Fluorescence Spectroscopy Imaging And Probes New Tools In Chemical Physical And Life Sciences:

Fluorescence Spectroscopy, Imaging and Probes Ruud Kraayenhof, Antonie J.W.G. Visser, Hans C. Gerritsen, 2012-12-06 The application of fluorescence in drug discovery high throughout screenings in genomics and proteomics is and will be evidently successful The increased use of fluorescence techniques is greatly enhanced by the improved instrumentation pioneered by inventive scientists and now made available commercially by several high tech companies Moreover the design and development of many new molecular probes with higher selectivity for specific microenvironmental properties has stimulated many new researchers to employ fluorescence techniques for solving their problems Probably the most significant breakthrough in fluorescence is its use in detection of single molecules and even of their real time dynamics Also probing inside living cells has become a hot topic in the life sciences. This topic book reflects the updates of scientific progress. presented by frontline researchers Who's Who in Fluorescence 2004 Chris D. Geddes, Joseph R. Lakowicz, 2012-12-06 The Who s Who in Fluorescence 2003 volume was published in November 2002 It featured some 312 personal entries from fluorescence workers all over the world Initially we were unsure how useful the volume would be However it wasn t very long before we were inundated with requests for both bulk and personal orders In addition a significant number of copies were freely distributed at conference venues such as at the Biophysical Society meeting in San Antonio Texas March 2003 and at the Methods and Applications of Fluorescence Spectroscopy conference MAFS in Prague Czech Republic August 2003 where these two venues probably host the largest gathering of Fluorescence workers anywhere Even when we were initially taking e mail based submissions contributors were freely commenting on what a useful resource they saw the volume as being We subsequently shared these comments on the back outside cover of the 2003 volume As well as individual scientists supporting the 2003 volume the Fluorescence based Companies also played a key role where without their financial support the volume probably would not have the impact it currently has As such the Who s Who in Fluorescence 2003 has been a much bigger success than we ever envisaged Subsequently we now present the Who s Who in Fluorescence 2004 volume The new volume features 359 personal entries from 35 countries around the world In addition we have increased company support which should enable us to distribute more copies at targeted venues in 2004 Who's Who in Fluorescence 2005 Chris D. Geddes, Joseph R. Lakowicz, 2007-12-24 The Who s Who in Fluorescence 2005 is the 3r volume of the Who s who series The previous two volumes 2003 and 2004 have been very well received indeed with many copies being distributed around the world through conferences and workshops as well as through internet book sites In the last 2 years a great many of you have sent comments and suggestions we thank you all We have tried to accommodate many of these into the new 2005 volume This new 2005 volume features some 382 entries from no fewer than 32 countries an increase from 312 entries in the 2003 volume In addition we have a continued strong company support which will enable us to further disseminate the volume in 2005 In this regard we especially thank the instrumentation companies for their continued support where without their

finical contributions it is likely that the volume would not be the success it is today We have introduced a new author publication statistic into this volume the Author Impact Measure AIM number While voluntary this number is intended to reflect an author's progress in past years. The AIM number simply summates the impact number from the ISI database of Journals published in in that year multiplied by the frequency of those publications. From those who chose to participate we can see most impressive AIM numbers in some instances greater than 80 for an individual year. Reviews in Fluorescence 2016. Chris D. Geddes, 2017-02-13. Reviews in Fluorescence 2016 the tenth volume of the book serial from Springer serves as a comprehensive collection of current trends and emerging hot topics in the field of fluorescence and closely related disciplines. It summarizes the year's progress in fluorescence and its applications with authoritative reviews specialized enough to be attractive to professional researchers yet also appealing to the wider audience of scientists in related disciplines of fluorescence Reviews in Fluorescence offers an essential reference material for any research lab or company working in the fluorescence field and related areas All academics bench scientists and industry professionals wishing to take advantage of the latest and greatest in the continuously emerging field of fluorescence will find it an invaluable resource
