issues implicit in the growing global discourse about sustainable development the creation of institutions and processes for effective governance of sustainability policies The creation and endurance of governance institutions capable of implementing sustainability policies is in fact fundamental for any viable conception of sustainable development The analyses focus not only on how societies can organize but on how they do organize to overcome such daunting obstacles in the Netherlands the Northwest United States Costa Rica Madagascar Senegal and the European Union The writers focus particularly upon the special problem embedded in the sustainability paradigm that of organizing governance across scales that is to say across and between geographic political ecological or other social levels in a sustainable regime In recent years the scale problem has emerged as a major and enlarging concern as international efforts proliferate to implement various sorts of sustainability policies The analyses focus not only on how societies can organize but on how they do organize to overcome such daunting obstacles The analyses place considerable emphasis upon the history and lessons to be learned from ongoing efforts to achieve such governance in several diverse international settings including the Netherlands the Northwest United States Costa Rica Madagascar Senegal and the European Union *International Policy Studies* Stuart S. Nagel, David Rosenblum, 2000

The basic elements of this book involve integrating five policy problems and four fields of knowledge The five policy problems are economic technology social political and legal The four developing regions are Africa Asia Eastern Europe and Latin America The four fields of knowledge are natural science social science humanities and law

Sustaining the Forests of the Pacific Coast Debra Salazar, Donald K. Alper, 2011-11-01 Forests define the Pacific Coast in many ways Culturally they are part of the traditions of the First Nations economically they have sustained an industry that has created settlements and wealth throughout the area In the last twenty years the forests have become the subject of increasing conflict as economic interests clash with changing social and political values The war in the woods has escalated hardening battle lines and polarizing forest politics In this thoughtful collection of essays edited by Debra J Salazar and Donald K Alper forest policy in the U S Pacific Northwest and British Columbia is examined in a binational context While US and Canadian forest policy and forest management approaches differ the two countries face similar challenges and conflicts Contributors discuss the evolution of forest exploitation the response of timber companies to U S federal environmental regulations sovereignty for First Nations communities and the reshaping of the political economy of forests by global forces on both sides of the border Groups usually ignored in the forest policy debate such as First Nations peoples workers in the emerging non forest economy and citizen activists are also given voice in this fascinating compilation The contributors to *Sustaining the Forests of the Pacific Coast* offer new perspectives that recognize the complexity of the issues and the diversity of interests in forest politics A valuable contribution to the ongoing debate over forest policy on both sides of the Canada U S border these essays analyze the challenges facing forest policy makers and open the discussion up to those whose voices have not been heard before

The Oxford Handbook of U.S. Environmental Policy Sheldon Kamieniecki, Michael Kraft, 2013 Prior to the Nixon administration environmental policy in the United States was rudimentary at best Since then it has evolved into one of the primary concerns of governmental policy from the federal to the local level As scientific expertise on the environment rapidly developed Americans became more aware of the growing environmental crisis that surrounded them Practical solutions for mitigating various aspects of the crisis air pollution water pollution chemical waste dumping strip mining and later global warming

became politically popular and the government responded by gradually erecting a vast regulatory apparatus to address the issue Today politicians regard environmental policy as one of the most pressing issues they face The Obama administration has identified the renewable energy sector as a key driver of economic growth and Congress is in the process of passing a bill to reduce global warming that will be one of the most important environmental policy acts in decades The Oxford Handbook of U S Environmental Policy will be a state of the art work on all aspects of environmental policy in America Over the past half century America has been the world s leading emitter of global warming gases However environmental policy is not simply a national issue It is a global issue and the explosive growth of Asian countries like China and India mean that policy will have to be coordinated at the international level The book will therefore focus not only on the U S but on the increasing importance of global policies and issues on American regulatory efforts This is a topic that will only grow in importance in the coming years and this will serve as an authoritative guide to any scholar interested in the issue The State of the Earth Paul K. Conkin, 2006-12-15 An assessment of where we are where we re headed and what we need to do before it s too late Instructive well researched and easy to read John T Ackerman Strategic Studies Quarterly This era of staggering scientific and technological innovations with major changes in agriculture manufacturing commerce and communications seems to document unparalleled human achievement Yet when we examine the long term implications it becomes clear that the delicate environmental balance that sustains life on this planet is under serious threat and the past century may be remembered not as a period of great progress but as one marked by unrestrained consumption and failure to come close to a sustainable use of the earth s limited natural resources In The State of the Earth noted historian Paul K Conkin provides a comprehensive analysis of the many environmental hazards that humans must face in this still young century Our activities have threatened the survival of many plants and animals created scarcities in cultivatable soils and water needed for irrigation used up a large share of fossil fuels polluted air and water and most likely created conditions that will lead to devastating climate changes This is an invaluable resource for those who desire a broad yet thorough and scientifically informed introduction to present environmental challenges *Thinking About the Environment* Matthew Alan Cahn, Rory O'Brien, 2015-02-24 Underlying current controversies about environmental regulation are shared concerns divided interests and different ways of thinking about the earth and our proper relationship to it This book brings together writings on nature and environment that illuminate thought and action in this realm
