*Enterprise Architecture, Integration and Interoperability* Peter Bernus, Guy Doumeingts, Mark Fox, 2010-08-06 Enterprise Architecture Integration and Interoperability and the Networked enterprise have become the theme of many conferences in the past few years These conferences were organised by IFIP TC5 with the support of its two working groups WG 5.12 Architectures for Enterprise Integration and WG 5.8 Enterprise Interoperability both concerned with aspects of the topic how is it possible to architect and implement

businesses that are flexible and able to change to interact and use one another's services in a dynamic manner for the purpose of joint value creation. The original question of enterprise integration in the 1980s was how can we achieve and integrate information and material flow in the enterprise. Various methods and reference models were developed or proposed ranging from tightly integrated monolithic system architectures through cell-based manufacturing to on-demand interconnection of businesses to form virtual enterprises in response to market opportunities. Two camps have emerged in the endeavour to achieve the same goal, namely to achieve interoperability between businesses whereupon interoperability is the ability to exchange information in order to use one another's services or to jointly implement a service. One school of researchers addresses the technical aspects of creating dynamic and static interconnections between disparate businesses or parts thereof. **Annual Review of Communications**, 1992. *Electronic Business: Concepts, Methodologies, Tools, and Applications* Lee, In, 2008-12-31. The concept of integrated project delivery (IPD) has evolved as a result of the need for highly expert teams of people to collaborate to deliver extremely complex projects, to manage expectations about delivery speed, changes in governance standards, and to take advantage of and manage expectations raised by rapid advances in technology. All this demands effective change management. This is the first Handbook to contextualise and thematically explore the concept with an emphasis on rigorous practical and theoretical validation. The Handbook is divided into five sections, each with a focus on several interconnected themes, including: An introduction to IPD concepts; The foundational elements and characteristics of IPD; People, culture, and collaboration as key ingredients to successful and effective IPD; Technology and process aspects of relational contracting forms such as IPD; New and relevant perspectives to IPD that have received scant attention to date; Aspects and emerging issues that are rarely consciously considered in traditional project

delivery due to the commercial imperative that drives firms and client organisations The Handbook offers both discussions of these key themes and also in depth research into construction and other industry project procurement and delivery that spans decades In addition the Handbook presents best and better practice but also includes insights into cutting edge experimental developments in technology and practices where proof of concept is currently being developed into emerging practice Contributing authors in this Handbook collaborate with the co editors to draw together an integrated set of chapters that align to deliver a coherent narrative of the IPD concept It is an invaluable reference for practitioners and academics alike and useful as core course content for numerous degree programs of study and professional development courses
