Regenerating British Columbia's Forests R. Parish, C. M. Johnson, G. Montgomery, A. Vyse, R. A. Willis, D. Winston, D.P. Lavender, 2011-11-01 Reforestation is a subject vital to the economy of British Columbia which depends heavily on its forests a valuable but expendable resource This book provides silviculturalists with a broad reference to the science and technology of reforestation in the Canadian province that forms the single most diverse forest region in North America The work combines for the first time both experiences recorded from practical reforestation projects and the results of scientific investigations The chapters of Regenerating British Columbia s Forests were compiled and reviewed by experts in each field of discussion Topics include the physiological bases for seedling vigour and the interaction of reforestation with seedling physiology the ecology of British Columbia s bioclimatic zones and the role of ecological site classification the application of financial analyses to reforestation decisions current technology in manual mechanical and chemical site preparation and in the use of fire to prepare planting sites recent progress in tree genetics and breeding and its relevance to the production of tree propagules nursery technology methodology in planting evaluation techniques of plantation release and the role of insects disease and small mammals and birds in the reforestation process Regenerating British Columbia s Forests will assist those responsible for planning reforestation projects to reach informed decisions and will challenge them to consider primarily the biological factors basic to reforestation success rather than short term costs and production technology Although its main audience is practising foresters and forestry students of British Columbia the text will be of considerable

interest to foresters in other parts of Canada the United States and Europe who manage reforestation *Diseases of Pacific Coast Conifers* Robert F. Scharpf,1993 **Infectious Forest Diseases** Paolo Gonthier,Giovanni Nicolotti,2013 Today forest health and the management of threats towards it are attracting more and more attention on a global scale This book covers the most recent advances in the management of forest diseases including the epidemiology and infection biology of forest pathogens and forest protection based on integrated pest and disease management approaches A comprehensive range of diseases caused by viruses bacteria fungi and other organisms are discussed in detail making this book essential reading for forest managers and extension specialists Written by recognized authorities in the subject of forest health this book also provides a wealth of information useful for researchers and lecturers of forest pathology and ecology *A Bibliography for Quercus Garryana and Other Geographically Associated and Botanically Related Oaks* Constance A. Harrington,2002

Field Guide to Insects and Diseases of Arizona and New Mexico Forests ,2006 **Endophytes of Forest Trees** Anna Maria Pirttilä,A. Carolin Frank,2011-07-11 Found in every plant species the diversity of endophytic micro organisms can be extremely high within different plant organs and tissue types In trees their ecological roles with respect to host tree can vary from latent pathogens or saprophytes to neutral commensalists and mutualists Given their high diversity and their bio active nature endophytes are currently being associated with a role in tree health against insect herbivores and fungal pathogens as well as improving tree properties in phytoremediation Meanwhile there is increasing interest in the potential of some tree endophytes as new sources of drug compounds The first book on tree endophytes in several years and containing contributions from leading authors in the field this book provides an important reference text for professional researchers and advanced students
