Special Scientific Report ,1958 The Cnidaria, Past, Present and Future Stefano Goffredo, Zvy Dubinsky, 2016-09-07

This volume presents a broad panorama of the current status of research of invertebrate animals considered belonging to the phylum Cnidaria such as hydra jellyfish sea anemone and coral In this book the Cnidarians are traced from the Earth's primordial oceans to their response to the warming and acidifying oceans Due to the role of corals in the carbon and calcium cycles various aspects of cnidarian calcification are discussed The relation of the Cnidaria with Mankind is approached in accordance with the Editors philosophy of bridging the artificial schism between science arts and Humanities Cnidarians encounters with humans result in a broad spectrum of medical emergencies that are reviewed The final section of the volume is devoted to the role of Hydra and Medusa in mythology and art **Hearings** United States. on Interior and Insular Affairs, *Water Resources Development in New York* , **Marine Geochemistry** Roy Chester, 2012-12-06 The past two or three decades have seen many important advances in our knowledge of the chemistry physics geology and biology of the oceans It has also become apparent that in order to understand the manner in which the oceans work as a chemical system it is necessary to use a framework which takes account of these interdisciplinary advances Marine geochemistry has been written in response to the need for a single state of the art text that addresses the subject of treating the sea water sediment and rock reservoirs as a unified system In taking this approach a process orientated framework has been adopted in which the emphasis is placed on identifying key processes operating within the unified ocean In doing this particular attention has been paid to making the text accessible to students from all disciplines in such a way that future advances can readily be understood I would like to express my thanks to those people who have helped with the writing of this volume In particular I wish to put on record my sincere appreciation of extremely helpful suggestions made by Professor John Edmond FRS In addition I thank Dr S Rowlett for his comments on the sections covering the geochemistry of oceanic sediments and Dr G Wolff for his invaluable advice on the organic geochemistry of biota water and sediments It is a great pleasure to acknowledge the help of Dr K J T **Nuclear Science Abstracts** ,1961 **Sc, Y, La-Lu Rare Earth**

Elements Bärbel Sarbas, Wolfgang Töpper, 2013-11-11 The present volume Rare Earth Elements A 6b describes in its first part the origin mode of occurrence and behavior of Y and or RE elements in the hydrosphere and atmosphere Separately for marine and non marine environments surface subsurface mineral and thermal waters the behavior of RE including Y in the hydrosphere comprises especially the relationship between elemental composition and the chemistry of water and the processes acting during migration removal and precipitation are outlined the influence of biological material is mentioned Behavior of RE in the atmosphere involves mainly transport regional differences and temporal variations as well as removal by precipitation the anthropogenic influence is only outlined The second part of this volume treats partly in a more summary manner the cosmo and geochemical cycles and the balance of Y and or RE elements The relationship between geodynamic

position and type of magmatism as well as the geochemical variations in the geospheres especially mantle and crust of the earth are described in greater detail

Geochemistry of Organic Matter in the Ocean Evgenii A. Romankevich, 2013-11-11 My work Geochemistry of organic matter in the ocean first appeared in Russian in 1978 Since then much progress has been made in the exploration of various forms of organic matter in the ocean dissolved colloidal organic matter suspended in particles and that contained in bottom sediments and in interstitial waters The appropriate evidence is found in hundreds of articles and several review works such as Andersen 1977 Biogéochimie de la matière organique à l'interface eau-sédiment marin 1980 Duursma and Dawson 1981 A great amount of new information has been obtained in the Soviet Union's scientific institutions on the composition and distribution in natural waters and bottom sediments of organic matter and its separate components playing a crucial role in the formation of the chemical and biological structure of the ocean and its productivity in the biogeochemistry of the elements and geochemistry of organic matter in the Earth's sedimentary cover The areas of exploration have expanded over the past four and a half years to embrace many new little known regions including the Arctic seas In contrast to the three preceding decades the research has been focused on investigating the existing forms the distribution and accumulation of organic matter in near continental oceanic zones between land and sea and in river estuaries

Atmosphere-Ocean Dynamics Adrian Gill, 1982-12-13 A systematic unifying approach to the dynamics of the ocean and atmosphere is given in this book with emphasis on the larger scale motions from a few kilometers to global scale The foundations of the subject the equations of state and dynamical equations are covered in some detail so that students with training in mathematics should find it a self-contained text Knowledge of fluid mechanics is helpful but not essential Simple mathematical models are used to demonstrate the fundamental dynamical principles with plentiful illustrations from field and laboratory

Heavy Metals in the Marine Environment Robert W. Furness,2018-01-18 The aim of this volume is to draw together state of the art reviews of knowledge on levels of heavy metals in marine environments particularly in marine animals the dynamic processes in these systems toxic effects and threats presented by heavy metals in foods of marine origin All heavy metals whether biologically essential or not have the potential to be toxic to organisms at a threshold bioavailability Such threshold concentrations vary between metals between species and with the physicochemical characteristics of the medium some like copper being particularly toxic even though essential in trace amounts Responses of animals to metals in their medium or food depend to a large extent on the ability of species to regulate levels attained in their tissues Higher animals have the capacity to regulate levels of many metals while marine invertebrates can regulate some within certain limits Where animals cannot regulate physiological levels of metals an alternative strategy is to detoxify and store metals in relatively harmless forms Knowledge of the manner in which animals deal with potentially toxic concentrations of heavy metals is of fundamental importance in the assessment of metal pollution by analysis of metal levels in biological samples The interaction of heavy metals with biological materials is a key theme running through this volume Toxic effects may be reflected at the individual population or ecosystem level affecting species composition and production levels or may be of direct dietary significance to man The global cycling of metals through the marine environment is crucially affected by biological processes **The Bulletin of the Beach Erosion Board** United States.
