Wide Area 2D/3D Imaging Benjamin Langmann, 2014-06-26 Imaging technology is an important research area and it is widely utilized in a growing number of disciplines ranging from gaming, robotics, and automation to medicine. In the last decade, 3D imaging became popular, mainly driven by the introduction of novel 3D cameras and measuring devices. These cameras are usually limited to indoor scenes with relatively low distances. Benjamin Langmann introduces medium and long range 2D/3D cameras to overcome these limitations. He reports measurement results for these devices and studies their characteristic behavior. In order to facilitate the application of these cameras, common algorithms are adapted to the 2D/3D data and new approaches for standard computer vision tasks are introduced.
