But there's power in truth and truth demands to be heard. This is her story. Raw. Honest. Unfiltered. To those who judge. If you're ready to point fingers, this book isn't for you. But if you're prepared to dive deep into a soul shaped by fire, heartbreak, and the will to rise, turn the page. Because life isn't perfect. Neither is she. And that's what makes this story unforgettable. What if everything you knew about education was wrong? David Didau, 2015-06-10. If you feel a bit cross at the presumption of some oik daring to suggest everything you know about education might be wrong, please take it with a pinch of salt. What if everything you knew about education was wrong is just a title. Of course you probably think a great many things that aren't wrong. The aim of the book is to help you murder your darlings. David Didau will question your most deeply held assumptions about teaching and learning, expose them to the fiery eye of reason, and see if they can still walk in a straight line after the experience. It seems reasonable to suggest that only if a theory or approach can withstand the fiercest scrutiny should it be encouraged in classrooms. David makes no apologies for this. Why wouldn't you be sceptical of what you're told and what you think you know? As educated professionals, we ought to strive to assemble a more accurate, informed, or at least considered understanding of the world around us. Here David shares with you some tools to help you question your assumptions and assist you in picking through what you believe. He will stew findings from the shiny white laboratories of cognitive psychology, stir in a generous dash of classroom research, and serve up a side order of experience and observation. Whether you spit it out or lap it up, matters not. If you come out the other end having vigorously and violently disagreed with him, you'll at least have had to think hard about what you believe. The book draws on research from the field of cognitive science to expertly analyse some of the unexamined meta-beliefs in education. In Part 1, 'Why we're wrong', David dismantles what we think we know, examining cognitive traps and biases, assumptions, gut feelings, and the problem of evidence. Part 2 delves deeper, through the threshold looking at progress, liminality, and threshold concepts, the science of learning, and the difference between novices and experts. In Part 3, David asks us the question 'What could we do differently?' and offers some considered insights into spacing and interleaving, the testing effect, the generation effect, reducing feedback, and why difficult is desirable. While Part 4 challenges us to consider 'What else might we be getting wrong?' cogitating formative assessment, lesson observation, grit, and growth, differentiation, praise, motivation, and creativity.
