A Computer Oriented Single-fingerprint Identification System J. H. Wegstein, 1968 A procedure is described for computing a set of numerical descriptors that identify a single fingerprint The procedure starts with the X and Y coordinates and the individual directions of the minutiae ridge endings and bifurcations of a fingerprint impression Sets of descriptors are computed

corresponding to groups or constellations of these minutiae Descriptors corresponding to various fingerprint impressions are stored on magnetic tape A fragment of a fingerprint impression such as occurs in a latent fingerprint may also be used A second computer program reads the descriptors corresponding to two different fingerprint impressions from magnetic tape A score is computed that indicates how well the two impressions match Preliminary experimental results suggest that this procedure might be suitable as a basis for a single fingerprint classification system Author *Fingerprints and Other Ridge Skin Impressions* Christophe Champod, Chris J. Lennard, Pierre Margot, Milutin Stoilovic, 2017-12-19 Since its publication the first edition of *Fingerprints and Other Ridge Skin Impressions* has become a classic in the field This second edition is completely updated focusing on the latest technology and techniques including current detection procedures applicable processing and analysis methods all while incorporating the expansive growth of literature on the topic since the publication of the original edition Forensic science has been challenged in recent years as a result of errors courts and other scientists contesting verdicts and changes of a fundamental nature related to previous claims of infallibility and absolute individualization As such these factors represent a fundamental change in the way training identifying and reporting should be conducted This book addresses these questions with a clear viewpoint as to where the profession and ridge skin identification in particular must go and what efforts and research will help develop the field over the next several years The second edition introduces several new topics including Discussion of ACE V and research results from ACE V studies Computerized marking systems to help examiners produce reports New probabilistic models and decision theories about ridge skin evidence interpretation introducing Bayesnet tools Fundamental understanding of ridge mark detection techniques with the introduction of new aspects such as nanotechnology immunology and hyperspectral imaging Overview of reagent preparation and application Chapters cover all aspects of the subject including the formation of friction ridges on the skin the deposition of latent marks ridge skin mark identification the detection and enhancement of such marks as well the recording of fingerprint evidence The book serves as an essential reference for practitioners working in the field of fingermark detection and identification as well as legal and police professionals and anyone studying forensic science with a view to understanding current thoughts and challenges in dactyloscopy

Pattern Recognition, Machine Intelligence and Biometrics Patrick S. P. Wang, 2012-02-13 *Pattern Recognition Machine Intelligence and Biometrics* covers the most recent developments in Pattern Recognition and its applications using artificial intelligence technologies within an increasingly critical field It covers topics such as image analysis and fingerprint recognition facial expressions and emotions handwriting and signatures iris recognition hand palm gestures and multimodal based research The applications span many fields from engineering scientific studies and experiments to biomedical and diagnostic applications to personal identification and homeland security In addition computer modeling and simulations of human behaviors are addressed in this collection of 31 chapters by top ranked professionals from all over the world in the field of PR AI Biometrics The book is intended for
