## **Focused Light Volume 1:**

**Essential Cell Biology Vol 1** John Davey, J. Mike Lord, 2003-06-05 Biological and medical research relies upon an integrated understanding of the molecules within cells and of the interactions between cells. This has imposed great demands on investigators. Being an expert in a relatively narrow area is no longer sufficient as many studies now require the use of a wide range of techniques to provide the necessary integration. A lack of familiarity with the experimental possibilities can make such diversification difficult to achieve. This two volume set of *Essential Cell Biology* is designed to help researchers overcome these problems. It has not been possible to include all of the techniques available in cell biology so the challenge was to identify those that might be most relevant to researchers who are new to this topic. We have tried to cover both traditional and more recent approaches. The theory and basic principles of each technique are described together with detailed protocols and advice for trouble shooting. Directions to more specialised techniques are also included. We hope the result inspires readers to experience the challenges and rewards of cell biology research for themselves and to contribute to the ongoing task of understanding the life of the cell. *Essential Cell Biology* volume 1 focuses on techniques for studying cell structure whilst volume 2 concentrates on understanding how the cell functions. Volume 1 details the essential background information and protocols for observing and understanding cell morphology and cell structure including for example investigations of nucleic acids, lipids and the cytoskeleton. This is the essential guide to cell biology for researchers new to the field.

*Nanophotonics: Integrating Photochemistry, Optics and Nano/Bio Materials Studies* Hiroshi Masuhara, Satoshi Kawata, 2004-10-09 *Nanophotonics: Integrating Photochemistry, Optics and Nano Bio Materials Studies* is an interdisciplinary research text on the application of nanophotonic physical chemical research and effects in devices for applications bridging a gap between conventional photophysics, photochemistry and nanoscience. *Nanophotonics* is a new wide research field related to photochemistry, photobiology and photophysics in nanodimension. Under the keywords of Photo and Nano, advanced scientific topics such as spectroscopic analysis of from single molecules to nanomaterials, nanofabrication by photons, detection of single bio molecules, near field optics and so forth are described here. The book is written by experts in the field of photochemistry, optics, material science, bioscience and so on for providing advanced knowledge of nanophotonics. *Nanophotonics* is a new research field that is not included in any conventional discipline but widely covers evolving and promising research subjects under the keywords of Light and Nanoscale. Topics included in the book are concerned with photodynamics from single molecules to nanoparticles, spectroscopy and imaging in nanodimensions, nanofabrication, synthesis, analysis and control of nano bio systems and so on. The book is finalized by topics of toward molecular nanophotonics. This is written primarily for graduate students, researchers and engineers.
