Spiers, 2000-02-24 The proliferation of weapons of mass destruction has continued to give cause for concern even after the end of the Cold War This book analyses how the prospects for proliferation have changed since the 1990s particularly in light of the Gulf War and the UN inspections of Iraq It will examine the new pattern of incentives and disincentives for proliferation the utility of these weapons at state and sub state levels and their implications for arms control and international security **Towards A Nuclear-weapon-free World - Proceedings Of The Forty-fifth Pugwash Conference On Science And World Affairs** Joseph Rotblat, Michiji Konuma, 1997-07-01 In this volume scientists write on the desirability and feasibility of eliminating nuclear weapons including reflections 50 years after the destruction of Hiroshima and Nagasaki by atomic bombs The following topics are discussed strategies for preventing the proliferation of weapons of mass destruction ways and means to monitor and control the arms trade the need for global governance specific aspects of security in the Asia Pacific region and interactions between the problems of meeting the world's energy demand reducing environmental pollution and promoting sustainable development **Combating Weapons of Mass Destruction** Nathan E. Busch, Daniel Joyner, 2009-01-01 The spread of weapons of mass destruction poses one of the greatest threats to international peace and security in modern times the specter of nuclear chemical and biological weapons looms over relations among many countries The September 11 tragedy and other terrorist attacks have been painful warnings about gaps in nonproliferation policies and regimes specifically with regard to nonstate actors In this volume experts in nonproliferation studies examine challenges faced by the international community and propose directions for national and international policy making and lawmaking The first group of essays outlines the primary threats posed by WMD proliferation and terrorism Essays in the second section analyze existing treaties and other normative regimes including the Nuclear Non Proliferation Treaty and the Chemical Weapons and Biological Weapons Conventions and recommend ways to address the challenges to their effectiveness Essays in part three examine the shift some states have made away from nonproliferation treaties and regimes toward more forceful and proactive policies of counterproliferation such as the Proliferation Security Initiative which coordinates efforts to search and seize suspect shipments of WMD related materials [The Myth of the Poor Man's Atomic Bomb and the Politics of Proliferation](#) Biejan Poor Toulabi, 2021-04-07 Preventing the spread of weapons of mass destruction has been an important policy priority in the

past decades This dissertation questions the prevailing view that chemical and biological weapons CBWs are a poor man s atomic bomb that are particularly attractive to developing countries that cannot acquire nuclear weapons The study shows that vague unverifiable and inflated threat assessments from US government sources have played an important role in sustaining this myth A unique dataset of CBW development programs in the period 1946 2010 demonstrates that significantly fewer countries have had CBW programs than often thought and that especially Third World countries have been incorrectly accused of pursuing or possessing CBWs

Innovation, Dual Use, and Security Jonathan B.

Tucker,2012-03-30 A framework for assessing the security risks of emerging dual use technologies and devising tailored governance strategies is proposed and applied to contemporary case studies Recent advances in disciplines such as biotechnology nanotechnology and neuropharmacology entail a dual use dilemma because they promise benefits for human health and welfare yet pose the risk of misuse for hostile purposes The emerging field of synthetic genomics for example can produce custom DNA molecules for life saving drugs but also makes possible the creation of deadly viral agents for biological warfare or terrorism The challenge for policymakers is to prevent the misuse of these new technologies without forgoing their benefits Innovation Dual Use and Security offers a systematic approach for managing the dual use dilemma The book presents a decision framework for assessing the security risks of emerging technologies and fashioning governance strategies to manage those risks This framework is applied to fourteen contemporary case studies including synthetic genomics DNA shuffling and directed evolution combinatorial chemistry protein engineering immunological modulation and aerosol vaccines The book also draws useful lessons from two historical cases the development of the V series nerve agents in Britain and the use and misuse of LSD by the U S Army and the CIA Innovation Dual Use and Security offers a comprehensive multifaceted introduction to the challenges of governing dual use technologies in an era of rapid innovation The book will be of interest to government officials and other practitioners as well as to students and scholars in security studies science and technology studies biology and chemistry

The Weapons State David Mutimer,2000 The proliferation of all kinds of weapons is a focal point for international security This work shows how both the language used to talk about

weapons proliferation and the practices adopted to respond to it serve to define the problem in ways that promote policy responses doomed to failure

To Supply Or to Deny Michael David Beck, Richard T. Cupitt, Scott A. Jones, Seema Galhaut, 2003-01-01 Weapons of mass destruction WMD are not necessarily acquired as entire systems They are often assembled from parts and materials many of which are dual use i e of both commercial and military utility Often suppliers of these components do not ask who their customers are or inquire about the intended application This has for a long time been the Achilles heel of well intentioned nonproliferation conventions The answer lies in more stringent export controls of weapons related technologies In this eye opening collection of essays sponsored by the Center for International Trade and Security at the University of Georgia USA a group of outstanding experts in the nonproliferation field report on the efforts of five leading supplier countries the United States France Russia China and India to implement export controls on weapons and sensitive technologies used for producing WMD The book is both reassuring and alarming in its very precise survey and analysis of export control regimes At most national levels regulation is rapidly making firms more accountable and more industries are routinely implementing internal compliance programs However these advances are in a neck to neck race with intangible methods of transferring information corporations with no national allegiance and competition among international suppliers Based on in depth research each of the contributors spent considerable time conducting interviews with government officials and other policy experts observing policy making and implementation and gathering empirical data this detailed and thought provoking book will be of great value to all concerned with security objectives for the twenty first century
