Foliated Bundles And Characteristic Classes:

   Foliated Bundles and Characteristic Classes Franz W. Kamber,Philippe Tondeur,2006-11-14   Foliated Bundles and Characteristic Classes Franz W. Kamber,Philippe Tondeur,2014-01-15   *Foliated bundles and characteristic classes* Franz Kamber,Philippe Tondeur,1975   Geometry of Foliations Philippe Tondeur,2012-12-06 The topics in this survey volume concern research done on the differential geom etry of foliations over the last few years After a discussion of the basic concepts in the theory of foliations in the first four chapters the subject is narrowed down to Riemannian foliations on closed manifolds beginning with Chapter 5 Following the discussion of the special case of flows in Chapter 6 Chapters 7 and 8 are de voted to Hodge theory for the transversal Laplacian and applications of the heat equation method to Riemannian foliations Chapter 9 on Lie foliations is a prepa ration for the statement of Molino s Structure Theorem for Riemannian foliations in Chapter 10 Some aspects of the spectral theory for Riemannian foliations are discussed in Chapter 11 Connes point of view of foliations as examples of non commutative spaces is briefly described in Chapter 12 Chapter 13 applies ideas of Riemannian foliation theory to an infinite dimensional context Aside from the list of references on Riemannian foliations items on this list are referred to in the text by we have included several appendices as follows Appendix A is a list of books and surveys on particular aspects of foliations Appendix B is a list of proceedings of conferences and symposia devoted partially or entirely to foliations Appendix C is a bibliography on foliations which attempts to be a reasonably complete list of papers and preprints on the subject of foliations up to 1995 and contains approximately 2500 titles   **Geometry of Characteristic Classes** Shigeyuki Morita,2001 Characteristic classes are central to the modern study of the topology and geometry of manifolds They were first introduced in topology where for instance they could be used to define obstructions to the existence of certain fiber bundles Characteristic classes were later defined via the Chern Weil theory using connections on vector bundles thus revealing their geometric side In the late 1960s new theories arose that described still finer structures Examples of the so called secondary characteristic classes came from Chern Simons invariants Gelfand Fuks cohomology and the characteristic classes of flat bundles The new techniques are particularly useful for the study of fiber bundles whose structure groups are not finite dimensional The theory of characteristic classes of surface bundles is perhaps the most developed Here the special geometry of surfaces allows one to connect this theory to the theory of moduli space of Riemann surfaces i e Teichm ller theory In this book Morita presents an introduction to the modern theories of characteristic classes   **Foliations, Geometry, and Topology** Nicolau Corção Saldanha,2009 Presents the proceedings of the conference on Foliations Geometry and Topology held August 6 10 2007 in Rio de Janeiro Brazil in honor of the 70th birthday of Paul Schweitzer The papers focus on the theory of foliations and related areas such as dynamical systems group actions on low dimensional manifolds and geometry of hypersurfaces   Differential Topology, Foliations, and Group Actions Paul A. Schweitzer,1994 This volume contains the proceedings of the Workshop on Topology held at the Pontificia Universidade

Catolica in Rio de Janeiro in January 1992 Bringing together about one hundred mathematicians from Brazil and around the world the workshop covered a variety of topics in differential and algebraic topology including group actions foliations low dimensional topology and connections to differential geometry The main concentration was on foliation theory but there was a lively exchange on other current topics in topology The volume contains an excellent list of open problems in foliation research prepared with the participation of some of the top world experts in this area Also presented here are two surveys on group actions finite group actions and rigidity theory for Anosov actions as well as an elementary survey of Thurston s geometric topology in dimensions 2 and 3 that would be accessible to advanced undergraduates and graduate students

Geometric Study Of Foliations - Proceedings Of The International Symposium/workshop Tadayoshi Mizutani,Kazuo Masuda,Shigenori Matsumoto,Takashi Inaba,Takashi Tsuboi,Yoshihiko Mitsumatsu,1994-12-16 This book covers recent topics in various aspects of foliation theory and its relation with other areas including dynamical systems C algebras index theory and low dimensional topology It contains survey articles by G Hector S Hurder and P Molino as well as more than 20 original papers by specialists who are currently most active in the field **Foliations on Riemannian Manifolds** Philippe Tondeur,2012-12-06 A first approximation to the idea of a foliation is a dynamical system and the resulting decomposition of a domain by its trajectories This is an idea that dates back to the beginning of the theory of differential equations i e the seventeenth century Towards the end of the nineteenth century Poincare developed methods for the study of global qualitative properties of solutions of dynamical systems in situations where explicit solution methods had failed He discovered that the study of the geometry of the space of trajectories of a dynamical system reveals complex phenomena He emphasized the qualitative nature of these phenomena thereby giving strong impetus to topological methods A second approximation is the idea of a foliation as a decomposition of a manifold into submanifolds all being of the same dimension Here the presence of singular submanifolds corresponding to the singularities in the case of a dynamical system is excluded This is the case we treat in this text but it is by no means a comprehensive analysis On the contrary many situations in mathematical physics most definitely require singular foliations for a proper modeling The global study of foliations in the spirit of Poincare was begun only in the 1940 s by Ehresmann and Reeb Connections, Curvature, and Cohomology Volume 3 Werner Greub,1976-02-19 Connections Curvature and Cohomology Volume 3 *Differential Geometrical Methods in Theoretical Physics* K. Bleuler,M. Encyclopaedia of Mathematics, Supplement III Michiel Hazewinkel,2007-11-23 This is the third supplementary volume to Kluwer s highly acclaimed twelve volume Encyclopaedia of Mathematics This additional volume contains nearly 500 new entries written by experts and covers developments and topics not included in the previous volumes These entries are arranged alphabetically throughout and a detailed index is included This supplementary volume enhances the existing

twelve volumes and together these thirteen volumes represent the most authoritative comprehensive and up to date Encyclopaedia of Mathematics available   Foliations: Geometry And Dynamics - Proceedings Of The Euroworkshop Lawrence Conlon,Remi Langevin,Takashi Tsuboi,Pawel Walczak,2002-02-01 This volume contains surveys and research articles regarding different aspects of the theory of foliation The main aspects concern the topology of foliations of low dimensional manifolds the geometry of foliated Riemannian manifolds and the dynamical properties of foliations Among the surveys are lecture notes devoted to the analysis of some operator algebras on foliated manifolds and the theory of confoliations objects defined recently by W Thurston and Y Eliashberg situated between foliations and contact structures Among the research articles one can find a detailed proof of an unpublished theorem due to Duminy concerning ends of leaves in exceptional minimal sets   **Differential Geometry of Foliations** B.L. Reinhart,2012-12-06 Whoever you are How can I but offer you divine leaves Walt Whitman The object of study in modern differential geometry is a manifold with a differ ential structure and usually some additional structure as well Thus one is given a topological space M and a family of homeomorphisms called coordinate sys tems between open subsets of the space and open subsets of a real vector space V It is supposed that where two domains overlap the images are related by a diffeomorphism called a coordinate transformation between open subsets of V M has associated with it a tangent bundle which is a vector bundle with fiber V and group the general linear group GL V The additional structures that occur include Riemannian metrics connections complex structures foliations and many more Frequently there is associated to the structure a reduction of the group of the tangent bundle to some subgroup G of GL V It is particularly pleasant if one can choose the coordinate systems so that the Jacobian matrices of the coordinate transformations belong to G A reduction to G is called a G structure which is called integrable or flat if the condition on the Jacobians is satisfied The strength of the integrability hypothesis is well illustrated by the case of the orthogonal group On An On structure is given by the choice of a Riemannian metric and therefore exists on every smooth manifold   **Encyclopedic Dictionary of Mathematics** Nihon Sūgakkai,1993 V 1 A N v 2 O Z Apendices and indexes   **Trends in Theory and Practice of Nonlinear Differential Equations** V. Lakshmikantham,2020-12-18 This book is based on an International Conference on Trends in Theory and Practice of Nonlinear Differential Equations held at The University of Texas at Arlington It aims to feature recent trends in theory and practice of nonlinear differential equations   *Differential Geometry: Geometry in Mathematical Physics and Related Topics* Robert Everist Greene,Shing-Tung Yau,1993 The second of three parts comprising Volume 54 the proceedings of the Summer Research Institute on Differential Geometry held at the University of California Los Angeles July 1990 ISBN for the set is 0 8218 1493 1 Among the subjects of Part 2 are gauge theory symplectic geometry complex ge   Handbook of Differential Geometry Franki J.E. Dillen,Leopold C.A. Verstraelen,2005-11-29 In the series of volumes which together will constitute the Handbook of Differential Geometry we try to give a rather complete survey of the field of differential geometry The different chapters will both deal with the

basic material of differential geometry and with research results old and recent All chapters are written by experts in the area and contain a large bibliography In this second volume a wide range of areas in the very broad field of differential geometry is discussed as there are Riemannian geometry Lorentzian geometry Finsler geometry symplectic geometry contact geometry complex geometry Lagrange geometry and the geometry of foliations Although this does not cover the whole of differential geometry the reader will be provided with an overview of some its most important areas Written by experts and covering recent research Extensive bibliography Dealing with a diverse range of areas Starting from the basics

   Foliations: Dynamics, Geometry and Topology Masayuki Asaoka,Aziz El Kacimi Alaoui,Steven Hurder,Ken Richardson,2014-10-07 This book is an introduction to several active research topics in Foliation Theory and its connections with other areas It contains expository lectures showing the diversity of ideas and methods converging in the study of foliations The lectures by Aziz El Kacimi Alaoui provide an introduction to Foliation Theory with emphasis on examples and transverse structures Steven Hurder s lectures apply ideas from smooth dynamical systems to develop useful concepts in the study of foliations limit sets and cycles for leaves leafwise geodesic flow transverse exponents Pesin Theory and hyperbolic parabolic and elliptic types of foliations The lectures by Masayuki Asaoka compute the leafwise cohomology of foliations given by actions of Lie groups and apply it to describe deformation of those actions In his lectures Ken Richardson studies the properties of transverse Dirac operators for Riemannian foliations and compact Lie group actions and explains a recently proved index formula Besides students and researchers of Foliation Theory this book will be interesting for mathematicians interested in the applications to foliations of subjects like Topology of Manifolds Differential Geometry Dynamics Cohomology or Global Analysis
