GERT Modeling and Simulation Fundamentals and Applications Laurence J. Moore, Edward R. Clayton, 1976-06-01
Gret Modeling and Simulation Proceedings of the 1979 Academy of Marketing Science (AMS) Annual Conference Howard S. Gitlow, Edward W. Wheatley, 2015-05-28
This volume includes the full proceedings from the 1979 Academy of Marketing Science AMS Annual Conference held in Miami Florida. It provides a variety of quality research in the fields of marketing theory and practice in areas such as consumer behaviour, marketing management, marketing education, and international marketing among others. Founded in 1971, the Academy of Marketing Science is an international organization dedicated to promoting timely explorations of phenomena related to the science of marketing in theory, research, and practice. Among its services to members and the community at large, the Academy offers conferences, congresses, and symposia that attract delegates from around the world. Presentations from these events are published in this Proceedings series, which offers a comprehensive archive of volumes reflecting the evolution of the field. Volumes deliver cutting-edge research and insights complementing the Academy's flagship journals: the Journal of the Academy of Marketing Science (JAMS) and AMS Review. Volumes are edited by leading scholars and practitioners across a wide range of subject areas in marketing science: *Management Science*, *Operations Research*, and *Project Management*.
José Ramón San Cristóbal Mateo, 2016-05-06
Due to its societal and economic relevance, Project Management (PM) has become an important discipline and a concept critical to modern organizations. Public and private PM as an academic discipline is discussed both in Management Science and in Operations Research. Management Science tends to focus on quantitative tools and the soft skills necessary to manage projects successfully. Operations Research gives the essential scientific contribution to the success of project management through the development of models and algorithms. In Management Science, Operations Research, and Project Management, José Ramón San Cristóbal Mateo fills the gap between scientific research and the practical application of that research. Project managers need formal training in decision-making, but sometimes they do not have an in-depth knowledge of Operations Research or they lack the necessary theoretical background. This book, with its focus on the quantitative models of Operations Research and Management Science applied to Project Management, provides project managers with the tools and methods necessary to manage projects successfully. Project managers operate in a complex global environment in which numerous factors need to be considered, such as minimizing total project costs, meeting contracted dates, and ensuring that activities achieve certain quality levels. The focus here on the application of quantitative models of Operations Research and Management Science applied to Project Management provides them with the tools and methods necessary to make sound decisions.
An Introduction to Project Modeling and Planning Gündüz Ulusoy, Öncü Hazır, 2021-04-05
This textbook teaches the basic concepts and methods of project management but also explains how to convert them to useful results in practice. Project management offers a promising working area for theoretical and practical

applications and developing software and decision support systems DSS This book specifically focuses on project planning and control with an emphasis on mathematical modeling Models and algorithms establish a good starting point for students to study the relevant literature and support pursuing academic work in related fields The book provides an introduction to theoretical concepts and it also provides detailed explanations application examples and case studies that deal with real life problems The chapter topics include questions that underlie critical thinking interpretation analytics and making comparisons Learning outcomes are defined and the content of the book is structured following these goals Chapter 1 begins by introducing the basic concepts methods and processes of project management This Chapter constitutes the base for defining and modeling project management problems Chapter 2 explores the fundamentals of organizing and managing projects from an organization s perspective Issues related to project team formation the role of project managers and organization types are discussed Chapter 3 is devoted to project planning and network modeling of projects covering fundamental concepts such as project scope Work Breakdown Structure WBS Organizational Breakdown Structure OBS Cost Breakdown Structure CBS project network modeling activity duration and cost estimating activity based costing ABC data and knowledge management Chapter 4 introduces deterministic scheduling models which can be used in constructing the time schedules Models employing time based and finance based objectives are introduced The CPM is covered The unconstrained version of maximizing Net Present Value NPV is also treated here together with the case of time dependent cash flows Chapter 5 focuses on the time cost trade off problem explaining how to reduce the duration of some of the activities and therefore reduce the project duration at the expense of additional costs This topic is addressed for both continuous and discrete cases Chapter 6 discusses models and methods of scheduling under uncertain activity durations PERT is introduced for minimizing the expected project duration and extended to the PERT Costing method for minimizing the expected project cost Simulation is presented as another approach for dealing with the uncertainty in activity durations and costs To demonstrate the use of the PERT a case study on constructing an earthquake resistant residential house is presented Classifications of resource and schedule types are given in Chapter 7 and exact and heuristic solution procedures for the single and multi mode resource constrained project scheduling problem RCPSP are presented The objective of maximizing NPV under resource constraints is addressed and the capital constrained project scheduling model is introduced In Chapter 8 resource leveling and further resource management problems are introduced Total adjustment cost and resource availability cost problems are introduced Various exact models are investigated A heuristic solution procedure for the resource leveling problem is presented in detail Also resource portfolio management policies and the resource portfolio management problem are discussed A case study on resource leveling dealing with the annual audit project of a major corporation is presented Project contract types and payment schedules constitute the topics of Chapter 9 Contracts are legal documents reflecting the results of some form of client contractor negotiations and sometimes of a bidding process which

deserve closer attention Identification and allocation of risk in contracts project control issues disputes and resolution management are further topics covered in this Chapter A bidding model is presented to investigate client contractor negotiations and the bidding process from different aspects Chapter 10 focuses on processes and methods for project monitoring and control Earned Value Management is studied to measure the project performance throughout the life of a project and to estimate the expected project time and cost based on the current status of the project How to incorporate inflation into the analysis is presented In Chapter 11 qualitative and quantitative techniques including decision trees simulation and software applications are introduced Risk phases are defined and building a risk register is addressed An example risk breakdown structure is presented The design of risk management processes is introduced and risk response planning strategies are discussed At the end of the Chapter the quantitative risk analysis is demonstrated at the hand of a team discussion case study Chapter 12 covers several models and approaches dealing with various stochastic aspects of the decision environment Stochastic models generation of robust schedules use of reactive and fuzzy approaches are presented Sensitivity and scenario analysis are introduced Also simulation analysis which is widely used to analyze the impacts of uncertainty on project goals is presented Chapter 13 addresses repetitive projects that involve the production or construction of similar units in batches such as railway cars or residential houses Particularly in the construction industry repetitive projects represent a large portion of the work accomplished in this sector of the economy A case study on the 50 km section of a motorway project is used for demonstrating the handling of repetitive project management How best to select one or more of a set of candidate projects to maintain a project portfolio is an important problem for project based organizations with limited resources The project selection problem is inherently a multi objective problem and is treated as such in Chapter 14 Several models and solution techniques are introduced A multi objective multi period project selection and scheduling model is presented A case study that addresses a project portfolio selection and scheduling problem for the construction of a set of dams in a region is presented Finally Chapter 15 discusses three promising research areas in project management in detail i Sustainability and Project Management ii Project Management in the Era of Big Data and iii the Fourth Industrial Revolution and the New Age Project Management We elaborate on the importance of sustainability in project management practices discuss how developments in data analytics might impact project life cycle management and speculate how the infinite possibilities of the Fourth Industrial Revolution and the new technologies will transform project management practices

Project Engineering Anastasia Pagnoni, 2012-12-06 Manufacturing processes scientific experiments research programs tax collection systems are all endeavors once born as projects Project engineering is the application of science to the development and analysis of project plans and to the supervision of their realization This book is a unified treatise on the technology of project planning and execution It provides a systematic understanding of the different methodological approaches to the development and supervision of project plans Readers are given a technical introduction to the main

methodologies such as graphs activity networks CPM PERT GERT and Petri nets and given guidance as to when and why to apply one technique rather than another The book deliberately emphasizes those techniques which are particularly suitable to exploiting the power of computation and therefore supplies a solid platform for applying computer tools to the analysis and control of projects The book also introduces ODM a methodology based on the theory of fuzzy sets for supporting plan execution supervisors in making operational choices The book is self contained It is designed to serve professionals and students in the fields of systems engineering computer aided planning and decision support systems

Introduction to Simulation and SLAM II A. Alan B. Pritsker, 1986-07-24 Combines the presentation of a simulation language and the background material required for performing simulation projects Provides a detailed description of SLAM II a Simulation Language for Alternative Modeling II Expanded edition offers more information on applications of simulation a newer treatment of network modeling and analysis a chapter on the simulation of manufacturing systems and a discussion and presentation of simulation support systems which includes database concepts and advanced graphical features Numerous examples and illustrations

Asset Maintenance Engineering Methodologies José Manuel Torres Farinha, 2018-04-17 The book aims to be reading for asset maintenance management in a perspective of whole life cycle of any type of physical asset It deals with acquisition management including econometric models to evaluate its life cycle and the maintenance policies to adopt during its life until withdrawal It also covers vital areas such as EAM CMMS systems and its integration with the many technologies that are used to aid condition monitoring and the internet of things to improve maintenance management and to increase equipment availability This will equip readers with new management methodologies their requisites and its importance to the improvement of corporate competitiveness Key Features Presents life cycle analysis in asset management Attribution of tools to improve the life cycle of equipment Provides assistance on the diagnosis of the maintenance state Presentation of the state of the art of technology to aid maintenance Explores integration of EAM CMMS systems with internet of things
